## SUMMARY

Accomplished software developer with a strong background in aerospace and banking industries. Experienced in developing critical systems for aircraft and core banking applications. Skilled in software testing, code review, and unit testing. Recently relocated to the US with a valid work visa and seeking immediate employment as a software developer.

## EDUCATION

**Bachelor of Engineering in Computer Science**  
Anna University, Chennai, India

July 2017 to August 2021  
8.4 /10.0

## PROFESSIONAL EXPERIENCE

**Hindustan Aeronautics Limited, Bangalore, India: Software Developer**

May 2023 – August 2023

- Spearheaded the development of critical gauges and targeting systems for attack aircraft, utilizing SCADE Display and SCADE Suite
- Collaborated with a multidisciplinary team to design and engineer displays, developing multiple display modes to accommodate various operational scenarios, thereby enhancing the aircraft's mission capabilities and pilot's situational awareness
- Designed and implemented priority and emergency warning displays within Smart Multi-Function Displays (SMDs) for aircraft, enhancing safety and responsiveness during high-stress situations
- Utilized a robust message structure and out structure within SCADE Suite to facilitate the generation and communication of fault and warning data across the aircraft's systems.
- Responsible for functionality testing on flight simulators to validate the performance and reliability of developed software systems and displays

**Zafin Labs, Chennai, India: Consultant**

March 2022 – February 2023

- Held primary responsibility for configuring, integrating, and maintaining all PostgreSQL databases across various environments, including development, testing, staging, and production ensuring robustness and reliability of database systems
- Implemented effective data backup and recovery strategies, minimizing the risk of data loss and downtime
- Designed and managed pricing, products and packages for simplifying core banking systems like Product Catalogs, Rates & Fees, Offers & Rewards and Billings in Z-Platform using Z-Scripts(Internal Java based programming language)
- Collaborated with stakeholders to understand their requirements, ensuring that changes were accurately implemented and met client expectations
- Played a pivotal role in ensuring code quality by conducting thorough code reviews and implementing comprehensive unit tests

|                                               |                                                   |
|-----------------------------------------------|---------------------------------------------------|
| <b>Programming Languages/Web Technologies</b> | : Python, C/C++, Java, Html and JavaScript        |
| <b>Programming Interface</b>                  | : Open GL                                         |
| <b>Database</b>                               | : PostgreSQL, SQL                                 |
| <b>Servers</b>                                | : WildFly                                         |
| <b>Tools</b>                                  | : SCADE Display, SCADE Suite, Eclipse and SOAP UI |

## WORK EXPERIENCE

**Tecnolynx, Hyderabad, India: Intern, Testing**

January 2022 – March 2022

- Collaborated closely with the development team to create comprehensive test plans which enabled the development of targeted test plans aimed at ensuring the quality and reliability of applications
- Assumed a key role in a specific testing phase, which involved executing the test plans in a systematic and organized manner to enabling the development team to understand and address any identified bugs or deficiencies effectively
