Professional Summary

IT professional with over 14+ years of experience. Skilled in managing Exchange environments, including Exchange 2013, 2016, 2019, and Exchange Online (M365), with extensive experience in hybrid configurations. Proficient in ADFS, AADC, and Active Directory, with the ability to interact with and manage these systems effectively. Adept in email security, ensuring protection against threats. Experienced with Microsoft Teams, OneDrive, SharePoint, and Intune, utilizing PowerShell scripting for automation and management. Strong expertise in Microsoft Azure, contributing to optimized cloud and endpoint management.

Technical Skills

Microsoft Exchange Online | Administration | Hybrid Configurations | Migrations | Security | Microsoft Teams | Setup | Governance | Direct Routing | Compliance | SharePoint Online | Administration | Permissions | Site Collections | OneDrive for Business | Sync | Security | Compliance | Microsoft 365 Defender | Defender for Office 365 | Defender for Endpoint | Defender for Identity | Microsoft Purview | Compliance | Data Loss Prevention | eDiscovery | Retention Policies | Azure Active Directory | Identity Management | Conditional Access | MFA | SSO | Intune | Endpoint Management | Compliance Policies | Application Protection | Mobile Device Management (MDM) | Mobile Application Management (MAM) | Windows Autopilot | Microsoft Entra ID | Role-Based Access Control (RBAC) | PowerShell | Scripting | Automation | Exchange Online PowerShell | Graph API | Security & Compliance Center | Microsoft 365 Tenant-to-Tenant Migrations | Hybrid Deployments | Zero Trust Security | Azure AD Connect | Active Directory Federation Services (ADFS) | Email Security | DKIM | DMARC | SPF | Microsoft 365 Licensing | Governance & Compliance | Microsoft Power Platform | PowerApps | Power Automate | Power BI | Dataverse | Microsoft Viva | Microsoft Copilot | Collaboration Tools | Identity Protection | Threat Hunting | Incident Response | Secure Score Optimization | Microsoft Sentinel | SIEM Integration | ServiceNow Integration | ITIL Processes | Change Management | Incident Management | Troubleshooting & Root Cause Analysis.

Professional Experience

Bank of America, Addison, TX
Sr Microsoft 365 Engineer

May 2023 - Present

- Managed Microsoft 365 user accounts, licenses, and security settings to ensure secure access and compliance.
- Administered Exchange Online, SharePoint, and Teams, handling configurations, permissions, and troubleshooting.
- Monitored and maintained Microsoft 365 services, applying updates, policies, and security best practices.
- Diagnosed and fixed complex M365 issues using PowerShell, logs, and admin portals for quick resolution.
- Handled escalated L3 support cases, investigating service disruptions, security issues, and user access problems.
- Troubleshoot sync issues in Azure AD Connect using Metaverse to maintain accurate directory object synchronization.
- Implemented OU/attribute-level filtering in AD sync to optimize Entra ID (Azure AD) directory data management.
- Automated identity provisioning, de-provisioning, and service management tasks using PowerShell scripting.
- Defined and enforced directory structures, security policies, and naming conventions across Azure and M365.
- Set up and tested Microsoft Copilot for Outlook and Teams, ensuring secure and functional deployment.
- Provided L3 support for Azure tenant services, directory, and identity management, troubleshooting complex issues and RCA.
- Developed and maintained SOPs for Azure & M365, collaborating with teams to implement technical solutions.
- Managed GAL segmentation in Exchange Online, ensuring secure, policy-compliant address list access for user groups.
- Conducted message header analysis in Exchange & Outlook to diagnose email issues, spam, phishing, and routing delays.
- Applied retention tags and policies in Exchange to automate email retention, archiving, and deletion.
- Managed SharePoint Online sites, permissions, libraries, and workflows, ensuring secure collaboration and compliance.
- Configured and optimized SharePoint Online for document management, integrating with OneDrive and Teams.
- Automated SharePoint tasks using PowerShell, including site provisioning, user management, and security settings.
- Led advanced eDiscovery deployment in M365, configuring legal holds, case management, and data retrieval.
- Configured and managed Exchange Online Protection (EOP) to filter spam, malware, and phishing emails for enhanced security.
- Implemented Microsoft Defender for Office 365 policies to enhance email security, phishing, and malware protection.
- Designed and enforced DLP policies in M365 to prevent data leaks and ensure compliance with security regulations.

