Professional Summary

Successfully completed Software Engineer with 5 years of experience, specializing in web applications, backend infrastructure and proficiency with cloud computing and the Spring Framework. renowned for concentrating on meeting customer needs by producing outstanding results. acknowledged for having excellent teaching and mentoring skills. extremely effective working in a variety of international, diversified enterprises at all levels. adept at producing high-caliber software and working in hectic settings. Committed to continuous learning and staying updated with industry trends. Collaborative team player with a track record of exceeding expectations.

CORE COMPETENCIES

Spring Framework | RESTful Microservices | Cloud Technologies (AWS) | Java Development | Unit Testing | Frontend Development (Angular) | CI/CD Pipelines | Agile Methodologies | Load Balancing & Service Discovery | Version Control (GitHub)

TECHNICAL SKILLS

Languages	Java EE, JavaScript, Shell Scripts, Java SE, HTML, CSS, Python, C#
Web Technologies	JDBC, JMS, apache Kafka and TypeScript
IDE tools	Eclipse, IntelliJ, STS
Database systems	PostgreSQL, MongoDB, MySQL and NoSQL, Oracle
Cloud Platforms	AWS, PCF
Build Tools	Ant, Gradle, Maven
Testing Tools	Junit, Mockito, Power Mock, Cucumber

WORK EXPERIENCE

NBC Universal

Austin, TX

Java Developer

Aug 2023 – Till Now

- Participates in the entire software development life cycle, starting with analysis and continuing through the phases of integration, testing, design, and development.
- Constructing a web application with the Spring Boot framework and utilizing Spring MVC controllers for navigation controllers are customized using Spring MVC annotations and configuration files.
- Applying Dependency Injection with Spring Core Annotations for REST APIs, use Spring DI and Spring MVC for microservices, use Spring Boot.
- Utilizing fundamental Java features such as collections and multi-threading to incorporate back-end operations.
- Participated in micro service design packaging of ORM entities.
- Preserve Kafka clusters across several cloud platforms, including Google Cloud Platform and Amazon Web Services.
- Used AWS elements for application deployment, such as S3 and EC2.
- Used Spring REST and MVC to develop Restful Microservices, and Swagger for manual testing and documentation of Microservices.
- Skilled in SOAP message creation and handling, ensuring efficient request/response processing and data transformation.
- Developed J-Unit, Mockito, and Docker unit and integration tests for pre-existing micro services.
- Employed GIT for version control.
- Produced and applied Web API techniques for Entity Framework database operations (CRUD).

Hetero HealthCare

Dallas,Tx

Software Engineer

Feb 2021 - Dec 2021

- Implementing back-end functionality using Core Java notions like collections and multi-threading.
- Converting a cloud-based Micro Services application to a spring-based application.
- Developed and employed Entity Framework Web API methods for database operations (CRUD).
- Proficient in Java Spring Boot for backend development and AngularJS/ReactJS for frontend. Created RESTful APIs for seamless frontend-backend communication's.
- Developing HTML5, CSS3, JavaScript, and JQuery while employing GIT for version control.
- Participating in user acceptability testing (UAT) and integration system testing.
- Configured Prometheus and Grafana for Kubernetes cluster monitoring.
- Implemented XML-based integration solutions for seamless communication between diverse systems using SOAP and WSDL standards.
- using the Java API Documentation Generator (Java doc) to create documentation at each stage of the project.
- Implemented CI/CD pipelines for efficient deployment with Jenkins and GitLab.
- Construct reliable web services by employing the Sling Architecture and putting POST and GET techniques to use.
- Designed and developed the application using Java & J2EE design patterns and the coding requirements.
- The application is deployed to the Apache Tomcat server.

Versatile Software

Hyderabad,India.

Software Engineer

Jan 2018 – Dec 2020

- Took part in the requirements gathering, design, analysis, and code development phases of the application's Software Development Life Cycle (SDLC) utilizing Agile approach.
- Used Spring Boot for micro services, Spring Security, Spring MVC, and Spring Core Annotations for REST APIs.
- Assigned a UI architecture for an internal web application and collaborated with designers to create conceptual mockups and wireframes.
- Completed end-to-end application development using front-end technologies such as HTML5, CSS3, ReactJS, Redux, unit testing with Jest, and Enzyme.
- Jenkins was used to deploy code.
- Made use of the JAX-RS API to implement RESTful Web Services. Web services have been developed to facilitate RESTful HTTP communication between apps.
- Created SQL and PL/SQL database queries to access, modify, and update Oracle databases.
- Setting up the Apache Tomcat server as the development environment so that developers may test their integration.
- Engaged in asking business questions, receiving responses from them, correcting bugs, and using JIRA for tracking. examined the code to make sure Java coding guidelines were followed.
- Using Jenkins, Docker, and Maven to create build, deployment, maintenance, and associated task scripts.
- Attending weekly status meetings with the development team to talk about the state of the project, address problems, and handle escalated concerns.

EDUCATION:

Masters of Science, University of North Texas

Jan 2022 – Dec 2023

Major: Business Analytics , Information Technology

Bachelors of Engineering, Osmania University

August 2015 – 2019

Major : Computer Science
