+ 1 260-387-2243

SUMMARY:

- DevOps automation engineer & **CI/CD** (Continuous Integration/Continuous Deployment) engineer around 5+ years of solid experience in working on **DevOps/Agile** operations process and as Developer around tools (Code review, unit test automation, Build & Release automation, Environment Management).
- Expertise in Microsoft **Azure Cloud Services (PaaS & IaaS)**, Application Insights, Document DB, Internet of Things (IoT), **Azure Monitoring**, **Key Vault**, **AKS**, **ACR**, **Blob Storage**, **Cosmos DB**, **MongoDB**, **MySQL**, **Visual Studio Online (VSO)** and **SQL Azure**.
- Well Versed in building and deploying applications onto different environment such a **QA**, **UAT** and productions.
- Deployment support and configuration of cloud services including AWS.
- Creating **amazon EC2 instances** and maintaining with security groups. Architecting of **Elastic Load Balancers** with EC2 Auto Scaling groups. Maintaining volumes and mapping with multi-AZ VPC instances.
- Backup Setup Like **Snapshots** and Amazon machine images (**AMIs**) of the instances.
- Experience with setting up of automated pipelines in **Azure DevOps for deployment in Azure Web Apps, Azure Functions, Azure Data Factory & Azure Data Bricks**.
- Expert in Installation, Configuration and Administration of Windows, Ubuntu Linux, Cent OS and RedHat Environments.
- Designed and monitored release environments for new projects, utilizing Jenkins in a Linux environment.
- Mentored a team of DevOps engineers, fostering innovation and continuous learning.
- Proficient in writing Terraform configuration files for efficient AWS infrastructure management and provisioning.
- Extensive involvement in **Azure Backup, Azure Policies, Azure Key Vault**.
- Extensive experience and understanding in all phases of Software Development Life Cycle.
- Strong Analytical, Inter-personnel, Problem-solving, Communication skills and proven ability to rapidly acquire knowledge on new technologies and implement them in software projects.
- Experiences in using **build/deploy** tools such as Jenkins, **Docker** for Continuous Integration & Deployment for Microservices.
- Experience developing different types of **Azure functions** such as Http trigger, Timer trigger, Durable functions, Service bus trigger, Event-Hub trigger, and many others.
- Competent extent of skills on **DevOps** essential tools like Chef, Puppet, Ansible, **Docker**, **Git**, Jenkins, Maven.
- Responsible for on boarding application teams to build and deploy their code using **GitHub**, **Jenkins** and Ansible.
- Set-up **CI/CD** pipelines with **Jenkins** and hands on experience in building freestyle projects, pipeline, and multi branch pipeline Jobs through **Jenkins** file.
- Basic understanding of the X.509 certificate structure.
- Knowledge of cryptographic protocols and ciphers.
- Basic Knowledge of secure key storage facilities and techniques.
- Knowledge of asymmetric and symmetric cryptography.
- Implemented robust monitoring and analytics solutions within Amazon **Connect**, to make data-driven decisions and continuously improve contact center performance and efficiency.
- Experience in various **Azure** Services like Compute (Web Roles, Worker Roles), Caching, **SQL Azure**, NoSQL, Storage and Network Services, Azure Active Directory, Internet of Things (IoT), Azure Monitoring, API **Management**, **Scheduling**, Auto scaling, Azure Identity & Access Management, Data Factory, PowerShell Automation and other **Azure Services**.

