

PROFESSIONAL SUMMARY:

- **Around 5+ years of** experience in Analysis, Design, Development, Maintenance, and Deployment of enterprise web applications with full stack development based on **JAVA/J2EE Technologies**.
- Proficient in using **RDBMS** concepts and worked with **MySQL, Oracle** and **Postgresql** databases strong front-end **UI** development skills using scripting languages **HTML5, CSS3, JSP, Java 8, jQuery, Ajax**.
- Experience working with Docker components like **Docker Engine, creating Docker images, Compose, Docker Registry**.
- Worked on Web Application Development with **Spring 4/5** Framework like **Spring MVC, Spring Boot, Spring Security** and **Maven**.
- Expertise in estimations, analysis, design, development, testing, maintenance, performance tuning and deployment of internet, e-commerce and client-server applications using **Java 8, Servlets, JSP, JavaBeans, JDBC, Spring, Hibernate, AJAX, JavaScript**.
- Experience in the developing User Interface (UI) **SOAP** Applications and professional web applications using **HTML 4.0/5, CSS3, JavaScript, Angular6/7, jQuery, JSF, ReactJS, NodeJS, AJAX, JSON, XHTML** and **XML**.
- Extensive experience working with **Django, Flask** frameworks.
- Strong experience on various development environments like **Eclipse, IntelliJ, Netbeans** and good expertise with unit testing using **Junit**.
- Experience with cloud computing environment like **AWS (Amazon Web Services)** knowledge and Work experience in **AngularJS**
- Used **Amazon Web Services (AWS)** a secure cloud services platform, offering compute power, database storage, content delivery and other functionality to help businesses scale and grow.
- Experienced in Spring Framework modules such as **Spring MVC, IOC, AOP, JDBC,JPA, Spring Boot, Spring Microservices, Spring REST, Spring Eureka, Spring Netflix**
- Good knowledge on working with **Amazon Web Services (AWS)** like EC2, S3, Amazon SimpleDB, Amazon RDS, Amazon Elastic Load Balancing, Amazon SQS, **AWS** Identity and access management, AWS Cloud Watch, Amazon EBS and Amazon CloudFront.
- Experience of Database design in Oracle 11g/SQL Server/**MongoDB** query-based programming and PL/SQL procedure programming and proficient in Database programming using JDBC and SQL
- Created **REST and Rest API** are deployed in the web server and consumed the web service from third party software
- Extensive ETL testing and Automation experience on Amazon Web Services platform and Expertise in ETL tools such as Redpoint Data Management,Redpoint Interactions,IBM Data Stage and Neolane
- Experience in making the pipelines using **Openshift and Kubernetes** for the Microservices.
- Implemented a metrics collection mechanism for the server by utilizing **Apache Kafka 2.5.0** to stream server-side events.
- Experience in Continuous Integration tools such Jenkins and Bamboo and Experience with **CI/CD tools** (Jenkins, GitLab, Ansible)
- Extensively Used Jenkins as Continuous Integration tools to deploy the **Spring Boot, Micro Services to Pivotal Cloud Foundry (PCF)** using build pack.
- Worked with various Frameworks like **Struts 1.2, Struts 2.1, Spring MVC, Spring Security, JSP 1.1, JSP 2.1, APIs** and **MicroServices**.
- Expert in T SQL DDL/DML, perform most of the SQL Server Enterprise Manager and Management Studio functionality using T-SQL Scripts and Batches. Worked on Amazon Web Services, Office 365 and **Google Cloud** issues.
- Professional experience in using Core Technologies **Java, J2EE, Core Java, React, React Native, Servlets, Node JS, JSP, Custom tags, JDBC, Spring, Spring Boot, JavaBeans, JavaScript, JNDI, JTA, Web Services, Microservices, SOA, Bootstrap** framework, jQuery, Ajax.
- Proficient in **debugging** and **troubleshooting** software issues along with **validation and testing** experience with application server technologies like **Tomcat**.
- Knowledge on Full **Software Development Life Cycle (SDLC)** including requirements gathering, analysis, design, coding, testing, integration and documentation. Also had knowledge on **agile** development and waterfall methodologies.
- Proficient in **extracting, transforming and loading** of data using **SQL Server** along with writing **complex SQL Queries and Stored procedures**.

- Good understanding of network protocols such as **TCP/IP, HTTP** extensively worked on Python libraries like **Pandas, Tabula-py, PyPDF2**.
- Highly motivated team player with the ability to work independently and adapt quickly to new and emerging technologies as well as strong interpersonal and organizational skills.