- Configured Microsoft Defender for Cloud to provide real-time threat intelligence and vulnerability management.
- Used Microsoft 365 Compliance Center to automate audit logs, retention policies, and investigation tools for compliance.
- Configured and managed SMTP relay for secure email flow between on-premises servers and Microsoft 365.
- Utilized Microsoft Graph API to automate and integrate Microsoft 365 services, including user management and data retrieval.
- Integrated Defender for Identity to detect identity threats, analyze account activity, and enable real-time incident response.
- Configured Copilot features, managing licenses, permissions, and APIs for smooth Outlook and Teams integration.
- Conducted Copilot performance testing to analyze responsiveness and accuracy in Outlook emails and Teams chats.
- Integrated Azure Log Analytics for real-time monitoring, security, and performance insights across M365 and Azure.
- Deployed Azure services for M365 workloads, including Exchange Hybrid, SharePoint, OneDrive, and Teams.
- Provided guidance on Azure policies like Defender for Cloud, PIM, and RBAC to enhance M365 security and governance.
- Managed Azure licensing to ensure proper deployment, compliance, and allocation across Microsoft 365 workloads.
- Managed and configured Microsoft Viva to enhance employee engagement, insights, and learning within Microsoft 365.
- Configured Information Governance & Data Retention in M365 to archive, delete, and preserve corporate data securely.
- Developed data classification and labeling policies to protect sensitive data per organizational and regulatory standards.
- Used Microsoft Information Protection (MIP) to automate sensitivity labeling across emails, documents, and M365 data.
- Managed Microsoft Purview for data discovery, classification, and compliance tracking to enforce governance policies.
- Conducted audits via Purview to assess data lifecycle, retention policies, and compliance across M365.
- Configured ADFS claims rules to enforce access control and enhance security.
- Designed and implemented IAM solutions with Azure AD, enabling secure Single Sign-On (SSO) for enterprise apps.
- Configured Conditional Access policies to enforce role-based security based on risk level and device compliance.
- Strengthened IAM by deploying MFA to secure identities and prevent unauthorized access.
- Integrated Conditional Access for secure M365 access, using device compliance, user location, and threat intelligence.
- Deployed Azure Registered Apps with automated authentication via certificates and secrets for secure integration.
- Provided technical support, troubleshooting critical systems, and training users on enterprise data security.
- Created PowerShell scripts and utilities to automate system tasks, reducing manual effort and boosting efficiency.
- Partnered with engineering teams on new M365 initiatives, assisting in testing, validation, and complex issue resolution.
- Created engineering documentation, including solution designs, test plans, and architectural diagrams for stakeholders.
- Created interactive reports and dashboards in Power BI, integrating data from multiple sources for insights and decision-making.
- Designed and automated workflows using Power Automate, streamlining processes across M365 and third-party applications.
- Designed and deployed identity services with MFA, federated identities, Azure Key Vault, and AAD for secure authentication.
- Developed PowerShell scripts for user management, reporting, security policies, and bulk operations in Exchange and Entra ID.
- Managed MS Intune for device compliance, app protection, and policy enforcement across Windows, iOS, and Android devices.
- Configured Intune MDM and MAM policies, ensuring secure endpoint management and data protection.

