

ABINAV KORGINJA

Software Developer

Irving, Tx | abhinavkumarkoriginja8@gmail.com | +1 405-653-2443

SUMMARY

- Software Developer with 5 years of experience in building and optimizing web applications using technologies such as **JavaScript**, **React**, **Node.js**, and **SQL databases** like **MySQL**, **PostgreSQL**, and **Oracle**.
- Expertise in developing user-friendly frontend services with **HTML5**, **CSS3**, and **JavaScript**, optimizing applications for speed and responsiveness ensuring security and performance.
- Knowledgeable in developing **RESTful APIs**, **Git**, **GitLab CI/CD pipelines**, integrating third-party services, optimizing database queries and deploying applications on cloud platforms like **AWS**.
- Built reusable **Angular/React** components and front-end libraries with **TypeScript**, **HTML5**, **CSS3/SCSS**, and **Webpack**, delivering modular designs and micro frontend architectures.
- Proficient in **PHP** and **C#** for building robust enterprise applications, leveraging **.NET** framework and tools to implement high-performance solutions, ensuring code efficiency, maintainability, and seamless integration with databases.
- Experienced Java Developer with expertise in **Spring MVC** and **Spring Boot**, building scalable microservices and backend services using **Hibernate/JPA**, **MySQL**, and **PostgreSQL**, with hands-on experience in event-driven architecture using **Kafka** and **RabbitMQ**.
- Proficient in **Agile environments**, contributing to all phases of the software development lifecycle, and delivering high-quality solutions.

PROFESSIONAL EXPERIENCE

Paycom

Software Developer

Irving, Texas

Sep 2023 - Current

- Developed and maintained enterprise web applications using **PHP** and the **Zend** MVC framework, building reusable controllers, models, views, and modular components to support core business functionalities, improve maintainability, and reduce development time.
- Implemented **RESTful API** integrations and optimized backend logic for better performance and scalability.
- Debugged and resolved production issues using **Zend's** debugging tools, logs, and profiling features to ensure application stability.
- Containerized **.NET**, **PHP**, and **ETL** applications using **Docker** to ensure consistent development, testing, and production environments across teams.
- Engineered and optimized 40+ **ETL** pipelines using **C#** and **SSIS** to process and analyze large operational datasets, improving data processing efficiency and reducing manual data handling time by 4 hours per week.
- Utilized the **OpenCode AI tool** in day-to-day development activities to accelerate code development, optimize debugging, improve productivity, and support scalable full-stack application delivery.
- Enforced comprehensive **unit testing** for 50+ complex code modules using frameworks like **MSTest** and **NUnit**, ensuring the stability and reliability of applications.
- Coordinated **Redux Thunk** as middleware in 5+ applications to manage asynchronous actions, dispatching resolved data to the front end and enhancing responsiveness.
- Streamlined deployment pipelines using **AWS** services, including **AWS S3** for storage of data and **AWS EC2** for hosting health applications.
- Automated the generation of monthly business reports using **C#** and **Excel Interop**, saving the team 5+ hours per week in manual report preparation. Built custom libraries in **C#** to streamline common data transformations.
- Designed and integrated authentication and authorization systems using **ASP.NET Identity** for secure user management across 15+ enterprise applications.
- Managed version control using **GitLab**, implementing **CI/CD** pipelines with **Docker** and **Jenkins** to support multi-environment deployments and automated testing.
- Collaborated with DevOps teams to deploy applications on **Kubernetes clusters** (EKS), utilizing **Config Maps**, **Secrets**, and **Ingress controllers** to enhance security and performance.
- Designed and deployed **Microservices** architecture using **Docker** and **Kubernetes** (EKS), implementing event-driven communication patterns with **RabbitMQ** and **Kafka** to build scalable, loosely coupled backend services across enterprise applications.
- Used **Entity Framework** and **LINQ** as **ORM** tools for efficient data access and manipulation, streamlining backend processes and improving overall system efficiency.
- Utilized **PHP** for server-side scripting in hybrid **.NET** and **LAMP** stack environments to support business logic execution.
- Crafted and implemented responsive user interfaces using **HTML5**, **CSS3**, and **JavaScript**, adhering to best practices for cross-browser compatibility.
- Administered over 10 **RESTful APIs** using **C#** and **Http Client**, documenting endpoints with **Swagger** (Open API) to enable seamless integration from legacy **PHP** and **JavaScript** applications and improve data consistency across platforms.
- Led the migration of legacy applications to **.NET Core**, resulting in a 40% improvement in application startup time and a 25% reduction in infrastructure costs.