TECHNICAL SKILLS:

Languages	Java (J2SE 1.8/1.7/1.6/1.5, JEE 6/5), J2EE, JSP2.1/2.0/1.2, Servlet 2.x/3.x, Python, C++
Frameworks	Spring 5.0/4.0, Spring MVC, Spring Boot, Spring Cloud, Struts, Hibernate 4.x/3.x
Web Technologies	HTML 5/DHTML, XHTML1.1, JavaScript, jQuery, Angular 6/7, NodeJS, ReactJS, CSS3, XML1.0, Bootstrap, AngularJS
Web/Application Servers	Tomcat 7.x/6.x, Web Logic 10.3/9.2/8.1/7.0, IBM WebSphere6.x/5.x/4.x, JBoss 7.0, JAX-WS (SOAP), JAX-RS (REST, REST API), WSDL
AWS	EC2, RDS, S3, ELB, EBS
Build Tools	Pivotal Cloud Foundry (PCF), Google cloud, Azure, CI/CD, Docker, Kubernetes
Messaging Services	JMS, Active MQ, Rabbit MQ, Confidential MQ, Apache Kafka, JAX RS, JAX: WS, Apache CXF, Axis, Jersey
Databases	MYSQL, SQL Server, Oracle 11g, MongoDB, Sybase and Cassandra
Version Control	GIT, CVS, Clear case, SVN, Maven, JIRA
Methodologies	Agile Methodology, Waterfall Methodology
Other Tools	Ant 1.7, Maven 3.x, Gradle 3.x, Jenkins (CI), Rational Rose, Log4J,

PROFESSIONAL SUMMARY:

HMS, Irving, TX
Full Stack Java Developer

August 2022 – Till date

Responsibilities:

- Involved in developing Web content management systems (Web Portal design and development), responsive web applications and web components, by **HTML5, CSS3** and **JavaScript / jQuery**.
- Involved in design & implementation of the Katerra internal system web app including several modules using **Angular 7+, Express.JS, MongoDB** and **Visual Studio Co**.
- Used Streams and Lambda expressions available as part of **Java 8** to store and process the data involved in developing effective web application using **Angular 7.0, and Bootstrap**
- Developed **Server less** application using **API Gateway, AWS S3** and **Lambda** which was written in **Java, Python**.
- Designed and developed **Splunk** Dashboards created **Splunk** Scheduled Alerts & Reports Used **Docker** for creating **Docker images** for launching containers on **AWS**.
- Developed User guide for **AWS SAM & Splunk** guide from developer point of view built a **VPC**, established the site-to-site VPN connection between **Splunk and AWS**.
- Was responsible for design of the Oracle database model using Power Designer 16.
- Used **Django REST** framework and integrated new and existing API's endpoints.
- AWS Deploying, managing, operating scalable, highly available, and fault tolerant systems. Also implemented and managed continuous delivery systems and methodologies on **AWS**.
- Integrating local with **Splunk Dev** and **AWS** application with the **Splunk Cloud** used IAM for creating roles, users, groups to provide additional **security** to AWS account and its resources.
- Implemented domain name service (**DNS**) through **route 53** to have highly available and scalable applications.
- Used Redpoint Interaction to generate the automatic emails to the various customers on daily and weekly basis.
- Implementing application-level persistence using **Hibernate** and **spring 5.0** managed build results in **Jenkins** and deployed using workflows.
- Implemented **REST API** Gateway to provide syncing between the **couch base LTE and Couchbase Server** maintaining

performance and setting up monitoring using **Cloud Watch for Security purpose**.

