

Jiefan Yu

Frontend Developer

408-414-6409 | derrickyu98@gmail.com | Los Angeles, CA

Professional Summary

- With over **5 years** of dedicated experience as a Front-end web developer, I've honed my skills in crafting exceptional user experiences for Internet and Intranet applications. My expertise spans a wide array of technologies, including **HTML/HTML5, XML, DHTML, CSS/CSS3, SASS, LESS, JavaScript, React JS, Redux, ES6, Web pack, Flex, jQuery, JSON, Node.js, Ajax, and JQUERY Bootstrap**.
- Throughout my career, I've been involved in all phases of the Software Development Life Cycle (SDLC), from meticulous Requirement Analysis to Implementation and Maintenance. I have a profound familiarity with **Agile and SCRUM** methodologies, ensuring that projects are executed efficiently and collaboratively.
- One of my standout capabilities lies in developing **single-page applications (SPAs)** that deliver seamless and engaging user experiences.
- I've also excelled in customizing **CSS** frameworks like **Bootstrap** and Foundation using **CSS** pre-processors such as **LESS** or **SASS**, along with Compass.
- In addition to my skills in **CSS**, I possess an expert touch in implementing **Bootstrap plugins**, crafting interactive elements like carousels, accordions, and modal windows.
- My proficiency extends to analyzing the Document Object Model (DOM), encompassing **DOM Layout, DOM Functions, and JavaScript** functions, while ensuring cross-browser compatibility using tools like **Fire Bug** and **Developer Tool Bar**.
- **React JS** is another area of my specialization, enabling me to construct **SPAs** with finesse. I've created custom reusable **React** Component Libraries, leveraging **Redux** architecture to optimize website performance.
- I have hands-on experience utilizing **Redux-Thunk** and **Sagas** as middleware to manage asynchronous events and side effects effectively.
- My expertise in **React** encompasses a wide spectrum, including components, Forms, Events, Keys, Router, **Redux**, Animations, and **Flux** concepts.
- Within the realm of **React**, I've mastered the art of building interactive UIs through One-way data flow, **Virtual DOM, JSX**, and React Native concepts. My **React** Component library boasts an array of elements such as **Buttons, Checkboxes, Inputs, Icons, Toggle Buttons, Dropdowns, Multi-Level Dropdowns**, and more.
- I possess a solid understanding and practical knowledge of **TypeScript and ECMAScript 6 (ES6)**, which I have effectively implemented in various projects.
- In the realm of **React** development, I've leveraged **Node Redux, Webpack, and Grunt** to transform applications into Single Page Applications (SPAs) using the **React** library, ensuring a streamlined and responsive user experience.
- I have hands-on expertise in employing **Hooks** and **Redux** for efficient state management, along with **React Router** for seamless routing, enabling the creation of feature-rich single-page web applications with **React**.
- My toolkit includes proficiency in **Node.js** and various **NPM** modules, such as http-server, Marathon, inquirer, path, **MongoDB**, Micro Services, Request, Elastic Search, express, spark, and templating engines, enabling me to build versatile and high-performing applications.
- I excel in automating, configuring, and deploying instances within **AWS** environments and data centers. My familiarity extends to **AWS** services like **EC2, CloudWatch, CloudFormation**, and the management of security groups, ensuring the secure and efficient operation of cloud-based infrastructure.
- Created modules into **Node.js** and built projects properly with **Express.js** for back-end programming.
- Furthermore, I have hands-on experience in integrating various screens into the frontend using React JS, leveraging predefined components from **NPM** (Node Package Manager) and the **Redux** library. Middleware and **Redux-Promise** are tools I'm adept at using to retrieve data from the Back-End and facilitate **RESTFUL** services.
- I've also worked with the latest **JavaScript ES6** features and frameworks like **React. JS**, all the while incorporating **ECMA Script 6** features. For efficient **JSX** and **ES2015** (ES6) compilation, I've skillfully employed **Babel** and **webpack**.
- In the realm of **DevOps**, I've gained exposure to Continuous Integration and Continuous Delivery (**CI/CD**) tools like **Jenkins**. Bridging the gap between front-end and back-end systems is within my realm of expertise.

- For quality assurance, I've proficiently employed Unit testing frameworks such as **Jasmine, Karma, Protractor**, and **Mocha** test runners. Keeping projects organized and on track, I rely on bug tracking tools like **JIRA**.
- I've adeptly used **GIT** and **SVN** for Source Code version management. My toolkit also includes **IDE** tools like **Notepad++**, **Sublime Text Editor**, and **VS Code**.
- I possess exceptional communication and interpersonal skills. I thrive both as a team member and an individual contributor.

