

AKANKSHA GERIGA

Tallahassee, FL | (448)867-8349 | akankshageriga25@gmail.com | [Portfolio](#) | [Linkedin](#)

EDUCATION

Florida State University, Tallahassee, Florida
Masters in Data Science

May 2025
GPA: 3.87

TECHNICAL SKILLS

Languages & Big Data : Python, C, C++, HTML, CSS, Javascript, Java, Apex, R, Ruby, Hadoop, Apache Spark, Kafka
Databases & Data Preprocessing: Oracle, MySQL, Feature Engineering, Missing Data Handling, PostgreSQL
Machine Learning & Deep Learning : Linear/Logistic Regression, Decision Trees, SVM, K-Means, PCA, CNNs, RNNs, LSTMs, LightGBM
Tools : AWS (S3, Redshift, Athena, Lake Formation, Glue, Lambda, EventBridge, DataZone Terraform, Docker)
Statistical Analysis : Hypothesis Testing, A/B Testing, Probability, Linear/Logistic Regression, Regression analysis
Data Analytics : PowerBI, Tableau, Matplotlib, Seaborn, Retool

PROFESSIONAL EXPERIENCE

Live150.ai, New Jersey, USA, Artificial Intelligence Intern

10th July 2025-Present

- Collaborated with Architects, Designers, and Engineers to design, develop, and enhance AI-driven features in the Live150 health app.
- Developed and implemented AI Voice/Vision modules and digital twin systems; built, trained, and deployed machine learning algorithms, conducted code reviews, fixed bugs, and supported deployments.
- Engineered secure, automated pipelines for Dexcom and Libre CGM integration including OAuth2 authentication, real-time ingestion, data normalization, PostgreSQL storage, and hourly min/max aggregation, leveraging Google Cloud Scheduler for automated and scalable data processing.
- Designed and developed interactive data analysis dashboards in Retool, leveraging JavaScript queries, custom API integrations, and dynamic visualizations (Plotly, charts, stat widgets) to monitor app performance, user engagement, feature adoption, conversion metrics, and user feedback in real time; integrated Retool AI LLM for feedback classification
- Built and automated a cross-platform social media analytics pipeline by fetching organic and ads performance data from LinkedIn, Instagram, YouTube, and Reddit APIs; engineered ETL workflows to normalize and store structured data in PostgreSQL; implemented a daily scheduler to fetch and refresh metrics; and developed interactive Retool dashboards (charts, KPIs, filters) to provide the marketing team with actionable insights on platform ROI, engagement, and campaign performance.

Cognizant, Bangalore, India, Programmer Analyst – Salesforce

28th July 2021-18th July 2023

- Developed and customized Salesforce CRM solutions for Cummins using Apex, triggers, REST API, SOQL, Flows, and Process Builder. Integrated machine learning models into Salesforce for predictive insights. Gained hands-on experience with cloud data warehousing by collaborating on Snowflake data pipelines, integrating Snowflake datasets with Salesforce for unified reporting, managing complex data migration using Salesforce Data Loader, and building dynamic Power BI and Tableau dashboards for real-time sales and operational insights.
- Streamlined Salesforce operations by implementing Flows, validation rules, and LWCs, reducing manual efforts by **50%** and improving data accuracy by **35%**. Built AI-driven automation tools using OpenAI APIs, enhanced sales forecasting accuracy by **25%**.
- Led QA and UAT efforts, defined test strategies, and conducted regression testing, reducing post-deployment issues by **40%**. Managed Agile sprints using Atlassian Jira. Implemented a data ingestion pipeline from Salesforce to AWS S3 using Platform Events, Amazon EventBridge, enabling near real-time data flow into a centralized data lake. Triggered AWS Lambda functions via EventBridge to transform and store lead and case data into S3 in JSON format for downstream processing and analytics in Athena and Redshift.

Verzeo, Bangalore, India, Web Development Intern

1st April 2020-31st May 2020

- Developed an online hotel management system using **HTML, CSS, JavaScript, Python, and SQL** to manage bookings, payments, and room availability. Enhanced usability for both customers and administrators, streamlining hotel operations.

PROJECTS

Title: Automated Penalty Collection for traffic signal violation using Deep Learning Algorithm

- Implemented an automated traffic violation detection and penalty system using TensorFlow and MobileNet SSD for real-time vehicle detection, coupled with Ultimate ALPR SDK for efficient license plate recognition. Integrated the system with a database for automatic retrieval of violator details, fine deduction, and email notifications, achieving 90% accuracy in vehicle detection.

Title: Transaction Fraud Detection Using Machine Learning

- Developed a fraud detection system to classify financial transactions using XGBoost, Logistic Regression, Random Forest, KNN, and SVM, with SMOTE for class balancing and Boruta for feature selection. XGBoost achieved an accuracy of 91.2%, precision of 95.7%, and recall of 82.3% after hyperparameter tuning. The model was evaluated using precision, recall, F1-score, and Kappa.

Title: Medical Chatbot

- Developed a medical chatbot using OpenAI, Pinecone, LangChain, AWS, Flask, and Generative AI with RAG and Hugging Face, deployed as a Python-based web application to deliver accurate medical responses.

Title: Azure End to end Data Engineer project

Skills: Azure Data Lake Gen2, ADF, ETL Pipelines, Azure Databricks, Apache Spark, PySpark, Azure Synapse Analytics, Power BI

- Ingested data into Azure Data Lake Gen2, implemented ETL pipelines with Azure Data Factory, and transformed data using Azure Databricks with Apache Spark and PySpark. The data was analyzed in Azure Synapse Analytics, where external tables were created, and then integrated with Power BI to create a dynamic dashboard for real-time business insights.
