Certified Salesforce Administrator (SCA)

Work Experience

Salesforce Administrator

| Aug 2022 – Present

McKinsey & Company, Dallas, TX

- Enhance Salesforce Sales Cloud and Service Cloud to streamline business processes, boost productivity, and improve user experience.
- Design Lightning apps, standard and custom objects, fields, record types, page layouts, layout assignments, and validation rules to align with business requirements.
- Engage in all phases of the SDLC, including design, development, testing (unit, integration, UAT), and deployment from Sandbox to Production.
- Configure custom formula fields, field dependencies, validation rules, workflows, and approval processes to automate alerts, field updates, and email notifications.
- Execute large-scale data migrations, updates, and maintenance using Apex Data Loader and Import/Export Wizard while ensuring data integrity across systems.

- Utilize Apex and SOQL for custom queries and scripting, strengthening data management and enabling complex reporting capabilities.
- Manage Sandbox Environments by configuring Outbound Change Sets in the development environment and Inbound Change Sets in the production environment to ensure smooth deployment of metadata changes.
- Generate Reports using standard and custom report types and Dashboards for comprehensive data visualization.
- Collaborate with various user groups to gather Salesforce implementation requirements and document interactions across all levels of internal and external stakeholders.
- Integrate REST Web Services with Salesforce to facilitate seamless data exchange across enterprise systems.
- Manage various Salesforce.com standard objects, including Accounts, Contacts, Cases, Leads, Campaigns, Reports, and Dashboards.
- Utilize Salesforce DevOps Center to streamline deployment processes by building and managing change pipelines directly from production, enhancing version control and collaboration.
- Develop complex queries using T-SQL, DAX, and MySQL for efficient data retrieval and analysis.
- Operate within SDLC, Agile, and Scrum methodologies, maintaining a structured Project Backlog, Sprint, and User Stories for streamlined development cycles.
- Administer MS SQL Server (2005/2008/2012), SQL Server Management Studio (SSMS), and SQL Server Integration Services (SSIS) for backend database operations.
- Configure and Monitor Load Balancer settings to optimize Salesforce performance, ensuring seamless distribution of network traffic across multiple servers for high availability and reliability.

Salesforce Administrator Epsilon, Irving, TX

| Jan 2019 – Jul 2022

- Developed and maintained custom reports, dashboards, and workflows, delivering actionable insights to stakeholders across departments.
- Utilized expertise in Salesforce.com (Sales Cloud, Service Cloud, Marketing Cloud) to analyze business processes, recommend improvements, and implement new functionality.
- Worked with SOQL queries and SQL to store and download data from the Salesforce platform database.
- Collaborated with the QA team to design test cases and partnered with the UX/UI team to improve product design and user experience, increasing user satisfaction.
- Maintained up-to-date knowledge of new Salesforce features, offered process improvement suggestions, and oversaw functional and UAT testing.
- Directed BA and QA/QC activities to ensure traceability and optimal coverage of business requirements by the defined plan and scope.
- Responsible for all activities related to data migration using Data Import Wizard and Data Loader, uploading data in CSV files, Data Mapping, checking for data integrity, and Duplicate Management.
- Creating and maintaining Profiles, Roles, Page Layout, and Record Types, and configuring the permissions based on the organization hierarchy requirements.
- Applied HTML in customizing Visualforce pages and Lightning components.
- Proficiency in Salesforce security, permissions, and access, including profiles, permission sets, roles, sharing rules, hierarchy, and page/field level visibility.
- Implemented Email-to-Case, Web-to-Case entry, and manual case entry for entering customers' cases in the Cases Tab.
- Executed various levels of Unit Integration and User Acceptance testing using test cases to prove that systems conform to requirements.
- Authored Business Requirements Documents (BRD) to capture stakeholder needs and project goals.
- Automate Deployment Workflows using DevOps Center and change sets to minimize manual intervention, reducing deployment errors and improving efficiency.