Technical Skillsets

- **Frameworks:** React.js, Redux, Redux Thunk, Hooks /Toolkit, Node.js, Bootstrap, Angular, Express
- **Database:** PostgreSQL, MongoDB, MySQL, Mongoose.
- **Management Tools:** Node.js, Yarn, NPM, Webpack, Vite, Git, GitHub
- **Debugging Tools:** Chrome Developer Tools
- **Testing Tools:** Jasmine, Mocha, Jest, QUnit, Enzyme, Dockers, Git, VScode,
- **Cloud Technologies:** AWS Lambda, AWS S3, AWS Amplify, AWS CloudWatch
- **Programming Languages:** Python, C, Java, C++, Kotlin, Scheme, HTML/CSS, JavaScript, Ajax, SQL etc.

Professional experience

Experian, Costa Mesa, CA

2022/07 – present

Frontend Developer

Description-

As a Frontend developer at Experian, I focused on the development and upgrade of the customer management system platform. I enhanced the system efficiency in both front-end and back-end to store and manage the information details of customers, while focusing on implementing responsive designs, lazy loadings etc. and optimizing CRUD API algorithms.

Responsibilities-

- Built webpage in **JSX** and **HTML5**, implemented function with **JavaScript** based on **ReactJS** and adjusted layout with **CSS3**.
- Adopted **React router** to construct a single-page application, which provided users a seamless and user-friendly experience during switching pages.
- Worked on **React hook** using **JavaScript** to manage status of controlled components, such as visibility of some information and accessibility of a button.
- Checked authentication by using **React hook** and Redirect method to prevent unauthorized visiting.
- Developed Object Oriented JavaScript code to dynamically generate and manipulate UI elements. Incorporated **Redux** and **React Hooks** with gradual adoption / migration strategy.
- Experience in **Redux** for stateful management and plus lifecycle for component's internalize stateful management.
- Implemented asynchronous actions **Thunk** as middleware in **Redux** and used **axios** to send multiple HTTP requests.
- Strong skills in designing and building **thunk** action creators like **CRUD** operations with **Axios**.
- Utilized **Express.js** router to deal with different incoming **http** requests.
- Implemented file read/write system in **Node.js** to read and save uploaded members' avatar or photo in server's local folder and store the **URL** in database.
- Designed member schema and developed database in **NoSQL** database **MongoDB** for fast read/write operation and utilized **Mongoose** to manipulate the database.
- Improved **MongoDB** visiting performance by implemented populate function to avoid repeated database visiting for related information.
- Developed **Node.js** middle layer to enable server-side rendering (**SSR**) and search engine optimization (**SEO**).
- Designed backend **REST API** using **Express.js** to allow create, read, update, and delete operations on users' information management.
- Developed **REST API** based on predefined data structure and tested in **Postman** to provide access to front-end.
- Optimized and improved web application and components with **HTML5**, **CSS3**, with **JavaScript**.
- Developed some front-end functions such as sort and pagination based on UI libraries including **Ant Design**, **Material UI** and **Bootstrap**.
- Used **Git** as source code version control and deployed the **API** to a server on **AWS** to achieve auto-scaling.

- Implemented **Scrum** and **Jira** in project management and improved work efficiency.

Tech Stack- JSX, HTML5, JavaScript, ReactJS, CSS3, react router, react hook, React router, Redux, Thunk, Axios, Express.js, Node.js, URL, NoSQL, MongoDB, Mongoose, REST API, Express.js, Postman, Ant Design, Material UI, Bootstrap, AWS, Scrum, Jira

Boeing Remote

2021/10 - 2022/06

UI/UX Developer

Description-

At Boeing, I focused on the development of UI/UX of website development. I collaborated with UI designers to implement visually appealing and user-friendly interfaces. I enhanced the system efficiency by optimizing frontend code structure of system performance, ensured faster load times and efficient data rendering.

