

SUMMARY:

Software Engineer with 4+ years of experience in developing scalable applications using Java, Python and AWS. Skilled in microservices architecture, API development, and modern DevOps practices. Proficient in both SQL and NoSQL databases, with a strong focus on performance, reliability, and end-to-end system design.

PROFESSIONAL EXPERIENCE:**Software Engineer | VISA | USA | AUG 2024-Present**

- Designed and implemented ETL pipelines in Java 8 and Python for payment and transactional data preprocessing, improving workflow efficiency and enabling downstream ML analytics.
- Developed and deployed machine learning models to detect anomalies in application and transaction logs, generating real-time actionable alerts for operational teams.
- Built end-to-end alert management and automation tools using Node.js, Python, and Java, integrating with Microsoft Teams to streamline operational processes.
- Maintained big data solutions using Hadoop, Spark, Hive, and Python to analyze 100B+ transaction records, producing insights that improved payment fraud detection and budget forecasting.
- Built robust payment gateway APIs using Spring Security, OAuth2, and RESTful services to integrate with merchant platforms and banking systems, enabling seamless card authorization and settlement processes for financial institutions.
- Mentored engineers on REST API development, Python/Java coding best practices, and database optimization, contributing to improved code quality and reduced technical debt across analytics teams

Software Engineer – LTIMINDTREE | Hyderabad, India | JUL 2022– DEC 2023

- Engineered and deployed data integration microservices using Spring Boot, REST APIs, and PostgreSQL, enabling real-time ingestion of 1M+ records per month.
- Managed ETL processes, converting data formats as needed, and integrating over 1 million records into target systems like Snowflake using SQL.
- Optimized database performance by redesigning complex SQL queries and implementing database indexing strategies, resulting in 40% improvement in data retrieval speeds for critical business operations.
- Designed integration workflows using Boomi, integrating multiple ERP systems with Snowflake and internal APIs using SFTP, JDBC, and SOAP adapters.
- Built scalable microservices architecture using Java, Spring Cloud, and PostgreSQL, serving over 10,000 concurrent users while maintaining sub-200ms API response times through efficient caching strategies with Redis.
- Collaborated with clients to understand requirements, develop tailored solutions, and ensure successful deployment and operation of integration processes.
- Conducted thorough testing in test environments, transitioning processes to UAT and Preprod, and supporting the transition to production.

Associate Software Engineer – AIRFI | Hyderabad, India | Dec 2020 – Jun 2022

- Developed wireless network management applications using React.js and Node.js, creating intuitive dashboards for monitoring Wi-Fi infrastructure across airports and public venues, improving network reliability by 35%.
- Implemented real-time network monitoring solutions using WebSocket connections and Chart.js, providing live analytics on network performance, user traffic, and system health to operations teams.
- Built containerized backend services using Docker and AWS ECS, enabling high-availability APIs with automated service scaling.
- Designed and implemented internal monitoring dashboards using React.js and D3.js, visualizing key performance indicators, system logs, and error rates in real time for engineering stakeholders.
- Developed and maintained AWS Lambda functions integrated with CloudWatch to automate backup processes, alert generation, and task scheduling, improving observability and reducing downtime incidents.
- Automated CI/CD workflows using AWS Code Pipeline, Code Build, and GitHub, reducing deployment cycle time by 60% and ensuring consistent production delivery.
- Authored robust Bash scripts and cron jobs for log rotation, system cleanup, and database snapshot management in Linux-based infrastructure, improving operational stability and disaster recovery compliance.

SKILLS:

- Programming Languages:** Java (8–17), Python, JavaScript (ES6+), TypeScript, SQL, Bash/Shell, C++
- Web & Frameworks:** Spring Boot, Spring MVC, Node.js, Express.js, React.js, Angular, Django, Flask
- Cloud & DevOps:** AWS (EC2, S3, Lambda, ECS, CloudFormation), GCP (Compute, Big Query), Azure (App Service, Functions), Docker, Kubernetes, Terraform, CI/CD (Jenkins, GitHub Actions), Boomi
- Microservices & APIs:** RESTful APIs, GraphQL, gRPC, API Gateway, Swagger/OpenAPI, Microservices Architecture
- Databases:** PostgreSQL, MySQL, MongoDB, Redis, DynamoDB; schema design, query optimization, performance tuning
- Testing & Monitoring:** JUnit, Mockito, PyTest, Selenium, Postman; CloudWatch, Prometheus, Grafana, ELK Stack
- ML&AI:** Machine learning (Predictive Models, Supervised learning, Feature selection, Model Selection/training, Performance/evaluation metrics), AI (LLM's, Agentic AI)
- Others:** System design, OOP, SOLID principles, Design patterns, Linux/Unix, API integration, OAuth2/JWT, Agile/Scrum, Pandas, NumPy, Data Visualization (PowerBI, matplotlib), web scraping, CI/CD, RESTAPI, HTML, CSS, Technical Documentation, Code Reviews

CERTIFICATIONS:

- AWS developer associate
- Boomi: Professional API management, Professional API design

EDUCATION:

Southeast Missouri State University
Masters, Applied Computer Science

JAN 2024-MAY 2025
CGPA: 4.0

RESEARCH PAPER

- Published Research Paper:** in ACMSE and SRC on Password evaluation tool and data security, improving weak password detection by 40%. Integrated intelligent feedback and strong password suggestions into the tool, reducing user vulnerability to brute-force attacks by 35% and promoting better password hygiene.