BNY Mellon, New York, NY
Microsoft 365 Engineer

Nov 2021 – May 2023

- Administered M365 cloud services, including Exchange Online, SharePoint, Skype for Business, and Teams.
- Deployed and managed M365 apps like SharePoint, and Teams across multiple devices and locations.
- Handled M365 administration, including user/license management, migrations, security, compliance, and troubleshooting.
- Automated M365 tasks using PowerShell and Graph API for efficient administration.
- Configured Outlook settings via Configuration Manager (CM) to ensure optimized email experiences.
- Managed Org Relationships with external tenants to enable Free/Busy sharing and calendar availability.
- Configured and maintained the Global Catalog in AD to enhance authentication and directory lookup performance.
- Developed custom sync rules and managed Azure AD Connect staging/production servers for directory sync.
- Configured B2B/B2C collaboration in Azure AD for secure external access and integrating external identities.
- Managed Security Groups, Distribution Groups, and all Exchange mailbox types for efficient mail flow and administration.
- Resolved SharePoint Online issues, created/configured Team & Communication sites and managed permissions.
- Utilized AvePoint Fly Migration to efficiently transfer SharePoint data, ensuring smooth content and settings migration.
- Managed M365 Hybrid for 30K+ users, providing support and root cause analysis for complex issues.
- Utilized Binary Tree tool for tenant-to-tenant and Exchange migrations, ensuring efficient mailbox and data transfers.
- Managed AD user accounts, ensuring accurate object attributes, group memberships, and permissions for organizational needs.
- Designed and deployed PowerApps, Power Automate, and Power BI solutions for business process automation and reporting.
- Configured Power Platform to integrate with M365 services like SharePoint, Teams, and OneDrive for enhanced collaboration.
- Enforced Power Platform governance with DLP policies, tenant-wide settings, and RBAC for security and compliance.

- Managed Barracuda backup solutions, ensuring reliable data protection, quick recovery, and efficient backup operations.
- Configured and managed Proofpoint for email security, including spam filtering, DLP, and threat protection.
- Monitored and analyzed Proofpoint logs to detect and mitigate phishing, malware, and email-based threats.
- Deployed and configured domain controllers to ensure high availability and efficient directory services management.
- Configured claims-based authentication for SSO integration with specific applications.
- Managed and configured VoIP solutions, ensuring seamless integration with Microsoft Teams and Skype for Business.
- Troubleshoot VoIP call quality, connectivity, and SIP trunk issues to optimize communication performance.
- Implemented Exchange patch management, applying cumulative updates to maintain security and stability.
- Utilized EOP and Defender for advanced email security, protecting against spam, malware, and phishing threats.
- Managed Azure AD IAM roles via RBAC, ensuring least privilege access and secure identity management.
- Migrated legacy IAM systems to Azure AD, enabling M365 and third-party app integration.
- Deployed Azure AD PIM for just-in-time role elevation, enhancing identity security and governance.
- Implemented Purview Insider Risk Management to detect and mitigate security risks through user activity analysis.
- Integrated Purview with compliance workflows for automated data classification and regulatory protection.
- Linked data classification with MCAS to monitor and secure sensitive cloud-stored information.
- Configured M365 sensitivity labels to enforce classification and protection for emails and documents.
- Utilized Purview DLP to monitor and restrict sensitive data movement, improving compliance.
- Managed email compliance using eDiscovery and content search for legal and regulatory adherence.
- Developed DLP policies in Microsoft Defender to prevent data exposure and enforce security.
- Configured test environments for controlled M365 feature trials and proactive issue resolution.
- Analyzed delegate and protocol reports to enhance email system performance and security.
- Troubleshoot ADFS authentication failures, ensuring smooth identity federation.
- Configured Azure Conditional Access Policies to enforce risk-based access controls.
- Implemented Azure Sentinel for real-time threat detection and security analytics, improving incident response.
- Managed Intune for device/app management, overseeing enrollment, policies, and compliance enforcement.
- Configured Intune Conditional Access to restrict access based on device compliance and user risk levels.
- Managed and resolved incidents and service requests in ServiceNow, ensuring efficient ITSM workflows and ticket handling.