- Worked on **Rest web services** for backend services, used **Couchbase** for database services validated **Jenkins** pipeline for cross deployments of **AWS** Lambda Functions
- Created **snapshots** to take backups of the volumes and images to store **Kubernetes** launch configurations of the **EC2** instances.
- Used **Redpoint** to identify errors and potential issues that may arise during the development process
- Provisioning infrastructure for the microservice. **Creating SGS, S3 buckets, Alb, ec2**, autoscaling groups, and launch configurations through the Jenkins pipeline.
- Worked on **CI/CD** tool **Jenkins** to automate the build process from version control tool into testing and production environment.
- Created DB Links to interact with other Oracle databases in the distributed database system.
- Creating a platform as infrastructure with **AWS (EC2, RDS and ELB)** used **Jenkins** to run the automated deployments.
- Deployed Spring Boot based micro services Docker container using **Amazon EC2** container services and using AWS admin console microservices A and **Hibernate/JPA framework** is used to save/retrieve the data in the backend.
- Developed **CI/CD** system with Jenkins on **Kubernetes container** environment utilizing Kubernetes
- Created **AWS S3 buckets**, performed folder management in each bucket, managed cloud trail logs and objects within each bucket.
- Developed UI using **HTML, JavaScript, AJAX** and **JQuery** for interactive cross browser functionality and complex user interface
- Most notable clients include Technology Crossover Ventures, Redpoint Ventures, VantagePoint Venture capital and Jafco Ventures.
- Coded web services to expose Oracle DB Functions and Stored procedures.
- Used Hibernate and Spring Data JPA to connect with the database and worked on databases, **PostgreSQL**.
- Designed and developed **Micro Services** business components using **Spring Boot** with **Apache Kafka** to stream data across multiple systems.
- Use **Spring MVC** Cloud Stream template for the asynchronous exchange of critical business data and events among **J2EE** components.
- Developing unit and integration tests for existing **micro services** using **J-Unit**, and **Mockito** used **Tomcat** as an application server to deploy JAR files.

Environment: Java 8, J2EE, Spring Boot, Spring MVC, AWS, Splunk Enterprise, JIRA, MongoDB, Kubernetes, SOAP, Apache Kafka, REST, REST API, Micro Services, Angular 7.0, IntelliJ, Hibernate, CI/CD, Confluence, Jenkins, Git, Docker, Redpoint, Jira, Microsoft Teams.

TCS, India

Jan 2019 – June 2021

Full Stack Java Developer

Responsibilities:

- Involved in development and architecture review meetings, code reviews, analyse service profile requirements in confluence, retrospective meetings and support on staging and production environment.
- Designed and developed **Micro services** using **Jersey framework (Restful web services)**, **Spring 4.0**, and **SOAP** used **Apache Kafka** to push stuff on a queue for the service that needs the stuff to be done asynchronously.
- Developed prototype and project layout skeletons using **ReactJS**, **JQuery**, **HTML5**, and **CSS3** build stable **ReactJS** components and stand-alone functions to be added to any future pages.
- Implemented **Kafka** producer and consumer applications on **Kafka** cluster setup with help of Zookeeper custom **Validator** developed in Hilton such as **@NotNull**, **@Not Empty**, **@Pattern** initially used **Hibernate Validator**.
- Deployed Spring Boot based **micro services Docker container** using **Amazon EC2** container services.
- Experience on AWS cloud services like EC2, S3, RDS, ELB, and EBS in both installing and configuring.
- Participated in development of a well responsive Single page application **CCA** using **Angular 6.0** framework, **JavaScript** in conjunction with **HTML5**, **CSS3** Standards.
- Developed web-based controllers using **Java**, **J2EE**, **Web Services (REST)**, **MVC 4.0/5.0** framework (**Spring MVC 2.5.2**), and **MySQL**
- Used redpoint tool in Java for debugging code
- Created DB Links to interact with other Oracle databases in the distributed database system.

- Responding to production issues, daily application maintenance, incident resolution and responsible for process improvement, application monitoring strategy, and overall application stability.
- Create clusters in **Google Cloud Platform(GCP)** and manage the **clusters** using **Kubernetes(k8s)** used **Hibernate Mappings, HQL, Query, Criteria, Lazy Loading Transactions** and **Locking's** documentation for all the components which is included in **React-Bootstrap** page.
- Used Redpoint to build resilient, fault tolerant systems by providing features such as automatic failover, load balancing.
- Used **NoSQL** database and **MySQL** database, created **DAO's** using **JDBI** and Couch base for interacting with Database building scalable distributed data solutions using Datastax **Cassandra**
- Worked extensively on Snowflake for the applet recursions logging framework **Log4J** and **Slf4j** is used for log messages implemented **log4j** for application logging and to troubleshoot issues in debug mode.
- Deployed build and deployment scripts using **ANT** and **MAVEN** as build tools in **Jenkins** to move from one environment to other environments.
- Worked on **REST API** generating the Web services classes by using Service Oriented Architecture (**SOA**) and maven modified the UI screens created by web designer using **HTML5, JSP, CSS3, AngularJS** (for an instance)
- Developed application using **Spring Boot** and configured beans using **Spring MVC**, creation of **Hibernate** mapping files and generation of database schema.
- Using Redpoint reduced development time while maintaining performance levels similar to traditional approaches without sacrificing scalability or reliability
- Used **Jira** Atlassian tools like Bamboo for Continuous Integration and deployment, Bitbucket, Confluence and **Splunk** for analysing Logs.
- Programmed Oracle Triggers, stored procedures and Cron tasks.
- Used JUnit for **unit testing** and log4j for logging. Used **Jenkins** for **CI/CD**.
- All the functionality is implemented using **Spring IO / Spring Boot and Hibernate ORM**. Implemented Java EE components using **Spring MVC, Spring IOC**, spring transactions and spring security modules.
- Involved in **Cassandra** Cluster environment administration that includes commissioning and decommissioning nodes experience in **Cloud** Services.
- Have knowledge on partition of **Kafka** messages and setting up the replication factors in **Kafka** Cluster refactored the code and rewrote the validation logic (initially in Perl) of travel partners using **Java**.
- Handled all the client-side validations, slide show, hide and show controls, drop-down menus and tab navigation using **HTML5, Java 7** and JQUERY for serialization and deserialization using Jackson framework and Sax parser.
- Daily stand up meetings with client team and offshore to document the project status. Implemented several design patterns like Singleton, Factory.