- Implemented microservices, application development, and migration using AWS/Azure services such as Azure DevOps, Kubernetes Service (AKS), Container Registry, Cosmos DB, and Grafana, Azure pipelines, Monitor, RBAC, AWS Kubernetes EKS and Kubernetes API to run workloads on EKS Clusters.
- Experience in provisioning of **IaaS**, **PaaS** Virtual Machines and Web, Worker roles on **Microsoft AZURE** Classic and **Azure Resource Manager (ARM)**, Deployed Web applications on Azure using PowerShell Workflow.
- Implemented and maintained central repositories and implemented **Atlassian Bitbucket**, Atlassian Jira for issue tracking, Atlassian Confluence along with **GIT** to host GIT central repositories for source code across products, facilitate code reviews and log audits for security compliance.
- Hands on experience in **Manual & Automation** Testing, which involves User Interface, Functionality, Regression and System Integration Testing.
- Strong use of **Shell scripting** languages, including Bash for Linux and Mac platforms and PowerShell for Windows systems
- Strong understanding and working experience with **CI/CD** and available tools i.e., usage of Jenkins, Selenium, Cucumber, **Sonar and Gherkin**, component test automation.
- Facility with development methodologies, including **Agile**.
- Excellent configuration management using **Ansible**.
- Extremely knowledgeable about **CI/CIT/CID** integration.
- Proficient in writing **Jenkins** scripts for **CI/CD** Pipelines using **Groovy**.
- Wrote Ansible playbooks to launch **AWS** instances and used **Ansible** to manage web applications, configuration files, used mount points and packages.
- Deep understanding of **Azure DevOps** and Infrastructure as a Code concepts and techniques.
- Experienced in full automation and configuration management desirable.
- Ample knowledge in using **Tomcat and JBOSS** Application servers for deployments
- Security and Compliance, e.g., **IAM** and cloud compliance/auditing/monitoring tools
- Proficient in writing **Test scripts** for automation using Selenium, J-unit, Test-NG, Maven, Groovy and Cucumber.
- Strong experience in automating Vulnerability Management patching and CI/CD using Chef and other tools like Git Lab, Jenkins, and **AWS/Open Stack**.
- Involved in very effective **Agile SCRUM** process & Automated Test Cases based on TDD methodology. Testing **REST API's** using Advanced Rest Client.
- Well versed in Oracle RDBMS and **MY SQL** and proficient in **SQL queries**.
- Hands-on Experience in configuration of Network architecture on AWS with VPC, Subnets, Internet gateway, NAT, Route table.

TECHNICAL SKILLS:

Operating Systems:	RedHat Linux, WINDOWS, Unix
Cloud Tools and Technologies:	Amazon Web Services (AWS): EC2, S3, IAM, SNS, SQS, Lambda, serverless, CloudWatch, Azure, EKS, ECS, ECR, ELB, Auto Scaling, KMS, CloudFront, Cloud Formation, Elastic File system, RDS, DMS, VPC, Direct Connect, Route 53, Cloud trail, Elastic Beanstalk, Connect, Microsoft Azure
Languages:	Python, Java, XML, SHELL, RUBY, YAML, Angular
Databases:	MySQL, Oracle, Mongo DB
Artifactory Repositories:	Nexus
CM Tools:	Ansible
Web/Application Servers:	Tomcat, JBoss

Build Tools:	Maven
CI/CD Tools:	Jenkins
Automation container:	Docker, Kubernetes, OpenShift
SCM Tools:	GIT, Bitbucket, Gitlab
Bug Reporting Tools:	JIRA
Provisioning Tools:	Terraform
Monitoring Tools:	Splunk, AWS CloudWatch, Prometheus, ELK- Elastic Search, Kibana
Methodologies:	Agile/Scrum, Waterfall

EDUCATION:

- Masters in Computer & Information systems 2023-2024 (River University ,Nashua,NH,USA)
- B.E in Electronics and Communication Engineering 2016-2020 (Madanapalle institute of technology & science India)

CERTIFICATIONS:

- Certified in Microsoft Azure Administrator Associate.
- Certified AWS Developer Associate.

PROFESSIONAL EXPERIENCE:

Client: Experian ,Costa Mesa, CA (Remote)

June 2023– Present

Role: AWS/Azure DevOps Engineer

Responsibilities:

- Worked on Microsoft Azure Cloud (Public) to give IaaS support to customers. Make Virtual Machines through Power Shell Script and Azure Portal. Overseen and Created Storage Account and Affinity Group in Azure Portal.
- Implementing Azure Logic Apps, Azure Functions, Azure Storage, and Service Bus Queues for large enterprise-level ERP Integration systems.
- Experienced in configuring and managing Azure web apps, Azure App Services, Azure Application insights, Azure Application gateway, Azure DNS, Azure Databricks, Azure Traffic manager, Azure Event Hub, App services, Analyzing Azure Networks with Azure Network Watcher, Azure stack, Azure Backup and Azure Automation.
- Developed and designed Azure DevOps pipeline to manage the resources across multiple subscription in Azure.
- Automated the deployment of Azure infrastructure using Terraform, including VNets, NSGs, AKS, ACRs, VMs, and Storage accounts. Reliably versioned and created infrastructure on Azure using Terraform modules, ensuring a repeatable and consistent process.
- Hands-on experience with mobile app DevOps tools like Jenkins, Git, Jira.
- Proficient in mobile development frameworks such as iOS (Swift) and Android (Java/Kotlin), with hands-on experience in building and deploying mobile applications across multiple platforms.
- Used Azure DevOps to automate the deployment and management of Azure landing zones.
- Designed Document Data Model for DynamoDB and participated in Capacity Planning.
- Monitored and troubleshooted Azure resources using Azure Monitor and Azure Log Analytics
- Deployed, managed, and secured Databricks pipelines and jobs, working with a team of engineers to build and maintain a scalable and reliable Databricks environment.
- Implemented and maintained CI/CD pipelines for mobile applications using tools like Jenkins, GitLab CI, or Bitrise, ensuring automated build, test, and deployment processes for faster release cycles.
- Implemented Snyk's container security scanning within the CI/CD pipeline to identify vulnerabilities in Docker images, significantly reducing the risk of shipping insecure containers.

