PROJECT EXPERIENCE

Project #1:

Role: Pega PRPC Senior Developer

Date: Oct 2022 - Present

Client: Elevance Health, Jersey City, NJ

Project Description:

InterAct is a work/demand management system focused on the cradle to grave tracking of claims-related issues for the GBD line of business. InterAct will take in all GBD claims/Configuration related system issues and business change. Issues and changes requiring work from pricing, Benefits, IT and Claims operations will be routed to those teams with in the tool. If claims configuration work is required by other functional teams, process will be tracked using InterAct, but work may be requested and completed using the other tool. Interact has replaced the following (GBD E2E Claim solution tool, Medicaid CRRT tracker, Medicare CERT tracker, Medicaid Business rules share point tracker, Medicare Operations oversight salesforce tracker and ASPEN GBD business only)

Roles & Responsibilities:

- Interact with Product owners to discuss project status and requirement clarifications.
- Worked on redesigning multiple deprecated screens and gained valuable hands-on experience on Pega UI design, while simultaneously working on improving functionality.
- Received multiple appreciations from Senior management team for work done on developing modules in critical time.
- Worked on Dev Studio, App Studio and Admin studios.
- Performed Root Cause Analysis of the Production issues and identify a solution.
- Involved in preparing technical design documents for the requirements.
- Supported the day-to-day activities and worked on resolving the defect fixes whenever needed.
- Involved in Code Reviews for the technical changes made for each requirement given by the business team.
- Involved in raising support request to Pega for the complex/minor Pega product related issues.
- Involved in Production level Deployments for the requirements developed.

- Involved in Upgrading the Pega Version by skimming the Ruleset versions and maintaining the equal number of rules in each environment.
- Implemented difficult stories which involved Go button visibility for the users by updating the when rules and adding the configuration to Data Table.
- Performed Code migration to higher environments using Bit Bucket and Bamboo.
- Involved in On-call rotation.
- Involved in Code refactoring.

Environment: Pega PRPC 8.6, Pega PRPC 8.4.6.

Project #2:

Role: Pega Developer

Date: Jan 2019-May 2022

Client: Group Health Benefit Solutions

Project Description:

It is an Insurance Project. It is built on Top of Pega Group Benefits Insurance Framework. The purpose of the project is to display the products and respective coverages, based on the selected products and coverages Quotes should be displayed to the end user. The end user will select a product, Sub case will be created under the products. Quotes will be processed in the Products. Products consist of Coverages, whereas coverages may also have sub coverages. The Quotes can be proposed or rejected by Producer or Consumer.

Roles & Responsibilities:

- Interaction with client to discuss project status and requirement clarifications.
- Worked on Dev Studio, App Studio and Admin studios.
- Implemented Java functions in Pega to address the complex requirements to fetch the PDF files from Parent and child cases and attached them to Parent case.
- Performed Root Cause Analysis of the live issues and identify a solution.
- Involved in preparing technical design documents for the requirements.
- Guided team members related to technical level and process level.
- Involved Testing & Bug Fixing (QA Support)
- Involved in development of change requests raised from customer side.
- Involved in raising support request to Pega for Pega Product related issues after upgrade.
- Involved in Production level Deployments.
- Involved in Upgrading the Pega Version from 7.2.2 to 8.4.1 by skimming the Ruleset versions and maintain the equal rule count in all the environments.

Environment: Pega PRPC 7.2.2, Pega 8.4.1, HTML, CSS, Java

Project #3:

Role: Pega Developer

Date: Apr 2018-Dec 2018

Client: Rue La La

Project Description:

It is an E-Commerce Project. The main purpose of the project is to display the list of items to the end user. Items selected by the end user, move to the sub case among which he can filter the

items and add to the cart aligned parallel to the Wishlist. The Client gets the products from vendor and sell them from their side by showing the list of Products in a grid. The user uploads an excel sheet, we are parsing the excel sheet and display it on the grid. The user will select the necessary items from that and proceed forward. Child case will be created, and all the delivery details will be updated accordingly once the order is made.

Roles & Responsibilities:

- Interaction with client to discuss project status and requirement clarifications.
- Implemented complex UI requirements such as nested grids.
- Performed Root Cause Analysis of the live issues and to identify a solution.
- Played as good team member and coordinated with the team to achieve on time delivery
- Involved in preparing technical design documents.
- Involved Testing & Bug Fixing (QA Support)
- Involved in development of change requests raised from customer side
- Involved in raising support request to Pega.
- Involved in Production level deployments.

Environment: Pega PRPC 7.3.1, PostgreSQL, HTML, CSS, JavaScript

Project #4:

Role: Pega Developer

Date: June 2017-Mar 2018

Client: Welltok

Project Description:

It is built on Base Pega. This is part of Welltok Business Rules Engine. Welltok assigns the fitness program/activity to employees of the organization and will reward the participant if the participant completes the task on time. On completion of the task, Orders module comes into picture where we have exposed our Pega Rest services and embedded this application in Client's portal using web mashup. When user got their reward then from client's portal, they will hit our Pega API to create an order which will have all necessary details.

Roles and Responsibilities:

- Interaction with client to discuss project status and requirement clarifications.
- Performed Root Cause Analysis to identify a solution.
- Played as good team member and coordinated with the team to achieve on time delivery
- Design as per the requirements and get approval from the client
- Perform the positive as well as the negative testing
- Fix the errors as per the defect log
- Deploy the Application patch version on UAT

Environment: Pega PRPC 7.2.2
