

Professional Summary

Experienced Senior Data Engineer with over 4 years of demonstrated success in designing, building, and optimizing robust data pipelines and scalable solutions using Python, SQL, Apache Spark, and Kafka. Proven ability to lead data-driven decision-making processes and manage large-scale data infrastructures. Expertise in implementing advanced analytics and machine learning models to drive business insights and operational efficiencies. Adept at leveraging cloud technologies and data warehousing solutions to enhance data accessibility and performance across diverse industries.

Experience

Teladoc Health, Lewisville, TX (Data Engineer)

Jan 2023 - Present

- Spearheaded the design and optimization of data pipelines using Apache Spark and Airflow, resulting in improved data processing speed and efficiency.
- Led a successful AWS Redshift migration initiative, achieving a 30% cost reduction while enhancing data retrieval capabilities.
- Integrated diverse data sources into centralized data warehouses, optimizing data accessibility and usability across the organization.
- Implemented Kafka for real-time data streaming, significantly improving data timeliness and availability for critical business processes.
- Achieved a 40% performance enhancement in data pipelines through continuous tuning and optimization efforts.

AI Dash, Bangalore, India (Machine Learning Engineer)

Jul 2021 - Jul 2022

- Developed and deployed advanced ML models using Python, TensorFlow, and PyTorch, driving insights and actionable intelligence from data.
- Conducted comprehensive data preprocessing and feature engineering, optimizing model performance and predictive accuracy.
- Utilized Docker and Kubernetes for efficient model deployment, ensuring scalability and reliability in production environments.
- Applied NLP techniques for sentiment analysis and Named Entity Recognition (NER), contributing to enhanced customer sentiment insights.
- Developed computer vision models for image classification tasks, leveraging deep learning frameworks to achieve superior accuracy.

Techiefrogs, Hyderabad, India (Data Analyst)

Dec 2020 - Jun 2021

- Engineered robust data pipelines using Python and SQL, enabling efficient data processing and analysis for business stakeholders.
- Designed optimized database schemas and executed performance tuning strategies in MySQL, improving query efficiency by 30%.
- Automated data workflows using Apache Airflow, streamlining data processing and reducing manual intervention.
- Developed interactive data visualization dashboards using Tableau and Power BI, facilitating data-driven decision-making across departments.

Skills

Data Engineering: Apache Spark, Kafka, Airflow

Big Data: Hadoop, Hive, Pig

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB

Programming: Python, SQL, PySpark

Data Warehousing: Snowflake, AWS Redshift, Azure Data Lake

Visualization: Tableau, Power BI

Education

University at Buffalo, New York *Master of Science, Data Science*

Aug 2022 - Present

Birla Institute of Technology, Mesra *Bachelor of Engineering, Mechanical*

Jul 2017 - Aug 2021
