

BINOD BANIYA

Full Stack Developer

Location: TX | Phone: 1+ (469) 248-6426 | Email: imbinodbaniya@gmail.com

PROFESSIONAL SUMMARY:

- Around 4.5 years' experience in all phases of SDLC including design, development, testing, enhancement, support and Implementation of various web, client - server enterprise applications using Python
- Experienced in Web Application Development with Django, Flask, SQL Alchemy, SQLite, JavaScript, jQuery, HTML5/CSS3, Bootstrap, and JSON/AJAX.
- Integrated and managed static files, including CSS, JavaScript, and media files, using Django's built-in capabilities and AWS S3.
- Skilled in Relational/SQL databases (MySQL, PostgreSQL, MS SQL, Oracle) and Non-Relational databases (MongoDB). Mastered Object-Oriented Concepts, Design (OOD), and Analysis (OOA) programming.
- Expertise in Java SE for standalone and Java EE for enterprise applications, including Spring framework for robust and scalable Java applications. Developed consumer-based features using Django, HTML, TDD, and AWS Lambda. Proficient in Django and Fast API for building high-level and asynchronous web applications.
- Proficient in creating dynamic web interfaces using Spring MVC, JSF, and RESTful APIs with frameworks like Spring Boot. Experienced with various Python IDEs and Test Automation frameworks.

TECHNICAL SKILLS:

Programming Languages:	Java, Python, JavaScript, TypeScript, C#, Ruby, PHP
Frameworks:	Django, Flask, FastAPI, Angular, Node, Spring, Spring Boot
Libraries:	Pandas, NumPy, SciPy, Matplotlib.
Front-end Technologies:	React.js, Redux, Vue.js, AngularJS, HTML5, CSS3, SASS, LESS
Back-end Technologies:	Node.js, Express.js, .NET, Ruby on Rails, Laravel,
APIs:	GraphQL, RESTful
Databases:	PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Microsoft Azure, AWS, Google Cloud Platform
UI Libraries:	Semantic UI React, Material Design, Ant Design, Chakra UI
Microservices:	Design, Development, Docker, Kubernetes
Project Management:	Agile, Scrum
Cloud Services:	AWS (EC2, S3, RDS, Lambda, SQS, SNS, SES, SWS)
CI/CD:	Git, GitHub, Jenkins, Docker, Kubernetes.
Testing:	Pytest, Factory Boy, Cypress, Playwright
Web Scraping:	Beautiful Soup, Selenium.

EDUCATION:

Master of Business Administration - MBA (Project Management) – Amberton University, 2019

B.S. in Biotechnology and Chemistry – West Texas A&M University, 2010

PROFESSIONAL EXPERIENCE:

Deloitte

Jan 2023 - Present

Full Stack Developer

- Automated Python, automated repetitive operations to maximize resource allocation and meet milestones on time. Developed and refined SQL queries for analysis, modification, and data extraction.
- Integrated the template engine of Django to create dynamic HTML pages that combine front-end and backend display. created user-friendly interfaces with Bootstrap, HTML, CSS, JavaScript, and jQuery.

- Developed Angular.js, dynamic and responsive user interfaces were developed, improving user engagement and interactivity. Established CI/CD pipelines in the AWS environment with Jenkins and GitHub Actions.
- Controlled user accounts and protected access using the integrated authentication feature of Django.
- Enhanced functionality with Python libraries such as BeautifulSoup, NumPy, and SQL Alchemy.
- Designed and developed scalable web applications using Django framework, adhering to best practices in MVC architecture. Managed datasets using Panda data frames, MySQL, and SDK.
- Implemented Django ORM to interact with PostgreSQL databases, ensuring efficient data retrieval and manipulation.
- Developed RESTful APIs with Django REST Framework (DRF) for seamless integration between frontend and backend systems.
- Utilized Django's authentication system to implement user authentication, permissions, and role-based access controls. Employed BeautifulSoup and Selenium for web scraping to enhance data acquisition.
- Created and customized Django admin interface to streamline content management tasks for non-technical users. Implemented FastAPI for high-performance, asynchronous web applications.
- Utilized GraphQL for efficient data querying and retrieval, designing schemas and resolvers to optimize performance by reducing over-fetching and under-fetching of data.
- Adhered to Test-Driven Development (TDD) principles using Junit, Mockito, and Easy Mock, writing unit tests, integration tests, and end-to-end tests to ensure code reliability and maintainability.

Epsilon, TX

Nov 2019 - Dec 2022

Full Stack Developer

- Designed APIs and endpoints for smooth front-end-backend communication, and orchestrated Python integration with the Django framework.
- Implemented sophisticated SQL subqueries, joins, and window functions for intricate data analysis, supporting well-informed decision-making processes.
- Designed and implemented API endpoints in coordination with front-end developers to effectively provide data to single-page applications built with Angular and React.
- Developed user interfaces with HTML, CSS, JavaScript, and jQuery that are easy to navigate on a variety of devices by following accessibility guidelines and contemporary design ideas.
- Employed Material Design principles in frontend development, ensuring a consistent and user-friendly interface across various devices.
- Implemented form validation and processing logic using Django's form classes, ensuring data integrity and security. Designed and optimized Django templates for dynamic and responsive web page rendering across multiple devices.
- Implemented middleware components to handle request and response processing tasks, such as logging and error handling. Conducted unit testing, integration testing, and end-to-end testing using Django's testing framework to ensure application reliability and performance.
- Leveraged Docker containers on AWS ECS or EKS for deployment, using Docker Compose or Kubernetes YAML files to define container configurations and dependencies.
- Utilized Ansible for automating cloud deployment processes, writing playbooks and roles for infrastructure provisioning, configuration management, and application deployment.
- Implemented fully automated CI/CD pipelines using Jenkins, Git, and Puppet, configuring jobs to automate build, test, and deployment processes.
- Optimized SQL queries and database interactions with advanced techniques, enhancing system performance and data retrieval efficiency. Employed tools like Postman or Swagger for API documentation and testing.
- Utilized AWS services such as EC2, auto-scaling, and Elastic Load Balancing to build scalable systems handling load fluctuations. Employed AWS Lambda for serverless computing to optimize cost and scalability.
- Conducted thorough data analysis using Python libraries including Pandas, NumPy, and SciPy, employing statistical analysis, data visualization, and machine learning techniques to derive actionable insights.
- Developed robust integration methodologies between client web portals and existing infrastructure using SOAP APIs and vendor-specific frameworks, ensuring seamless communication and interoperability.
