Contact: +1 9194508541

PROFESSIONAL SUMMARY:

- Accomplished **Java/J2EE** Developer with over **5** years of progressive **IT** experience, specializing in the **end-to-end design, development, testing, and deployment** of complex **client-server** and **web-based enterprise applications**.
- Proficient in utilizing industry-leading frameworks, including **Struts, Spring Boot, Spring MVC, and Hibernate**, to create scalable and efficient applications.
- Extensive experience in **Microservices** and **Cloud-Native Applications**, with a focus on **Spring Transaction Management** and integration of **Spring** with **Hibernate** and **Web Services**.
- Strong understanding and application of **Object-Oriented Programming (OOP)** concepts, including **Collections, Multi-Threading**, and **Exception Handling**, ensuring **robust** and maintainable code.
- Specialized knowledge in **Java** Messaging Service, including **Rabbit MQ, IBM MQ, Active MQ, and Apache Kafka** with **Zookeeper**, enhancing real-time communication capabilities.
- Proven track record in web application development using **HTML, DHTML, CSS, XML**, and various open-source frameworks such as **Struts** and **Spring**.
- **Developed dynamic and responsive web applications** using **Angular, React** focusing on creating modular and reusable components for enhanced maintainability.
- In-depth experience with **J2EE** design patterns (**MVC, Service Locator, Singleton**) and deployment over industry-standard servers like **Apache Tomcat, JBoss, WebLogic, and WebSphere**.
- Deployed and managed cloud infrastructure on **AWS**, utilizing services such as **EC2, S3, RDS, Lambda**, and **CloudFormation** for scalable and cost-effective solutions.
- Strong familiarity with modern programming languages, including **Java, C++, Python, and JavaScript/Typescript**, facilitating versatility across diverse tech stacks.
- Extensive database experience with **Oracle, DB2, MySQL, SQL, and PL/SQL**, including database development involving tables, triggers, views, packages, and stored procedures.
- Led the implementation of **Microservices architecture**, showcasing expertise in **Spring Boot, Docker, and Kubernetes** for scalable and **modular** solutions.
- Applied advanced skills in **Big Data Technologies**, including **Apache Kafka, Apache Spark, and Apache Storm**, for efficient **data** processing and **analytics**.
- Demonstrated strong **Networking skills**, proficient in **TCP/IP, HTTP/HTTPS, and RESTful APIs**, ensuring seamless communication between systems.
- Proficient in version control tools such as **GitHub, Subversion (SVN), and CVS**, ensuring efficient collaboration and code management within a team.
- Strong commitment to **continuous learning** and staying updated with emerging **technologies**, contributing to a dynamic and innovative development environment.

Technical Skills

Programming Languages	Java/J2EE, C, C#, SQL, PL/SQL, JavaScript
J2EE Technologies	Servlets, JSP, EJB, JMS, JSF, JDBC, JNDI, Web Services, Spring.

Web Technologies	HTML, CSS, jQuery, JSP, Bootstrap, Angular.JS, AJAX, JSON, XML, Node.JS
Frameworks	Spring Boot, Spring, Struts, Hibernate, Angular.JS, React.JS
XML/Web services	REST, SOAP, Apache-CXF, Jersey, JAX-WS, JAX-B, DOM.
IDE	Eclipse, Visual Studio, MYSQL Workbench, SQL Developer, Spring Tool Suite (STS)
Databases	MySQL, Oracle 10g, MS-SQL, MongoDB, DynamoDB
Methodologies	Agile, TDD
Web/Application Servers	Tomcat, WebLogic, WebSphere
DevOps Tools	AWS, Azure, Docker, Kubernetes, Jenkins
Operating systems	Windows 8/10, Unix, Linux
Version Controls	GIT, SVN
Testing/ Debug Tools	JUnit, JIRA, SoapUI, Postman, Selenium, Protractor, Log4J

Client: Delta Airlines, GA.

July 2023 – Present

Role: Full Stack Java Developer

Responsibilities:

- Analyze and interpret business requirements, actively participating in the technical design, development, and testing phases of various modules.
- Demonstrate expertise in Core Java, OOPs, and Java Server Pages (JSP), ensuring efficient and modular code development.
- Implement data access logic using Hibernate Persistence framework, facilitating seamless mapping between Java objects and RDBMS.
- Utilize JPA (Java Persistence API) frameworks, including JDO (Java Data Objects) and Hibernate, for effective persistence management.
- Develop UNIX Shell Scripts for batch jobs, streamlining data transfer processes across different servers.
- Utilize Spring Security to develop secure login and logout features for applications.
- Design User Interface (UI) web applications using HTML5, CSS, and JavaScript frameworks, adhering to W3C standards.
- **Enhanced application performance** by implementing Angular's Ahead-of-Time (AOT) compilation and tree-shaking.
- **Architected and maintained scalable cloud solutions on AWS**, leveraging services like EC2 for compute, S3 for storage, and DynamoDB for NoSQL database needs.
- Contribute to database design and optimization, writing complex SQL Queries, stored procedures, and functions for Oracle, MySQL, and DB2.
- **Optimized query performance** in NoSQL databases through effective indexing and aggregation strategies.
- **Integrated automated testing** within CI/CD pipelines to ensure code quality and prevent regressions, using frameworks like JUnit, Selenium, and Postman.
- **Deployed and managed containerized applications** on Kubernetes, ensuring efficient orchestration, scaling, and maintenance of microservices.
- Develop Unit Test Cases for UI Screens using Jasmine and Karma, ensuring robust and reliable application behavior.

