Oakland, CA | 510-467-2097 | lopezadrian510@gmail.com | [linkedin.com/in/adrian-ceja-lopez](https://www.linkedin.com/in/adrian-ceja-lopez)

EDUCATION

San Francisco State University <i>Bachelor of Science in Applied Mathematics</i>	San Francisco, CA Aug. 2020 – May 2025
San Francisco State University <i>Undergraduate Certificate in Data Science and Machine Learning for Biotechnology</i>	San Francisco, CA Aug. 2024 – May 2025

WORK EXPERIENCE

Instructional Assistant <i>Laney College, Math Lab</i>	October 2025 – Oakland, CA
- Oversaw the hiring process for math tutors, including application review, interview coordination and candidate evaluation. - Designed and maintained scheduling systems to ensure tutor coverage across multiple math courses. - Streamlined administrative workflows by tracking tutor availability, student demand, and schedule adjustments.	
Math Tutor & Teaching Assistant <i>Laney College</i>	Aug. 2022 – July 2025 Oakland, CA
- Supported instruction for over 30 students per semester, reinforcing key Calculus Concepts through interactive problem-solving sessions. - Delivered one-on-one and group tutoring during office hours, resulting in a 25% average increase in student exam scores. - Integrated student feedback and performance data to continuously adapt support strategies and enhance teaching effectiveness. - Engaged in ongoing professional development activities, including workshops, seminars and training sessions to enhance teaching effectiveness.	
Data Transformation Specialist <i>San Francisco State University, Alumni Relations</i>	October 2024 – August 2025 San Francisco, CA
- Mapped and reconciled non-matching fields across multiple Excel sheets to ensure accurate cross-referencing of data. - Automated data validation and lookup processes, improved reporting accuracy and reduced manual entry time by 50%. - Managed alumni questions via email and ticketing system, ensuring all questions were addressed clearly and promptly.	

PROJECTS

Detection of Acute Lymphoblastic Leukemia <i>Python, SQL, TensorFlow, Scikit-learn</i>	March 2025 – May 2025
- Built a deep learning pipeline using Python, TensorFlow, and Keras to classify blood smear images as leukemic or normal. - Leveraged SQL to query and manage metadata associated with image samples, enabling efficient filtering, labeling, and tracking of dataset versions. - Applied transfer learning with ResNet-50 and EfficientNet-B0, fine-tuning pre-trained models on a curated dataset of 2,586 labeled images. - Evaluated model performance using accuracy, precision, recall, F1-score, and ROC-AUC; visualized predictions with Grad-CAM heatmaps.	
Correlation Between Diabetes and Alzheimer's Disease <i>Python, pandas</i>	Aug. 2024 – Dec. 2024
- Investigated the relationship between diabetes and Alzheimer's using a clinical dataset from Kaggle, focusing on demographic, lifestyle, and biomarker features. - Cleaned and preprocessed data using Python (Pandas, NumPy), removing non-essential columns and handling class imbalance through to upsample minority classes. - Engineered a balanced dataset and applied feature selection to prevent data leakage and improve model generalization.	

Insurance Coverage for Eating Disorder | *Python, SQL, pandas, Numpy, Matplotlib* June 2024 – July 2024

- * Conducted exploratory data analysis on insurance claim denials using Python (Pandas, NumPy, Matplotlib) and SQL, working with real-world healthcare datasets provided by IFEDD.
- * Engineered custom data pipelines to clean and normalize inconsistent entries across insurance providers, enabling accurate aggregation of denial reasons and plan types.
- * Used SQL queries to calculate denial percentages, group data by state and plan, and extract insights on public vs. private insurance behavior.
- * Automated analysis scripts and visual output generation using Python's file I/O and conditional logic to streamline reproducibility and reporting.

TECHNICAL SKILLS

Languages: Python, SQL (Postgres), Excel, R, Matlab

Software Tools: Linux, Github, VS Code, Jupyter Notebook, Google Colab

Developer Tools: Git, Docker, VS Code, Visual Studio, TensorFlow, CNN

Libraries: Power BI, pandas, NumPy, Matplotlib