Scripps Health, San Diego, CA
Office 365 / Exchange Engineer

May 2018 – Oct 2021

- Administered and optimized the Office 365 ecosystem, ensuring smooth collaboration, security, and compliance across Exchange Online, Teams, and SharePoint.
- Managed identity, security, and governance in Office 365, implementing policies, automation, and integrations to enhance productivity and data protection.
- Managed and maintained Exchange Online, SharePoint Online, and OneDrive for Business, Teams Online, Purview Information Barriers, and Azure Active Directory.
- Provided Tier III support for troubleshooting issues related to Office 365, VoIP systems, and Azure Active Directory.
- Troubleshoot and resolved issues related to user access and email flow within Microsoft Exchange Online.
- Oversaw large-scale migration projects to the Microsoft 365 ecosystem for enterprise clients, including support, maintenance, and expanding the adoption of Azure AD and its associated tools and services.
- Managed Exchange 2016/2019 as well as Exchange Online, handling various administrative tasks and configurations.
- Managed attribute management for Office 365 identities, including user objects, Office 365 Groups, shared mailboxes, and license management.
- Used Quest Migration Tool for tenant-to-tenant and Active Directory migrations, ensuring data integrity and minimal downtime.
- Managed BitTitan MigrationWiz for cross-tenant and cloud migrations, automating email and file transfers with pre- and post-migration validation.
- Configured and managed email authentication protocols, including DomainKeys Identified Mail (DKIM), Domain-based Message Authentication, Reporting & Conformance (DMARC), and Sender Policy Framework (SPF) for Office 365 and Exchange Online.
- Utilized Proofpoint to secure and manage email communications, including email gateway security, encryption, Data Loss Prevention (DLP), and Advanced Threat Protection (ATP).
- Simulated different user scenarios in the test tenant to assess the impact of updates, new features, and policy adjustments, ensuring stable and compliant deployments.
- Customized Microsoft Purview policies to classify and monitor data across multi-cloud environments, providing comprehensive insights into data usage patterns and enhancing cross-platform compliance.

- Implemented advanced functions of the Office 365 Security and Compliance Center, including Azure Information Protection (AIP), ATP, mail flow rules management, DNS record management, Exchange Online Protection, spam and security controls.
- Led migration projects for transitioning email from on-premises Exchange or hosted environments to Exchange Online through various migration methods.
- Acted as Technical Lead for migrating from G Suite to Office 365, overseeing the transition and ensuring successful adoption.
- Migrated SharePoint Sites from on-premises environments to SharePoint Online using Sharegate, ensuring data integrity and continuity.
- Configured and managed OAuth for secure authentication and authorization between Office 365 services and third-party applications.
- Set up and managed MS Exchange Hybrid environments, facilitating migration of mailbox tenants.
- Developed and managed Azure access Role-Based Access Control (RBAC) permission models for security teams and service tiers.
- Provided support for Azure cloud infrastructure, including new server projects, backup strategies, and onboarding new companies into OneDrive and Office 365.
- Configured IAM with SAML-based Single Sign-On (SSO) to integrate third-party applications with Azure AD, ensuring secure authentication.
- Served as Lead Engineer for Azure AD Connect and Active Directory Federation Services (ADFS), overseeing the integration and management of hybrid deployments.
- Maintained and managed Azure Active Directory in a multi-forest/domain infrastructure, focusing on authentication and authorization principles.
- Engineered, deployed, operationalized, and supported tools associated with Azure Active Directory.
- Developed and updated PowerShell scripts to facilitate Azure AD operations and administration.
- Experienced in managing Microsoft Intune tenants and Mobile Device Management (MDM), overseeing configuration, policy application, and device management.
- Managed Microsoft Defender for Endpoint, ensuring comprehensive endpoint security and threat protection.

Tech Data, Clearwater, FL
Office 365 Administrator

Jan 2015 - April 2018

- Administered and maintained Office 365 tenant configurations, including subscription management, license allocation, and service settings.
- Conducted regular health checks and performance monitoring of Office 365 services, proactively identifying and addressing issues.
- Configured and maintained security and compliance features within Office 365, such as Data Loss Prevention (DLP) policies.
- Built and maintained a Microsoft 365 test tenant to validate changes before applying them in the live environment.
- Executed Exchange 2010/2013 to Exchange Online migrations using Hybrid Configuration Wizard (HCW) and staged/cutover migrations, ensuring minimal downtime.
- Migrated SharePoint 2013/2016 sites to SharePoint Online using Sharegate and PowerShell, preserving permissions, metadata, and workflows.
- Utilized BitTitan MigrationWiz for mailbox, OneDrive, and SharePoint migrations, ensuring efficient data transfer and minimal disruption.
- Led OneDrive for Business migrations from on-prem file shares and legacy cloud storage, utilizing Microsoft SharePoint Migration Tool (SPMT) for seamless data transfer.
- Managed Skype for Business to Microsoft Teams transition by configuring coexistence modes, interoperability policies, and user training before full Teams adoption.
- Handled day-to-day operations for Exchange, addressing and resolving issues as they arose.
- Configured and managed mailbox quotas and permissions in Exchange Server 2010, including mailbox creation, modifications, and shared mailboxes.
- Administered and maintained Exchange Server 2010 & 2013 environments via Exchange Management Console (EMC) and Exchange Management Shell (EMS).
- Administered Cisco IronPort for email security, managing anti-spam, anti-virus, and encryption policies.
- Assisted in the implementation and administration of Microsoft Exchange Server and Office 365 Exchange Online, managing email flow, user accounts, and security.
- Executed migration projects involving data and user accounts from legacy systems to Office 365.
- Configured and managed Active Directory domains, users, groups, organizational units, and security policies.
- Troubleshooted and resolved Active Directory replication and authentication issues, ensuring directory integrity and user access.