- Worked with Version Control, Build & Release Management and Deployments of the Solutions to the DEV, QA & PROD Environments leveraging Azure DevOps/VSTS principles/process (CI/CD) and toolsets of Visual Studio, AKS (Azure Kubernetes Service), Application Insights, Log Analytics.
- Implemented a CI/CD pipeline using Jfrog Artifactory, Xray, and Pipelines to automate the build, test, and deployment of our software applications to AWS. This reduced our deployment time by 50% and improved our release quality by 20%.
- Designed and implemented Argo CD-based CI/CD pipelines for a large-scale microservices architecture, resulting in a 50% reduction in deployment time and a 20% increase in successful deployments.
- Responsible for on boarding Application teams to build and deploy their code using GitHub Jenkins, Nexus and Ansible.
- Led implementation of Azure Active Directory for single sign on, authentication, authorization, and Azure Role-based Access Control (RBAC).
- Deployed an OpenShift-based microservices architecture that improved the performance of a client's website by 50%.
- Configured and installed Prometheus and Grafana using Helm charts within an AKS cluster for monitoring and visualization of Kubernetes workloads.
- Experience in container orchestration with Docker, Kubernetes, and OpenShift, including cluster services, multi-tenancy, and troubleshooting.
- Proficient in containerization technologies like Docker and container orchestration platforms like Kubernetes, enabling seamless deployment and scaling of mobile app services in a microservices architecture.
- Worked with RedHat OpenShift Container Platform for Docker and Kubernetes, used Kubernetes to manage containerized applications using its nodes, ConfigMap, node-selector, Services, and deployed application containers as Pods.
- Familiar with all Kubernetes/OpenShift objects and components, including Istio-system, ingress controller, and kube-system.
- Worked on GIT to store the code and integrated it to Ansible Tower to deploy the playbook.
- Used Kubernetes to orchestrate the deployment, scaling, and management of Docker Containers.
- Creating a fully automated build and deployment Platform and coordinating code builds promotions and orchestrated deployments using Jenkins, Harness and GitHub.
- Worked on sandbox functionality, uploading patterns and quality policies in Veracode.
- Responsible for maintaining successful SonarQube and Veracode scans in Jenkins pipelines.
- Written Templates for Azure Infrastructure as code using Terraform to build staging and production environments. Integrated Azure Log Analytics with Azure VMs for monitoring the log files, store them and track metrics and used Terraform as a tool, Managed different infrastructure resources Cloud, VMware, and Docker containers.
- Implemented Azure Kubernetes service to deploy a managed Kubernetes cluster in Azure and create an AKS cluster in the Azure portal, with the Azure CLI.
- Creating a fully automated build and deployment Platform and coordinating code builds promotions and orchestrated deployments using Jenkins, Harness and GitHub.
- Successfully integrated White Source into the company's CI/CD pipeline, automating the scanning and monitoring of open-source components for security vulnerabilities.
- Creating Docker images and handling multiple images primarily for middleware installations and domain configuration.
- Build Jenkins jobs create Infrastructure from GitHub repositories containing Terraform code.
- Wrote Ansible playbooks in YAML to provision pre-prod environments consisting of Cassandra DB installations, WebLogic domain creations and several proprietary middleware installations.
- Utilized Kubernetes for the runtime environment of the CI/CD system to build, test deploy. Used Kubernetes to orchestrate the deployment, scaling and management of Docker Containers.
- Used Helm charts to package and deploy common applications in Kubernetes.

