

TEJASWINI NAKIREKANTI

Plainsboro, NJ | +1 (385) 371-0597 | tnakirekanti@gmail.com | [LinkedIn](#)

EDUCATION

Master of Science in Computer Science, George Mason University, VA, USA	August 2022 – May 2024
Bachelor of Technology in Computer Science, Jawaharlal Nehru Technological University, India	July 2017 – May 2021

TECHNICAL SKILLS

Languages: Python, Java, R.
Databases: MySQL, Postgres, TSQL, Oracle, Mongo DB, NoSQL, PL/SQL.
Cloud Technologies: Azure, AWS, GCP, Snowflake, Docker, Kubernetes.
Big Data Technologies: Apache Spark, Airflow, MapReduce, HDFS, Kafka, Alteryx, Databricks, Jupyter, Git, Jenkins (CI/CD), MLOps, Excel.
Visualization and Reporting Tools: PowerBI (DAX functions), Tableau.

CERTIFICATIONS

- Microsoft Certified - Azure Data Engineer Associate ([Credential](#)) and Azure Data Scientist Associate ([Credential](#)).

PROFESSIONAL EXPERIENCE

Data Analysis and Engineering Intern, Munich Re, NJ, USA	May 2024 – Present
- Developed scalable data pipelines with robust quality checks for claims data using Databricks and Azure Data Factory, automating workflows and improving operational efficiency by 25%. - Transformed unstructured XML policy submission files into structured tables in the Data Lake, by defining schemas and flattening nested structures to uncover seasonal trends in policy premiums. - Published PowerBI reports using DAX to visualize KPIs derived from text mining and NLP, uncovering 20% of previously unidentified claims and enabling data-driven decisions through collaboration with the stakeholders. - Set up and managed visualization reports for diverse use cases, ensuring effective collaboration and access by publishing and organizing reports with a focus on data governance. - Developed a testing framework with PyTest to evaluate monthly reports against diverse test cases, achieving over 90% test coverage. - Involved in building CI/CD pipelines using Azure DevOps to automate data flow, deploy data products, and manage version control in an agile environment, ensuring efficient and reliable delivery.	
Data Analyst - Graduate Assistant, George Mason University, VA	August 2023 – May 2024
- Created comprehensive charts, graphs, and dashboards in Tableau and PowerBI to effectively convey complex data insights. - Implemented advanced Excel functions and formulas for data manipulation and statistical analysis, facilitating deeper insights. - Identified and addressed various biases, such as temporal bias in datasets, and applied solutions to correct and enhance data accuracy. - Utilized Python libraries for data wrangling and cleaning, conducting statistical analysis to uncover key correlations in the data. - Written advanced SQL queries to retrieve and merge data from different sources ensuring data quality checks, supporting report building and analysis.	
Data Engineer, Tata Consultancy Services, India	July 2021 – July 2022
- Collaborated with stakeholders to gather and analyze requirements for a classification model designed to predict system crashes and optimizing PC performance. - Built and optimized data pipelines to process petabytes of data, with Airflow DAGs orchestrating batch workflows to support distributed analytics and ensure seamless data processing. - Engineered over 20 tables in Databricks, leveraging Spark user-defined functions and PySpark SQL for data transformations, resulting in a 30% reduction in the feature space and enhanced data processing efficiency. - Designed and implemented data models using dimensional modeling and Slowly Changing Dimensions (SCDs), optimizing query performance for analytics. - Extracted SHAP values and visualized the top 10 contributing features, presenting the results in a PowerBI dashboard for comprehensive analysis and insights to uncover root cause. - Utilized Kanban boards and GIT for project management and version control within an agile environment.	
Data Analyst Intern, TechnoGen, Inc, India	May 2019 – June 2021
- Worked with database engineers to design, develop customized database solutions with Hadoop and Oracle SQL. - Developed SQL scripts for data validation and error handling mechanisms, reducing entry errors by 15% to improve user experience. - Improved query performance on historical data by implementing data partitioning and bucketing strategies on Hive tables stored in HDFS, enabling faster ad-hoc queries. - Developed Python code for performance and memory management using various tools and frameworks, enhancing the entire SDLC. - Implemented a ETL data pipeline solution leveraging Apache NiFi to streamline the data ingestion process from multiple sources. - Generated Tableau reports to uncover insights and patterns within the datasets, utilizing advanced data visualization techniques to visualize findings, facilitating data-driven decision-making processes.	

ACHIEVEMENTS

Winner in Patriot Hacks 2023 Hackathon at GMU.
Interactive Patriot Event Finder
- Created interactive dashboard using Power Tools for Tableau (CBI Studio) to build custom maps with latitude, longitude, and shape data for GMU buildings. - Integrated web-scraped event data into Tableau by scheduling data ingestion through AWS Lambda, S3 and Cloud Watch.
