Personal Summary

Passionate Software Developer with 6+ years of experience in web application design and development, complemented by a master's in Information systems. Experienced in building microservices architecture and implementing DevOps practices, delivering enterprise-scale applications with focus on performance optimization and scalability.

Technical Skills

- Programming Languages: Java, JavaScript (ES6+ with modern frameworks), Python, Node.js, React.js, HTML, CSS, GraphQL
- Frameworks: Spring Boot, Spring Batch, Microservices
- Build Tools: Maven, Gradle, Jenkins
- Databases: Oracle, MySQL, SQL, NoSQL, MongoDB, Graph
- Developer Tools: Visual Studio Code, Postman, IntelliJ, Apollo Studio
- Version Control: Bitbucket, GitHub
- Cloud & DevOps: AWS AppSync, Google Cloud Platform (GCP), Docker, Kubernetes, Jenkins, Cloud Com, Cloud Computing, Cloud Migration.
- Testing Tools: JUnit, Mockito, SonarQube, Checkmarx, FOSSA
- Other Tools: Control-M, Bootstrap, Prometheus, Grafana.

Experience

Ford Motor Company

June 2023 to Current

Software Engineer New Jersey

Implemented and optimized GraphQL schema for Ford Credit application using Apollo Studio and AWS AppSync, reducing API response time by 40% and server load by 35% by eliminating over-fetching and implementing query batching.

Developed and deployed high-performance microservices using Java 17 and Spring Boot, supporting 50K daily transactions while implementing fault tolerance patterns and circuit breakers for enhanced reliability.

Integrated AWS AppSync to facilitate GraphQL-based real-time data synchronization between distributed applications, improving API efficiency and reducing data transfer costs.

Enhanced JavaScript-based frontend applications with optimized asynchronous calls to GraphQL APIs, improving rendering speed and user interactions.

Architected and automated CI/CD pipelines with Jenkins and Docker on Google Cloud Platform (GCP), reducing deployment time and implementing automated rollback mechanisms.

Integrated comprehensive code quality tools including SonarQube, Checkmarx, and FOSSA, achieving code coverage of 90% and resolving 40 security vulnerabilities through systematic code review and remediation.

Designed and implemented reactive programming solutions using Project Reactor and Web Flux, handling 100+ concurrent user sessions with improved memory utilization and response times.

Enhanced API documentation and integration process using Swagger and Open API specifications, reducing integration time by 30% and improving cross-team collaboration efficiency.

Established comprehensive monitoring systems using Prometheus and Grafana dashboards, decreasing incident response time to under 5 minutes through custom alerting rules and automated incident reporting.

Udaan.com

June 2018 to August 2021

Java Developer Bangalore, India

Company Overview: <https://Udaan.com>

Architected and implemented 10+ REST APIs using Java, Dropwizard and Microservices architecture for an e-commerce platform.

Reduced request processing time by 25% through optimized request handling and caching strategies with Redis.

Led development of an Internal Finance portal using React.js and Redux, enabling concurrent downloads of 1GB+ financial reports from Azure Data Lake with open socket connections.

Designed and orchestrated 2 microservices for invoice generation and tax computation, handling 5k+ RPS for real-time tax calculation at the time of checkout.

Optimized database performance through SQL query tuning and NoSQL implementation, reducing average response time by 20% while maintaining data consistency.

Implemented GraphQL API endpoints to streamline data fetching, reducing client-side complexity and improving query efficiency.

Integrated AWS AppSync to provide secure and scalable GraphQL APIs, enhancing the e-commerce platform's real-time data access.