- Implemented and managed Azure Active Directory for Single Sign-On (SSO) and user authentication.
- Configured and administered Microsoft Teams settings, including team creation, channel management, and integration with other Office 365 services.
- Handled day-to-day operations for Skype for Business and Microsoft Teams, troubleshooting and resolving issues as needed.
- Managed and optimized SharePoint Online and OneDrive for Business, including site creation, permissions management, and user support.
- Managed Office 365 applications and services, including OneDrive for Business, ensuring optimal performance and user support.
- Created and maintained SharePoint sites, user profiles, workflows, lists, libraries, and content types for effective content management.
- Debugged and troubleshoot client-side and server-side SharePoint issues, ensuring stable operations.
- Designed, implemented, and maintained SharePoint server farms in on-premises and Azure cloud environments.
- Provided end-user training and support on SharePoint usage, improving adoption and productivity.
- Designed and implemented solutions integrating Office 365 and OneDrive for Business, enhancing workflows and collaboration.
- Designed and implemented PowerShell scripts to automate IT processes, including system automation, report generation, and software deployment.
- Utilized PowerShell to automate SharePoint tasks such as site provisioning and user management.
- Diagnosed and resolved PowerShell script errors, ensuring smooth execution and minimal disruptions.
- Implemented security patches, service packs, and software updates to maintain system stability and security.
- Managed Microsoft O365 licenses for users, ensuring effective utilization and compliance with organizational requirements.

SunTrust Bank, Atlanta, GA

Nov 2013- Dec 2014

System Engineer

- Extensive experience in managing, configuring, and troubleshooting both Windows and Mac operating systems to ensure optimal performance and security.
- Administered Active Directory environments, including user account creation, permission granting, and profile configuration. Provided access control and managed permissions for file servers to ensure secure data access and compliance with organizational policies.
- Implemented and configured Windows Server environments, including versions 2008 R2, 2012 R2, and 2016. Managed server roles and services such as FTP, DNS, DHCP, and TFTP to meet client-specific requirements and ensure network functionality.
- Diagnosed and resolved issues related to Local Area Network (LAN) and Wide Area Network (WAN) infrastructures to maintain reliable network connectivity and performance.
- Handled hardware-related issues including disk drive failures, memory malfunctions, battery issues, and Smart Array controller problems.
- Utilized HP Management and Dell OpenManage Console tools for hardware diagnostics and repairs.
- Installed, configured, and maintained System Center Configuration Manager (SCCM) infrastructure, including primary and secondary sites, to streamline software distribution, patch management, and system updates.
- Administered Dell and HP blade servers, rack servers, and storage solutions within client data centers, ensuring effective management and maintenance.

JB Hunt, Lowell, AR

Jan 2010- Oct 2013

Windows Admin

- Installed, configured, and provided technical support for Windows Server 2008 R2, ensuring proper setup and ongoing functionality.
- Designed, configured, and maintained Active Directory (AD) services on Windows Server 2008, implementing effective directory management and user authentication.
- Created and administered user accounts, groups, and security policies, managing access controls and ensuring compliance with organizational security standards.
- Installed, configured, and managed VMware ESXi hosts and vCenter Server, optimizing virtualized infrastructure for performance, scalability, and reliability.
- Created and deployed software packages and updates using SCCM, including application packaging, distribution, and reporting to ensure timely and accurate software delivery across the organization.
- Installed, configured, and supported Microsoft Windows operating systems, including Windows 7 and Windows 8, to meet user and business needs.