Dell Technologies

Full Stack Developer

India

Apr 2020 - Aug 2021

- Optimized over 50 server-side applications using **C#** and **.NET Core**, handling daily user interactions exceeding 1000 requests.
- Created advanced **MVC** controllers and view models, seamlessly integrating with the backend for improved modularity.
- Hosted **.NET** components and web applications on **Windows Server (IIS)** and **AWS EC2**, ensuring high availability, scalability, and reliable uptime.
- Developed responsive UI components with **Angular 12** and **React.js**, leveraging **TypeScript**, **HTML5**, **CSS3**, and **SCSS** for **CRM** workflows with cross-browser compatibility.
- Built reusable **Angular/React** modules with **Webpack** and **Redux**, standardizing design patterns and improving maintainability across **CRM** dashboards.
- Collaborated on secure **Spring Boot**-based **REST** services, integrating frontend applications and implementing **JWT/OAuth2** authentication and **Swagger** documentation.

- Implemented automated testing and deployment pipelines using **GitHub** Actions within our **Agile Scrum** workflow, integrating deployments to **AWS EC2**, reducing deployment time by 20%, and improving code coverage to 10%.
- Implemented **ASP.NET Core** to build robust, high-performance web **APIs** and applications, supporting seamless client-server communication and business logic execution.
- Incorporated backend services with responsive front-end interfaces, contributing to the development of 20+ web applications using **HTML5**, **CSS3**, and **React**.
- Conceptualized **OAuth2** and **JWT** for secure user authentication across 10+ applications, handling 300+ daily users. Ensured the security of sensitive data by implementing **SSL** encryption and preventing security vulnerabilities.
- Optimized data storage with **MongoDB** for real-time inventory updates, **PostgreSQL** for efficient query processing and high-traffic management.

Adani Software Developer Intern

India
OCT 2019 – Mar 2020

- Executed front-end testing for 25+ components using **Jest**, ensuring code stability and reducing post-production issues by approximately 10 bugs per month.
- Maintained web applications using **Java** and **Spring Boot**, contributing to the entire software development lifecycle, from initial requirements gathering to deployment and post-launch support.
- Engineered web applications with **CSS** for layout design, structured **HTML** for semantic clarity, and ensured adherence to **W3C** standards, improving **SEO**, accessibility, and performance for web applications.
- Integrated third-party libraries and **APIs** in **React** to enhance functionality and efficiency while documenting front-end projects to streamline developer onboarding and improve team productivity.
- Developed **Angular (TypeScript)** components for form-driven workflows, integrating them with both Java Spring Boot and Node.js backend APIs.
- Built and maintained **RESTful** backend services using **Spring Boot** and **Hibernate/JPA**, connecting to **MySQL** and **PostgreSQL** databases and optimizing queries to improve **API** response times.
- Analyzed and improved web performance using tools like **Chrome DevTools**, identifying 10 critical areas for improvement and decreasing average page load times by 2 seconds.
- Operated in a **JIRA** Agile environment, participating in 30+ sprint-planning meetings and addressing 100+ tickets to meet project timelines and deliverables.

EDUCATION

Oklahoma City University

Master's in computer science

OK, USA
Aug 2021 – May 2023

Sree Dattha Institute of Engineering and Science

Bachelor of Technology in Computer Science Engineering

India
Aug 2016 – Apr 2020

TECHNICAL SKILLS

Programming Languages: C#, .Net, C, C++, Go, SQL, JavaScript, Typescript, HTML5, CSS3, Shell Scripting, PowerShell, Object Oriented Programming (OOP), PHP

Frontend Technologies: React, Angular, Vue.js, Bootstrap

Databases and Cloud: SQL Server, MySQL, Oracle SQL, PostgreSQL, Microsoft Azure SQL Database, NoSQL (MongoDB, Apache Cassandra), Oracle, AWS (EC2, RDS, DynamoDB, S3, CloudWatch)

Frameworks: .Net Core, ASP .NET, ASP.NET Web API, MVC, React, Restful API, Symfony, Agile, NodeJS, Entity Framework, Blazor, WCF, Razor, Web Forms, Scrum, Kanban

Cloud Technologies: Azure (Data Bricks, Data Factory, Data Lake, Blob Storage), AWS (EC2, S3, Lambda, Glue, Aurora DB, Redshift, Athena, EMR)

IDES and Version Tools: Git, GitLab, MS SQL server, MongoDB, GitHub, EC2, JSON, SonarQube, Docker, Kubernetes, Ansible, Octopus, TeamCity, Team Foundation Server (TFS), SVN, Eclipse, Visual Studio, PhpStorm

Methodologies: Agile, V-model, Parallel and Waterfall

PROJECTS

E-Commerce Website:

Deployed a comprehensive E-Commerce website as a Full Stack Development, utilizing **React** for the front-end, **Node.js**, **Express** for the back-end, and **MongoDB** for database management **PHP**.

Facebook Messenger:

Merged real-time messaging functionality with WebSockets, enabling instant communication, and implemented user authentication and authorization using **JWT** for secure access.

Student Database Management System:

Devised features for managing student records, course enrollment, grades, and attendance, ensuring secure authentication and seamless user experience with real-time data updates using **PHP** with **Symfony** framework.

Simple Assistance for Physiological Treatment (SAPT):

Developed a Smart Knee Brace system utilizing **IoT** technology and **Python** scripting language to provide real-time monitoring and data analysis.