Responsibilities-

- Worked on an **Agile (Scrum)** Development Team to deliver regular updates to business team and project managers.
- Involved in designing and developing the web pages using **HTML 5, CSS3, JavaScript, Bootstrap, SASS, LESS, React.js, Redux, Node JS, Mongo DB.**
- Worked heavily with **React Hooks** and Context Providers for sharing state across multiple components.
- Worked on **React JS Virtual Dom** and **React** views, rendering using components which contains additional components called **custom HTML tags**.
- Involved to implement various screens for the front end using **React JS** and used various predefined components from **NPM** (Node Package Manager) and **redux** library.
- Developed Single Page Applications (SPAs) using **React-Router (including Hooks & Context API)** and to enable navigation from one view to the next as clients performs application tasks.
- Used **Angular** for client-side data binding and template-based UI development.
- Incorporated **React Hooks & Context API** with gradual adoption / migration strategy.
- Worked in using **React JS components, Forms, Events, Keys, Router, Animations, and Flux concept.**
- Implemented stable **React components** and stand-alone functions to be added to any future pages.
- Responsible for **React UI** and architecture. Building components library, including Tree, Slide-View, and Table Grid.
- Utilized React for its efficient data flow architecture to create a lightweight and render efficient web app that searched projects via the **GitHub API** through keywords.
- Have worked on **AWS** for fetch the pictures files from **AWS to UI.**
- Developed the **React container** and presentational components (as Stateless and Functional components when applicable).
- Work closely with the development team to implement the enhancements and upgrades of the services.
- Developed the **flux pattern** by using **redux framework** as a core dependency.
- Worked with **Angular JS** Forms, Validations, Modules, Factory Services, DOM, Events, Expressions, Directives, Controllers, filters, Http Request.
- Used **Node Package Manager (NPM)** to manage modules & used it to install useful tools as **Grunt, and Express.**
- Developed the application on **Node JS platform** using **JavaScript programming.**
- Implement modules into **Node JS** to integrate with designs and requirements.
- Developed single application to render dynamically based on the **JSON** from the **Node JS server.**
- Fetch data from mongo DB using **Mongoose of Node.js.**
- Worked under **AWS** management tools such as **(EC2, EBS, ASG, RDS and R53)** Developed **AWS Cloud Formation templates** to create custom sized VPC, subnets, EC2 instances, ELB, Security Groups.
- Worked with **Mocha** unit test framework to write unit tests for **JavaScript** code.
- Developed single page applications and Micro services, using **NodeJS and React** libraries and manage continuous integration and deployment for microservices in the **AWS** platform using (Kubernetes Cluster, Docker, Nginx Proxy, Nexus, Jenkins and GitLab).
- Handled cross browser/platform compatibility issues (IE, Firefox, and Safari) on both Windows.
- Used **JIRA** to keep track of outstanding bugs to reduce downtime, increase productivity, and improve communication.

Tech Stack- HTML5, CSS3, JavaScript, Bootstrap, SASS, LESS, React.js, Redux, Node, Mango DB, React JS Virtual Dom, React, NPM, Angular, GitHub, AWS, flux, Mocha, JIRA.

Description-

As a Intern at Beebzy, I focused on the E-commerce platform design and development. I focused on developing customer feedback section by building survey user interface, and API of the automatic collection of essential user information for data analytics and model creation.

Responsibilities-

- Develop web applications using **HTML5, CSS3, JavaScript**, and **React** as per requirement.
- Create a reusable component using React and used in various parts of applications to build more than one **UI** instance.
- Working with **CSS grid layout, flexbox**, media queries and **Bootstrap** to make the page attractive.
- Fetching data with help of **API, RESTful** web services using **AJAX and JSON**.
- Implement new features with **Typescript** and other **RESTful APIs**.
- Collaborate with other team members on a project and keep code track changes using **Git** version control system.
- Built single-page applications using **React** on top of a **Redux** architecture
- Developed validations using **JavaScript** form validations.
- Involved in consuming **RESTful Web services** to render the data to the front page.
- Basic editing in **MongoDB** using Robo Mongo client, consuming data from **JSON**.
- Used **Ajax** for requesting data and response processing.
- Used **Jest and Enzyme** to run tests and make assertions.
- Developed non-functional **HTML and CSS** pages from mockups and involved in UI review with designers to ensure excellent User Experience (UX).
- Have worked on **AWS** to fetching the pictures files from **AWS to UI**.

Tech Stack- HTML5, CSS3, JavaScript, CSS, Bootstrap, React.js, Redux, AJAX, JSON, Git, AWS, Jest, Enzyme.

Description-

As a Front-end developer Intern at Ideal, I focused on the website functionality development and efficiency enhancement. I built new pages about local restaurant and store information, integrated with YELP API. I optimized the loading efficiency of certain pages by implementing various techniques. I injected delayed loading modules, enabled HTTP caching, and rebuilt the application using the production version of AngularJS.

Responsibilities-

- Develop web applications using **HTML5, CSS3, JavaScript**, and **React** as per requirement.
- Created Factories in **AngularJS** to instantiate methods for Controllers and Services to create singleton methods to be shared between controllers.
- Developed the Buttons like popup windows and the modal windows by using the **jQuery**.
- Used **jQuery, AJAX** for service calls on pages to interact with the server for information.
- Developed data formatted web applications and deploy the script using **HTML5, CSS3** and client-side scripting using **JavaScript**.
- Produced content pages with **CSS3** layout and style markup presentations and used **JavaScript** methods and properties.
- Created forms to collect and validate data from the user in **HTML5 and JavaScript**.
- Worked on Browser Compatibility and tested each web application on popular web browsers such as Internet Explorer, Firefox, Safari, Opera and Chrome.

Tech Stack- HTML5, CSS3, JavaScript, CSS, Bootstrap, React.js, Redux, AJAX, jQuery.

Education

University of Southern California

Master's degree in Computer Science

Pennsylvania State University

Bachelor's degree in Computer Science