- Implemented continuous integration and continuous deployment pipelines in Jenkins using Ansible playbooks and plugins to automate deployment of multi-tier applications to Docker containers.
- Wrote Ansible playbooks in YAML to provision pre-prod environments consisting of Cassandra DB installations, WebLogic domain creations and several proprietary middleware installations.
- Installed and configured Dynatrace One Agent on application servers to enable full-stack monitoring of the environment.
- Created custom service detection rules in Dynatrace to automatically discover and monitor new services.
- Expertise in JIRA for ticketing and defect tracking, including configuring workflows, customizations, and plugins. Integrated Jenkins with JIRA, GitHub, and Maven.
- Used JFrog artifactory for storing all the docker images, used X-ray for scanning the docker images across all the client servers.
- Daily monitored production servers using Grafana and Prometheus which is integrated with Kubernetes, exceptions, and report to the team if something happens during standups.
- Use agile methodology throughout the project. Involved in weekly and daily bases release management.
- Used Dynatrace for monitoring the online banking website.
- Responsible for maintaining successful SonarQube and Veracode scans in Jenkins pipelines.
- Used Splunk APM for log aggregation and analysis on different application servers and integrating Splunk with Single Sign-On authentication and Service now ticketing tool.
- Monitored and troubleshooted Azure resources using Azure Monitor and Azure Log Analytics.
- Maintained and Debugged Code to meet the required standards by using SonarQube and used Selenium for testing purposes. Also, monitored system activities to optimize performance and ensure security of systems.

Environments: Git, GitHub, Azure Boards, Azure DevOps, Azure App Services, Azure Event Hub, Azure Databricks, Azure Application Insights, Azure Application Gateway, Azure DNS, Azure Security Groups, Azure Functions, Azure Landing Zone, Active Directory AD Services, Azure Monitor and Azure Log Analytics, Bitbucket, Maven, Python, Terraform, Docker, Jenkins, Harness, SonarQube, Check Marx, Twist lock, White Source, Black Duck, private container registry, OpenShift, Kubernetes, Istio, Helm, Rancher, GKE, Ansible, Azure Data Factory, Kafka, Prometheus, Grafana, Nagios, Dynatrace, ELK, Splunk, Jira, Groovy and Python

Client: Innominds Software Private Limited, India

Aug 2022– Jan 2023

Role: AWS/Azure DevOps Engineer

Responsibilities:

- Designed, developed and built medium to large-scale pipelines using multiple DevOps tools like **groovy, JIRA and Selenium** is required.
- Involved in creating the **CD/CI** pipelines to execute the functional tests as part of the build process using Jenkins.
- Worked on Microsoft Azure Cloud (Public) to give IaaS support to customers. Make Virtual Machines through Power Shell Script and Azure Portal. Overseen and Created Storage Account and Affinity Group in Azure Portal.
- Implementing Azure Logic Apps, Azure Functions, Azure Storage, and Service Bus Queues for large enterprise-level ERP Integration systems
- Optimized current **CI/CD** process and streamline automation effort for server provisioning and deployment
- Build and Deployment of the java applications on diverse environments like Dev, QA, **and UAT and Prod.**
- Used Ansible to document all infrastructures into version control and Used **Ansible** to document application dependencies into version control.
- Installed and configured **Jenkins**, creation of master and slave nodes to handle multiple builds. Installation of plug-in wherever required for the implementation of those builds.
- Created **YAML** templates and updated packages of various applications using **Ansible Playbooks.**
- Configured Jenkins pipeline for auto deployment through continuous integration (Jar build, AML creation, Integration test, contract test, performance test, deploy in Test environment and then into Production.

- Configured **AWS Identity** and Access Management (IAM) to securely manage AWS users & groups and used policies & roles to allow or deny access to **AWS resources**.
- Monitored and troubleshooted Azure resources using Azure Monitor and Azure Log Analytics.
- Implemented a Continuous Delivery framework using **Azure pipelines**, Azure DevOps.
- Analyzed on premise applications infrastructure and designed VM sizing and disk sizes in Azure cloud.
- Configured Service Connections in **Azure DevOps** to connect to Azure Subscriptions using the App registration (Service Principle) and Common library.
- Worked on configuration and deployment of instances on AWS environment and also familiar with EC2, Cloud watch, Elastic Search and managing security groups on AWS.
- Experience with **Git lab CI/CD** tool for automating the **CI/CD** pipeline.
- Create and maintain highly scalable and fault tolerant multi-tier AWS and Azure environments spanning across multiple availability zones using Terraform and CloudFormation.
- Designed AWS Cloud Formation templates to create custom sized **VPC, subnets, NAT** to ensure successful deployment of Web applications and database templates.
- Worked with Configuration Management automation tool Ansible and has worked on integrating Ansible **YAML Scripts**.
- Responsible to develop and execute the functional test cases using **groovy and cucumber**.
- Involved in analyzing the stories, developing the Test Strategy, Preparing the Test Plans, Executing Tests and Automation using **Selenium and TestNG**.
- Involved in GUI, Functional, Interface, Regression, Integration and **User Acceptance Testing**.
- Supported test automation and deployment strategy to optimize service performance and ensure product quality
- Helped my team integrating the project into the **AWS**.
- Worked extensively with Ansible in production environments.
 - Consumed **REST services** in UI service layer with the help of http and resource providers.
- Regularly participated in Technical and Used Case review meetings for various functionalities in the application.
- Developed keyword driven and data driven frameworks to retrieve test actions, test data from excel files and **SQL databases**.
- Involved in planning, preplanning and stand-ups sessions of the Sprint.
- Involved in **Debugging** the Production P1 and P2 issues and resolving them with permanent fixes.
- Managed deployment to different environments using Jenkins and helped team by unblocking them resolving the pipeline issues.
- Involved in creating the **CD/CI** pipelines to execute the functional tests as part of the build process using Jenkins.
- Ran Complex **Oracle queries** for Data Analysis and Reporting.
- Worked on container orchestration tool Docker and deployment tool as Kubernetes. Defined Docker File for application image and **YAML files** for deployment.
- Created interactive prototypes and UI specifications including screen layouts, color palettes and user interface elements.
- Helped the team in analyzing the P0 and P1 issues and assisted in fixing them.
- Involved in Interface Testing (**API testing**) and ensured data and control are working properly between middleware and backend systems using complex Application Programming Interface (**API**).