Environment: Java 7, J2EE, (REST, REST API, SOAP), Micro services, Spring 4.0, Spring MVC, Spring Boot, Hibernate, JDBI, MySQL database, Google cloud, Redpoint, Angular 6.0, AngularJS, HTML5, JQuery, ReactJS, Docker, Kafka, Junit, Log4j, Slf4j, H2k, Kubernetes, Jersey, SoapUI Servlets, GIT, Splunk, Maven.

Soft The Next, India
Java Developer

Jan 2018 – Dec 2018

Responsibilities:

- Participated in Analysis and Requirement phase of **SDLC** for this project by gathering client requirements implemented Service layer using **Java** and **Spring Boot**.
- Used **Java 8**, core java and **OOPS** concept to write our code on backend and used **GitHub** for version control therefore have good experience with Git commands.
- Designed the application (client product) based on client – customized architecture, a 3-tier architecture comprising Presentation, Service and Data Access Layers.
- Accomplished client-side validations using **JavaScript**. Developed various generic **JavaScript** functions used for validations.
- Developed Microservices using **Spring Boot, Netflix OSS, Spring Cloud** and deploying to AWS Cloud.
- Developing Java based micro-services which provide **REST API endpoints** and services using **Spring Boot** and PostgreSQL database as RDBMS storage.
- Developed the functionalities using **Waterfall Methodology** used **Hibernate 3.0** to fetch Data from Database DB2 and process it in Service layer.

- Implemented **Spring Boot** services in combination with **Angular2** as a front end to form a **Micro service** Oriented application
- Created and injected **Spring services, Spring controllers and DAOs** to achieve **dependency injection** and to wire objects of business classes.
- Developed business objects using POJOs and data access layer using **Hibernate framework** used **Spring MVC** Inheritance to **SOAP** develop beans from **J2EE** already developed parent beans.
- Used **Spring** config server for centralized **REST** configuration and Splunk for centralized logging. Used Concourse and Jenkins for **MicroServices** deployment
- Implemented **SOA** to develop **REST API** Web services using Apache Axis created **DDL and DML SQL** scripts for creation of database objects.
- Created new tables, **PL/SQL** stored procedures, functions, views, indexes and constraints, triggers and required SQL tuning to reduce the response time in the application.
- Worked closely **with the QA team and fixed QA bugs** as well as production issues with a quick turnaround time using logical and physical data models to practice concepts of normalization and RDBMS.
- Used confluence page to document all the workflow.
- Used IntelliJ **to develop and debug application code Maven** building tools for creating JAR files to be deployed in application servers.
- Scheduled the daily status meetings within the **offshore team** and also used to communicate the same to the onsite team accordingly resolved defects by fixing it as it appeared in the project.

Environment: J2EE, Java 8, Spring Boot, Spring MVC, SOAP, REST, REST API, Micro Services, Hibernate 3.x, Angular 2, CSS3, Web services, Java Beans, JavaScript, DB2, IntelliJ, Apache Tomcat 6.0, Waterfall Methodology, GitHub, Confluence page.

Education Details :

Bachelors in Pharmacy from Kakatiya University 2014- 2018

Masters in Information Science:- University of North Texas 2021- 2023 May
