Work Experience

Project Engineer II

Axiom Space: Houston, TX

March 2022 – Present

- Lead Project Engineer for the Crew Health Support Systems on Axiom's commercial space station
 - Product owner for the entire lifecycle of all Medical, Exercise, and Environmental Monitoring Equipment
 - Work closely with interdisciplinary teams, such as Design Engineers, System Engineers, and Medical Operations teams to meet program milestones
 - Create requirements and verification closure records (VCRs) for all Crew Health Equipment
 - Develop controlled technical document processes and procedures following standards set forth by both Axiom and NASA, as our client
 - Adhere to government standards as well as EAR and ITAR regulations
 - Manage budget allotted to all Crew Health products
 - Manage all projects using JIRA, Microsoft Project, and Confluence using a combination of the Agile and Waterfall methodologies
- Successfully guided an intern during the intern program through three separate projects with collaboration and problem-solving

Project Engineer I

Jacobs Engineering: Houston, TX

May 2020 – March 2022

- Product owner for 4 components in the Portable Life Support System (PLSS) for the xEMU project at NASA JSC
 - Successfully completed procurement, assembly, and testing of each of my components for the Design Verification Testing stage
 - Closely collaborated with the design team throughout the development process to update the component design when necessary (i.e., challenging assembly or failed test results)
- Prepared controlled government documents in reference to each stage of development for my components as well as assist with several other components belonging to my inner team
- Worked in a controlled lab setting with technicians using the prepared Task Performance Sheets and Procedures with quality assurance personnel present for validation of work done
- Certified on test rig in the lab for acceptance testing per the end item specification for each of my components

Consultant - Medical Equipment Coordinator II

CannonDesign: Houston, TX

November 2018 – May 2020

- Closely collaborated with both the clients and interdisciplinary design teams through schematic design, design development, and construction administration phases for multiple projects
 - Teams included: Architects, Engineers, and Interior Designers
- Completed databases for projects in accordance to each client's individual needs
- Worked in each project's Autodesk Revit model to ensure medical equipment was placed properly for MEP (Mechanical, Electrical, Plumbing) specifications
 - Took initiative with quality assurance of database versus project model
- Began leading equipment-oriented client meetings within 6 months of starting
- Ensured each project was on time and in budget per client's and design team's standards
- Took the lead on smaller projects
 - Example project – Cancer Center building that consisted of 3 floors with 6 departments

Education

Bachelor of Science in Biomedical Engineering

May 2018

Mississippi State University, Starkville, MS

ABET accredited

Skills

Experience utilizing the following tools:

- Microsoft Office Suite - Project, PowerPoint, Excel, Word, Outlook, and Teams
- Atlassian Tools - JIRA and Confluence
- Cloud Management – BOX
- Requirements Management – JAMA