Environment: Jenkins, GIT, Azure, AWS, ANT, MAVEN, JIRA, Python, WebLogic, BASH & KORN Shell, JAVA/J2EE, WebSphere.

Client: Beyond Soft Solutions, India
Role: DevOps Cloud Engineer

Sept 2021 – Aug2022

Responsibilities:

- As a DevOps Engineer, I am responsible for managing and maintaining Continuous Integration and Continuous Deployment (**CI/CD**) pipeline for a fast-paced robust application development environment. Responsible for maintaining the infrastructure in **AWS** using automation.
- Experience developing different types of **Azure functions** such as Http trigger, Timer trigger, Durable functions, Service bus trigger, Event-Hub trigger, and many others.
- Experience in Incident Management / Process & Project management using **SBM** Team Track.
- Expertise in writing Docker files for **.Net, java, node JS, React JS** applications, build and push docker images to Azure container registry.
- Coordination between multiple teams for the Project/Release goal.
- Assist Business to finalize business requirements.
- Experience in coordinating Onsite-Offshore model.
- Worked on database objects.
- Experience in reviewing and analyzing Business Requirements and creating Project plan / Resource forecasting /estimation.
- Project Management meetings/Release planning / WSR and client presentations.
- **SVN/GIT** repo management, build & code management for **CVS**.
- Build automation /management/scheduling using Quick build/Jenkins
- Developing/managing Jenkins **CI/CD** pipeline for different projects
- **Control M** job configuration/scheduling / issue triaging
- Environment build/support for Development & QA.

Environment: Java, J2EE, Ant, Maven, Azure, Jenkins, TFS, Perforce, AWS, Cruise Control, Web Logic, Shell, Perl, Oracle 8.x, Windows, Servlets, PL SQL.

Client: Zensar technologies, India

June 2019– Sept 2021

Role: Devops Engineer

Responsibilities:

- Handled the configuration of servers for specified applications on Amazon EC2 Cloud Servers using Linux Amazon Machine Images (AMI).
- Wrote custom cookbooks for automating components that are not available in marketplace.
- Delivered solutions to improve the CI/CD pipeline process, cloud architecture, deployment for AWS Private and Public Cloud and automate the agile methodologies.
- Delivered support for many AWS Services like EC2, EBS, S3, Cloud Watch, Cloud Front, IAM, Security Groups, Auto-Scaling AWS CLI and Cloud Watch monitoring, creation and updating.
- Operated on configuration management tool Chef for Continuous Delivery and rewritten recipes for new environments.
- Automated weekly releases with ANT/Maven scripting to compile, debug Java code and placing builds into Nexus repository.
- Integrated Chef cookbooks into Jenkins jobs for continuous delivery framework by writing Chef cookbooks and recipes to automate the deployment process.
- Installed, configured and automated the Jenkins build jobs with AWS deployment pipelines using various plugins like Jenkins-EC2 plugin and Jenkins-Cloud Formation plugin.

Environment: AWS - EC2, S3, EBS, VPC, IAM, AWS CLI, Cloud Formation, CloudWatch, SVN, GIT, Jenkins, Chef, Ant, Maven, Nexus, Linux, Ruby, Perl, Shell Scripting, Python, JBOSS, WebLogic, Apache.
