EDUCATION

Master of Science in Computer Science, Indiana University Bloomington, IN, USA **GPA: 3.80 / 4.00**
Courses: Applied Algorithms, Software Engineering, Object Oriented Software Development, Machine Learning Aug 2023 – May 2025

Bachelor of Engineering in Computer Engineering, Gujarat Technological University, Gujarat, India **GPA: 3.87 / 4.00**
Courses: Data Structures and Algorithms, Database Management Systems, Theory of Computation Aug 2018 – Jun 2022

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C#, Java, C, C++, Bash (Shell Scripting), HTML/CSS
Frameworks: Angular, React, Node.js, React Native, .NET 6, HTML, CSS, TailwindCSS, Django, Flask
Cloud / DevOps: AWS (EC2, RDS, Lambda, API Gateway), Azure, GitHub Actions, Docker, Kubernetes, Jenkins
Database & Tools: SQL Server, PostgreSQL, MongoDB, Redis, Git, GitHub, GitLab, Selenium, BeautifulSoup, FastAPI, Postman

WORK EXPERIENCE

Cummins | Software & DevSecOps Intern | Columbus, Indiana May 2024 – Aug 2024

- **Developed and launched full-stack self-service portal** for 500+ internal users by building a modern **Angular 17 frontend** and **Python-based backend services**, reducing request fulfillment time from 6–8 months to on-demand; cutting manual intervention by **80%**.
- **Designed dynamic, user-friendly Angular 17 frontend** capturing 20+ request parameters, streamlining workflows and eliminating lengthy stakeholder back-and-forth.
- **Automated backend processing using Python integrated with Jenkins, GitLab APIs, and shell scripts** to parameterize security scans, dynamically **configure Jenkins files**, and provision pipelines end-to-end.
- **Collaborated cross-functionally** with infrastructure teams to ensure secure deployments, configuring networking (NLBs, DNS, reverse proxies) in compliance with enterprise standards.
- **Delivered \$250K–\$1M in annual operational savings** by replacing a budget-heavy, multi-stakeholder process with an automated, self-service solution.

Thomson Reuters | Software Engineer | Gujarat, India Jan 2022–Jul 2023

- **Architected and led development** of a predictive delivery & capacity planning tool using **Angular (frontend), .NET C# APIs, OData, and Azure DevOps**, delivering simplified velocity, productivity, quality, and backlog-runout dashboards for executive decision-making.
- **Drove data-driven resource optimization** through **backend** data processing in **.NET C#**, achieving ~7% throughput improvement, ~20% defect reduction, and ~\$2.9M in annual savings across 10 Agile teams.
- Integrated **Azure Cognitive Search** into Onvio Tax product (**.NET C# APIs + Angular UI**), enabling fast, scalable search designed to support 50K+ users and 1M+ VAT records, with HMRC-compliant security and audit readiness.
- Migrated frontend from **Angular v9 to v14**, replacing legacy components with **Bento UI** and refactoring complex UI flows. Resulted in **fewer front-end defects** and improved dev onboarding time due to cleaner, modular code structure.
- Built CI/CD pipelines with **Jenkins, Git, Azure, and Datadog**, automating test deployments and integrating **health checks** to validate service readiness, achieving **95% success rate in staging** and cutting manual release validation time by **50%** in prelaunch QA cycles.

GFutureTech Pvt. Ltd. | Software Engineer | Gujarat, India Jun 2021–Oct 2021

- Programmed **web scrapers** using **BeautifulSoup** to process **10K+ daily data points**; automated social media workflows with **Selenium**, cutting manual effort by **90%**.
- Developed secure, well-documented RESTful APIs with **Flask**, featuring auth, **rate limiting using Redis**, and **80% test coverage**; improved app performance by resolving **200+ critical issues** and shipping **dynamic JS features**.
- Engineered real-time **Twilio SMS alert system** with usage dashboards and intelligent throttling for website monitoring and rapid incident response.

PROJECTS

Acquire Game — Microservices Implementation | Java Spring Boot, React Native, Cosmos DB, WebSockets

- Built microservices-based multiplayer board game with live updates using WebSockets.
- Used Factory Pattern for bot strategies and Cosmos DB for real-time sync, ensuring smooth gameplay.

Scribbie — AI-Powered Call Analyzer | React, Node.js, Tailwind, AssemblyAI, MistralAI

- Built real-time call analyzer with >95% accuracy using AssemblyAI and NLP, enabling efficient support analysis.
- Designed sentiment dashboard with exportable reports and integrated prompt-based LLM insights.

APIShield — Secure API Gateway | FastAPI, Python, Swagger UI, Github Actions, OAuth2, AWS Lambda

- Developed secure API with OpenAPI docs, JWT auth, rate limiting, and GitHub Actions CI/CD.
- Deployed serverless architecture using AWS Lambda and Gateway for scale and efficiency.
