

PAUL SAVELLANO

Dublin, CA | (925) 413-5427 | paulsavellano@gmail.com | linkedin.com/in/paul-savellano/

PROFESSIONAL SUMMARY

- Senior full-stack (C#/.NET, Angular) developer with a 10+ years of experience in building and maintaining robust, efficient and reliable applications across industries such as banking, financial services and logistics.
- Demonstrated success in leading development teams, effectively utilizing Agile practices to consistently deliver projects on schedule and within budget.

TECHNICAL SKILLS

- **Modern Distributed Technologies:** .NET, C#, Gemini AI, Azure, Kubernetes, Docker, Command Query Responsibility Segregation (CQRS), DotNetCore.CAP, MediatR, Service Bus, Event Hub, Kafka, Split.io, Dapper, Refit, SignalR, Angular, Blazor, Selenium, Serilog, Grafana, Behavior-Driven Development (BDD), SpecFlow, Gherkin, xUnit, Apigee, Channel Secure, Ping Identity
- **Traditional 3-Tier Technologies:** .NET, C#, Model View Controller (MVC), Web API, ADO.NET, Entity Framework, Angular, AngularJS, JavaScript, TypeScript, jQuery, HTML, CSS, Bootstrap, Log4net, NUnit, Internet Information Services (IIS)
- **Databases:** SQL Server, Snowflake, MongoDB
- **Environments:** Azure Platform-as-a-Service (PaaS), Azure Kubernetes Service (AKS), Azure Container Registry (ACR), Pivotal Cloud Foundry (PCF), Pivotal Kubernetes Service (PKS), On-premises Virtual Machines (VM)
- **DevOps:** Terraform, YAML, Helm
- **Methodologies:** Agile, Scrum, Kanban, Waterfall

RELEVANT WORK EXPERIENCE

MyCarrier (September 2022 – January 2025)

- **Technologies:** .NET, C#, Gemini AI, Azure, Kubernetes, Docker, WebJobs, Service Bus, Event Hub, CQRS, DotNetCore.CAP, MediatR, Microservices, Entity Framework, Dapper, Refit, SignalR, Angular, TypeScript, Split.io, Serilog, Grafana, SQL Server, MongoDB, Snowflake, YAML, Terraform, Helm, xUnit

MyCarrier Accessorials API (September 2023 – January 2025)

- Full stack developer for the initial API release.
- **MyCarrier Accessorials API** leverages Google Gemini AI to describe shipping locations and suggest shipping accessorials. This is part of a broader effort to transition MyCarrier towards a domain-driven architecture.
- Implemented event-driven architecture by separating read and write operations using CQRS.
- Leveraged DotNetCore.CAP to implement the Outbox pattern, ensuring reliable message publication to the Service Bus.
- Developed with .NET microservices, Service Bus, and MongoDB.
- Deployed in Docker containers orchestrated by Kubernetes via AKS and ACR.

MyCarrier Full Truckload (September 2023 – January 2025)

- Full stack developer for multiple application releases.
- **MyCarrier Full Truckload** is an application within the MyCarrier platform that facilitates direct connections between shippers and carriers for quoting and dispatching full truckload shipments. This is part of a broader effort to transition MyCarrier towards a domain-driven architecture.
- Employed CQRS for efficiency and the Outbox pattern for reliability.
- Developed with an Angular UI, .NET microservices, Service Bus and MongoDB.
- Deployed in Docker containers orchestrated by AKS and ACR.

MyCarrier (September 2022 – January 2025)

- Full stack developer for multiple application releases.
- **MyCarrier** is an application that allows shippers to directly connect with carriers for all shipping needs, including checking rates and availability, quoting, dispatching, tracking, and reporting.
- Developed with an Angular UI and .NET microservices. The APIs connect to stored procedures in the SQL Server database using Entity Framework and Dapper.
- Hosted on Azure PaaS infrastructure.

Change Data Tracking (January 2023 – May 2023)

- Configured Azure WebJobs and developed SQL Server Stored Procedures along with Snowflake User-defined Functions for the initial application release.
- **Change Data Tracking** extracts and transfers data from SQL Server to Snowflake Data Warehouse.
- Hosted on Azure PaaS infrastructure.

Wells Fargo Auto (March 2017 – September 2022)

- **Technologies:** .NET, C#, CQRS, MVC, Web API, ADO.NET, Blazor, Angular, AngularJS, TypeScript, JavaScript, jQuery, HTML, CSS, Bootstrap, MongoDB, Kafka, Kubernetes, Docker, PCF, PKS, Log4net, Serilog, Splunk, Selenium, SpecFlow, Gherkin, xUnit, NUnit, Apigee, Ping Identity, Channel Secure, IIS

Auto Servicing (ASER) -Letter of Guaranty (January 2022 – September 2022)

- Full stack developer for the initial application release.
- **Letter of Guaranty** is an internal web application that generates letters for insurance companies when a vehicle is deemed a total loss due to theft or an accident. It is part of a comprehensive set of tools in the ASER suite.
- Developed with a Blazor UI, .NET microservices, Kafka queue, and MongoDB database, utilizing CQRS.
- Deployed in Docker containers, orchestrated by Kubernetes via PKS.

ASER - Repossession & Redemption (January 2022 – September 2022)

- Developed integration tests for the initial application release.
- **Repossession & Redemption** is an internal web application that tracks payments made on repossessed vehicles. This application is part of a comprehensive set of tools in the ASER suite.
- Implemented Behavior-Driven Development (BDD) testing framework using Gherkin and SpecFlow.
- Hosted on Pivotal Cloud Foundry (PCF) infrastructure.

Integrated Desktop - Workflow (June 2018 – December 2021)

- Technical Lead for multiple application releases.
- **Workflow** is an internal web application utilized by various business lines to set up and maintain business processes. It functions as a ticketing system that tracks predefined tasks to execute these processes. Predefined tasks are configured using XML columns in SQL Server tables.
- Developed with an Angular UI, Web API REST service, and SQL Server database, utilizing the MVC architecture.
- Hosted on on-premises VMs.

eServices (March 2017 – December 2018)

- Full stack developer, overseeing deployment activities for multiple application releases.
- **eServices** is an external self-service website for managing auto loans. It enables customers to make payments, check balances, request payoff quotes, manage contact information, sign up for notifications, and download documents.
- Developed with an AngularJS UI, Web API REST services, and SQL Server database, utilizing the MVC architecture.
- Hosted on on-premises VMs.

EDUCATION

- **Master of Science in Financial Analysis** | University of San Francisco - San Francisco, CA
- **Bachelor of Science in Computer Applications** | De La Salle University - Manila, Philippines
