SUMMARY

Data Analyst with 3+ years of experience in leveraging Python, SQL, and cloud platforms (AWS, Azure) to build scalable data solutions. Proficient at developing ETL pipelines, predictive models, and interactive dashboards to enable data-driven decision-making. Proven ability to enhance operational efficiency, optimize business processes, and deliver actionable insights using advanced analytics and machine learning.

SKILLS

Methodologies: Agile, SDLC, Waterfall

Programming Languages: Python, SQL, R, SCALA

Libraries: Pandas, NumPy, Pytorch, TensorFlow, Scikit-Learn, seaborn, Matplotlib, SciPy, Plotly

Database: Microsoft SQL Server, Oracle Database, PostgreSQL, MongoDB

Statistical Analysis: Hypothesis Testing, A/B Testing, Regression Analysis, Descriptive Statistics

ETL Tools: Alteryx, Talend, SSIS (SQL Server Integration Services), dbt

Project Management Tools: Jira, Microsoft Project, Trello, Asana

Data Visualization: Tableau, Power BI, Microsoft Excel (advanced)

Big Data Technology: Hadoop, Apache Spark, Apache Kafka, Databricks

Cloud Platforms & DevOps: AWS, Microsoft Azure, Snowflake

Soft Skills: Critical thinking, problem-solving, Attention to detail, Data storytelling, Collaboration with cross-functional teams

PROFESSIONAL EXPERIENCE

Data Analyst | PNC, Virginia

May 2025 - Current

- Utilized **Python (pandas, NumPy)** and **SQL (MySQL, PostgreSQL)** to clean and analyze operational data, enabling the team to identify process improvement opportunities.
- Leveraged **Python** and **SQL Server** and **Kafka**, to analyze real-time transaction data from wealth management systems, identifying process bottlenecks and implementing automated monitoring that reduced processing errors.
- Conducted statistical analysis and time series forecasting using **R** and **Jupyter Notebook**, developing predictive models for client behavior and attrition risks in the Private Wealth Management segment, supporting the Operations team's efforts to anticipate future trends.
- Designed and maintained interactive **Tableau** dashboards tracking key operational metrics (processing time, error rates, transaction volume), enabling real-time performance monitoring and contributing to a 25% improvement in team response time.
- Collaborated with Technology team to streamline data integration processes using **Snowflake**, reducing report generation time by 60% and improving data accuracy for operational decision-making.

Data Analyst | Vivma Software Inc, India

August 2021 – July 2023

- Utilized **Azure Cloud** and **Hadoop** ecosystem for large-scale data storage and analysis, collaborating with the IT team to ensure secure data access and processing from 100+ dermatology clinics across the network.
- Developed and optimized **Apache Spark** applications using **PySpark** to process and standardize large volumes of CSV files from diverse clinic management systems, improving data consistency and reducing processing time by 70% compared to previous Python scripts.
- Created and maintained **SQL** queries for regular and ad-hoc reporting, delivering timely insights to stakeholders on key performance indicators such as patient visits and resource utilization.
- Designed interactive **Power BI** dashboards with time series forecasting to visualize clinic performance, enabling more frequent reporting cycles and improved operational planning.
- Led data process improvement initiatives by implementing automated data validation scripts in **Python** and creating standardized **ETL** workflows, which reduced manual data processing time, improved data quality through automated error checking.

EDUCATION

Master of Science in Computer Science | Lawrence Technological University, USA

December 2025

Bachelor of Technology in Computer Science | Malla Reddy Institute of Technology and Sciences, India

March 2023

ACADEMIC PROJECTS

AI-Powered Book Recommendation System: Designed an AI-based book recommendation engine leveraging GPT-4 with collaborative, content-based, and hybrid filtering models. Built scalable NestJS backend with RESTful APIs, RBAC, bcrypt authentication, and PostgreSQL database. Developed responsive React.js frontend with real-time personalized dashboards, AI-driven recommendations, and book transaction workflows.

Campus Events Web Application: Designed a full-stack campus event management application enabling students to discover events, RSVP securely, and track participation. Built component-based React and TypeScript frontend with Redux Toolkit, TanStack React Query, Axios, RESTful API integration, React Hook Form, and Yup validation, ensuring responsive accessible UI across all devices.

CERTIFICATIONS

- Cybersecurity Terminology Certification
- Data Analytics Essentials Certification
- Python for Machine Learning Certification
- Google Cloud Data Analytics Certification
