SUMMARY

Data Analyst with hands-on experience across the full analytics workflow, from SQL/Python data cleaning and validation to Power BI/Tableau dashboard development and stakeholder reporting. Skilled at translating raw transactional and operational data into clear, actionable business recommendations, with additional exposure to cloud-based ML pipelines (AWS).

TECHNICAL SKILLS

- Data & Analytics:** Power BI, Tableau, Excel, Power Query, KPI reporting, data visualization, data analysis, data processing, data validation, data cleaning, data warehousing, data modeling, statistics, Matplotlib, Seaborn, SAS
- Languages & Tools:** Python, SQL, Git, Jupyter Notebook, REST APIs, Jira, MS Office, PowerPoint
- Databases & Cloud:** PostgreSQL, Microsoft SQL, Snowflake, AWS (S3, SageMaker, Lambda, EMR/Spark, Athena, SNS)
- AI/ML:** XGBoost, NLTK, Keras, SageMaker, supervised learning, model evaluation
- Project Management:** Agile, Six Sigma, budget forecasting, EVM, stakeholder presentations, cross-functional collaboration, process improvement, decision-making

PROFESSIONAL EXPERIENCE

Data Analytics Intern | IBM SkillsBuild, India

Apr 2023 – Aug 2023

- Queried, validated, and analyzed a 5,190-record healthcare dataset using SQL, Pandas, and NumPy, profiling 13 variables and ensuring data completeness prior to analysis.
- Identified 4 statistically significant patterns from correlation matrices and built 8+ visualizations in Matplotlib and Seaborn to analyze patient segmentation by gender, insurance type, and health score, improving analysis clarity by 30%.
- Developed summary reports and data-driven recommendations combining SQL queries, statistical analysis, and visualizations to communicate healthcare utilization trends to stakeholders.

AI/ML Research Intern | INMOVIDU

Nov 2021 – Jan 2022

- Preprocessed and cleaned NLP training datasets using Python, handling null values, removing noise, and standardizing text inputs to ensure data quality and model reliability.
- Developed and optimized an NLP-based object detection model using NLTK and Keras, improving algorithm accuracy by 20% through iterative debugging and model refinement.
- Documented preprocessing steps and model iterations to support reproducibility and knowledge transfer within the research team.

Global Distributor & Team Lead (Part-Time) | Enagic Kangen, India

Dec 2022 – Jul 2024

- Delivered virtual and in-person training sessions to 300+ stakeholders, simplifying complex product information into clear, actionable presentations across a global audience.
- Developed and presented data-driven business reports to support management decisions on team performance, sales strategy, and workflow prioritization across a 10-member team.

KEY PROJECTS

Telecom Customer Churn & Retention Analytics | Power BI, DAX, SQL

May 2026

- Queried and modeled 7K+ telecom customer records with SQL and DAX in Power BI, analyzing demographics, contract types, tenure, and payment behavior to identify churn drivers.
- Identified a critical churn-risk window at 17 months tenure and significantly higher churn among monthly-contract customers, isolating the segments driving a 28.37% churn rate.
- Delivered data-driven recommendations, including long-term contract incentives and loyalty programs, to improve customer lifetime value and retention.

Customer Shopping Behavior Analysis | Python, PostgreSQL, SQL, Power BI

2026

- Cleaned and engineered features (age group, purchase frequency) on 3,900 customer transactions across 18 attributes using Python, then loaded the dataset into PostgreSQL for SQL-based analysis.
- Ran SQL exploratory analysis across revenue, customer segmentation, product performance, and subscription behavior, identifying that ~80% of customers fell into the loyal, repeat-purchase segment.
- Built an interactive Power BI dashboard with KPI cards and filters (gender, age group, category, shipping type) and delivered recommendations to grow subscription adoption from a 27% baseline.

Intelligent Health Monitoring: Heart Attack Prediction System | AWS S3, EMR, SageMaker, Lambda, SNS, Athena

Oct 2025 – Nov 2025

- Built an end-to-end predictive healthcare pipeline on AWS (S3, EMR/Spark, SageMaker, Lambda, SNS, Athena) to automate data ingestion, ML prediction, and clinical alerting.
- Merged 7-day simulated wearable vitals with patient history using PySpark, producing a clean, ML-ready dataset with under 0.5% missing values across 10,000+ records.
- Developed and deployed an XGBoost model in SageMaker for real-time heart-attack risk scoring, integrating Lambda to automate scoring and alerting workflows.

EDUCATION

Master of Science, Information Technology and Project Management | Arizona State University, Tempe, AZ

Aug 2024 – May 2026

GPA: 3.6/4.0

Bachelor of Technology, Computer Science | Sri Vasavi Engineering College, Tadepalligudem, India

Aug 2020 – May 2024

GPA: 7.9/10

LICENSES & CERTIFICATIONS

- AWS Academy Graduate – Machine Learning Foundations** | Amazon Web Services | Nov 2025
- AWS Educate – Introduction to Generative AI** | Amazon Web Services | Sep 2025
