

Siri Maddala

maddala3@illinois.edu • (716) 259-5905 • [LinkedIn](#)

Analytics professional with extensive experience in data modelling, data warehousing, ETL, and data visualization using technologies such as Qlik Sense, Alteryx, Python, SQL, and Advanced Excel with strong project management skills. I pursued my master's in Business Analytics focusing on data strategy and advanced analytical techniques to assist in strategic decision-making. This intensive course is equipping me with the expertise needed to excel as a business analyst.

Education

University of Illinois at Urbana-Champaign (UIUC)

Aug 2023 – May 2024

Master of Business Analytics

CGPA: 4.0/4.0

Course work includes Machine learning (optimization, regression, classification, regularization, decision trees, neural networks and reinforcement learning, ML pipelines using R and Python), Statistics (hypothesis testing, probability distributions, tests of significance), causal analytics (A/B testing, randomized experiments, natural experiments), SQL (Enterprise database management, aggregations, joins, CTEs, window functions, RDBMS normalization), APIs (GraphQL, REST), AWS (S3, Lambda, EventBridge, EC2, Glue, Athena, RDS, Redshift), PySpark, Text Analytics

National Institute of Technology, Nagpur (NIT Nagpur)

Jul 2016 – May 2020

Bachelor of Technology, Chemical Engineering

CGPA: 3.4/4.0

Professional Experience

Horizon Hobby (Capstone Project)

Champaign, IL

Data Analyst

Aug 2023 – May 2024

- Managed a team of five students in a comprehensive analysis of Horizon Hobby's wholesale customer data. We executed advanced feature engineering and applied clustering techniques to identify distinct customer segments. This segmentation provided critical insights that significantly enhanced targeted marketing strategies, leading to improved customer engagement and business outcomes.

Novartis (Full-time)

Hyderabad, India

Business Analyst

Sep 2021 – Jul 2023

- Analyzed market for a specific brand and country in terms of sales, field force channels of marketing and competitive landscape by developing efficient Alteryx workflows and assisted data science team to perform market mix modelling to determine ROI of each promotional channel and to optimize marketing spend.
- Developed an enterprise level reporting platform by integrating 20+ databases for oncology business unit of medical affairs and modelling data using SQL and Qlik Sense to streamline decision making for 1000+ users by bringing everything at one place. Implemented innovative solutions using Power Automate, VBA and Python to enhance process efficiency.
- Accomplished in agile project management including gathering requirements, project scoping, project planning, project execution, documentation, leading scrum calls and efficiently handled complex projects end to end involving multiple clients and achieved 100% customer satisfaction score.
- Utilized SQL, Alteryx, and Qlik Sense to create insightful dashboards that adhere to best practices in data storytelling. These tools enabled effective communication of key business insights, supporting strategic decision-making and enhancing operational efficiencies.

Associate Business Analyst

Aug 2020 – Sep 2021

- Developed an integrated platform using Qlik Sense and Alteryx to visualize multi-channel customer engagement and performance metrics using data sources such as Veeva CRM, SFMC, sales and third-party email reports to improve marketing effectiveness across channels.
- Designed an automated dashboard to track website performance metrics of a disease awareness website such as sessions, average time, traffic channel, conversions, and paid media channel metrics such as cost per click enhancing the efficiency of digital marketing strategies.

Projects

Impact of ChatGPT launch on Stack Overflow (Python, Tableau): Extracted data using the Stack Overflow API and performed hypothesis testing, regression discontinuity and cosine similarity analysis to measure the causal impact on engagement, quantified by changes in the number of questions, answers, and views before and after the launch of ChatGPT and visualized using Tableau

Predicting Mortgage Loan Delinquency (PySpark): Created an end-to-end machine learning pipeline to classify mortgage loans as delinquent or non-delinquent, utilizing the Home Credit Default Risk dataset from Kaggle. Conducted data preparation, exploratory data analysis, and feature engineering to handle missing values and created a comprehensive feature set. Implemented and evaluated Logistic Regression and Gradient Boosted Trees models.

Prediction of Stock Prices of Magnificent 7 Stocks (AWS): Extracted data from Alpha Vantage API and created a pipeline using AWS services such as S3, Glue, SageMaker, EventBridge, Lambda to predict next day stock price based on the historical stock data.

Prediction of property prices based on historical properties (R): Cleaned data, normalized data, selected features from 50+ property attributes and explored ML techniques such as random forest, lasso regression to identify the algorithm which can accurately predict property prices based on the features of properties.

Skills

Technical Skills: SQL, Python (Numpy, Pandas), R, Qlik Sense, Alteryx, Knime, Tensorflow, Sklearn, PySpark, AWS, Advanced Excel (Pivot tables, Vlookup, VBA), Power Automate, Power Apps

Other Skills: Machine Learning, Statistical Modelling, Project Management, Project Planning, Stakeholder Management

Certifications: Microsoft certified Azure AI Engineer associate, Microsoft certified Power BI data analyst Associate