Environment: HTML, XHTML, CSS, JavaScript, jQuery, Java Server Faces (JSF), Jasmine & karma, Gulp, JSP, Spring AOP, Spring Bean, Spring Annotation, Spring Security, Hibernate, RDBMS, SOAP, JAX-WS, RDBMS, Drools, Junit, Log4j, Glassfish.

Client: Lexis Nexis, NY.

July 2019 – Aug 2022

Role: Software Developer

Responsibilities:

- Actively involved in the analysis, design, implementation and deployment of the application.
- Used the fundamentals of Java 8 like parallel streams and filters through lambda expressions to handle the searching.
- Involved in the development of the application based on backend Spring MVC architecture.
- Responsible for implementing the application using Spring IOC, Spring MVC, Spring Batch, Spring Boot and handled the access-control features using Spring Security which is integrated with Micro services into the existing system architecture.
- Developed the robust web-based application on Spring Boot frame structure using Java/J2EE technology.
- Responsible for creating and maintaining architecture for Restful API using Spring Boot.
- Used Dependency Injection feature of build and release Spring Boot framework and O/R mapping tool Hibernate for rapid development and ease of maintenance.
- Implemented DAO layer using different hibernate techniques like strategies, Inheritance, annotations and criteria interfaces.
- Developed web pages using HTML5, JavaScript, JQuery and Angular.JS and customized the web features by CSS3 and Bootstrap.
- Developed the components using Angular 6 needed for the application from the scratch and customizing from various Angular related libraries to meet the application's functionality.
- Designed, developed a custom, single-page, responsive web application on front end using Angular.JS.
- Designed and deployed a multitude application utilizing almost all the AWS Including EC2, R53, S3, RDS, DynamoDB, SQS, IAM, Cloud Formation and lambda, focusing on high-availability and fault tolerance.
- Responsible for creating and maintaining the Docker containers also implemented build stage- to build the micro service and push the docker container image to the private docker registry.
- Used Java Mail Sender (JMS) for sending detailed notifications depending upon the success and failure once the backend process is complete and for mailing administrator for any system related problem.
- Developed session EJB and message driven bean (MDB) to process JMS XML messages.
- Used Log4J to capture the logs that include critical business related information.
- Developed test cases and performed unit testing using JUNIT Test case.
- Involved in consuming, producing SOAP based web services using JAX-WS.
- Written SQL queries PL SQL Stored procedures, functions, triggers, cursors, sequences, and indexes, which are going to be invoked by Batch processes.
- Worked on Agile, SCRUM development methodology and built the application with Test Driven Development (TDD).
- Interact with other developers and end users to design and implement new features throughout the framework.

Environment: Java 8, spring, MVC, Micro Services, Spring Boot, Hibernate, Eclipse, HTML5, CSS3, JavaScript, Angular 6, Angular.JS, Node.JS, AWS, Docker, JMS, XML, EJB, Log4j, JUnit, SOAP, REST, SQL, Agile and Windows.

Client: Target, MN.

May 2018 – July 2019

Role: Software Developer

Responsibilities:

- Designed coded, implemented, optimized and tested new features and modules for the derivatives system as part of an agile team and improved automation test suites.

- Developed web components using **MVC** pattern under spring framework.
- Performed requirement analysis, design changes, development and maintenance of the components using **spring MVC**.
- Worked on spring modules like **Dependency Injection, Aspect Oriented Programming** and Spring Mail, **Spring JMS** and **Spring Security**.
- Used spring framework to achieve loose coupling between the layers thus moving towards Service Oriented Architecture (**SOA**) exposed through **Restful Services**.
- Used **Hibernate** extensively to have **Database** access mechanism with complex queries through **Hibernate Query Criteria** interfaces and Hibernate to deal with the database.
- Developed middle-tier application with **J2EE** using **Java Beans and Web Services**.
- **Developed dynamic and responsive user interfaces** using **ReactJS**, focusing on creating modular and reusable components.
- **Integrated RESTful APIs with React services**, facilitating seamless data communication between front-end and back-end systems.
- Implemented **Java** design patterns like Front Controller, Service Locator, Business Delegate, and Data access Object, Factory Pattern, Session Façade, etc.
- Used Web services (**SOAP**) for transmission of large blocks of **XML** data over **HTTP**.
- Wrote the **SQL** queries for **CRUD** operations, and Stored Procedures using **MySQL, PostgreSQL, Oracle**.
- Deployed and managed applications on Microsoft Azure, leveraging services like Azure App Service, Azure Functions, and Azure DevOps for efficient CI/CD integration.
- Configured and optimized Azure resources such as Virtual Machines, Storage Accounts, and SQL Databases to support application infrastructure.
- **Established robust CI/CD pipelines** using Jenkins, automating build, test, and deployment processes to streamline development workflows.
- **Automated infrastructure deployment on Azure** using Azure CloudFormation and Terraform, ensuring consistent and repeatable environment setups.
- Used **JMS** to establish message communication.
- Created and compiled **XML** Schema to generate Java Bean classes.
- Performed Design review and Code review for well-known performance practices for better performance and code maintainability.

Environment: Java, spring, MVC, Hibernate, XML, JMS, Java Beans, Core Java, RESTful, SOAP, SQL, Agile and Windows

EDUCATION:

Masters in Computer Science and Engineering
New York Institute of Technology

Sep 2022- May 2024
