Enterprise Data Governance and Management Professional Data Quality Management, Data Stewardship, Metadata Management

Senior Data Governance & Management (DG&M) professional seeking a defining career path opportunity in a high paced growing organization.

PROFESSIONAL PROFILE

Strong Data Governance and Management skills across diverse U.S markets. Key industries are US financial, Retail and automotive segment. Focus domains are Customer, Product, Finance, Vehicle, Location and Inventory.

- 7+ **plus years of experience** in supporting and contributing to the implementation of diverse federated/centralized Data Governance principles & framework, from ground up.
- Supported the data quality management initiative by collaborating with Technology partners during **DQ rules development** and **data quality issue resolution process on critical data sets**.
- Provide active contribution to the leadership on the design of **Data Strategies, vision and roadmap**. This is pivoted on the principles of people (Data Stewards, roles and responsibilities), process (rules and controls) and technology (DG, DQ, MDM and metadata solutions).
- Moderated efforts in defining **critical data elements (CDEs)** identification criteria and identified CDEs in the **Customer, Retail, finance and Vehicle** domains.
- Design and implement **business glossaries** and **data catalogs** in the centralized solution across location, product, customer, inventory and sales.
- Formulate business insights through deep data analysis by leveraging **SQL queries** and generate **business reports**.
- Extensive experience in leading initiatives on developing DM Business Intelligence solution (**score cards and metrics reports**).
- Strong verbal and written communication skills.

TECHNICAL SKILLS

- Proficient with **Microsoft Office** (including **Microsoft Excel, Word & PowerPoint**),
- Informatica — **Data Governance and Catalogue**
- Power BI
- Azure DataBricks-**Data Quality Reporting**
- SODA(Operating System)- **Service-Oriented Data Application**
- Atlassian Jira Board
- RELTIO (MDM Hub)

PROFESSIONAL EXPERIENCE

Sr.Data Governance Analyst (Data & Insight): Abercrombie & Fitch Corp. March'24 -Present

Providing robust data governance advisory to the Chief Data Office towards the ongoing maturity of the enterprise data program. Following are the work responsibilities during my engagement to the stakeholders.

- Design the **business glossary/data catalog** across multiple domains (location, sales, customer, product). Enrich metadata on the identified attributes/data elements in **Informatica Metadata Manager** through standardization with the Data Owners and Data Stewards
- Develop the process flow to standardize and load business terms in the metadata solution through Data Owners approval process.
- Lead the design, socialization, formalization of the **DQ Issue management process** on the Sales domain. This includes partnering with the DEOs (Data Entity Owners), Product Owners, Technology Stewards and Data Consumers to design DQ rules on global stores periodic sales critical data elements.
- Define the **DQ Rules validation process** through active partnership with the stakeholders. Address data anomalies and exceptions to mature critical data elements performance,
- Implement **Domain data dictionaries (Sales, Location and Inventory)** in Core-Merchandizing business division. This includes finalizing glossary/dictionary components, obtaining approvals from the critical data business owners and loading it in the repository.
- Reduced manual intervention to mature Oper. efficiency by **automating DQ exception and anomalies correction process**

- Manage DQ Mgmt. Framework through DQ centralized solution- **SODA** (Simple Object Database Access)
- Pulled the required DQ reports from DataBricks for ongoing monitoring and reporting
- Performed **Dataset Comparisons** from multiple sources to consolidate in one common result in MS Excel
- Fetching and curate reports from multiple platforms like **Snowflake** and **PowerBI** to validate and confirm the **accuracy and reasonability** of the **critical Datasets**

Data Steward (Contractor) | Customer Data: Business Concept LLC August'21 - March'24

Served as a contractor to a client that is a leader and a publicly traded company in a retail automobile industry (digital and in store).

- Contributed to the program DG lead in the development and the formalization of Customer **Data Quality Program**
- Under the leadership of senior DG Director, construct DQ Rules and execute SQL queries on the critical data sets. Obtain results to measure performance trending and business value.
- Collaborated with stakeholders to standardize match and merge rules in **RELTIO** on customer and Product **master data**. Create golden records and performed analysis to monitor the behavior of exact and fuzzy rules outcome.
- Played a key contributing role in the Design and implementation of the end to end **DQ Mgmt. Framework and best practices**. Achieved **90% data remediation on critical data elements** at critical source systems
- **Support** the development and adoption of **Data Accountability Framework (DAF)** – Define and mature roles - **Data Owners, Data Stewards, System Owners, Data Consumers**
- Utilize **MS Excel** in managing periodic **Financial Data Analysis, DQ monitoring and performance** on **CDEs**.
- Utilized **Key Performance Indicators (KPIs)** to showcase the DQ management program maturity to the leadership

Data Steward (Contractor) | Product Data: Freddie Mac March'18-April'21

Freddie Mac serves US mortgage market to provide liquidity, affordability and salability through balanced financial primary market lending. While serving as a Data Steward, following are my key responsibilities

- Contribute in institutionalizing the business glossaries on HR, **Finance domain**.
- Contribute in requirement gathering of **DQ Dashboard** development initiatives on defining **score cards, thresholds and exceptions** in alignment with expected **business benefits/outcome**
- Driving standardized and harmonized enterprise wide initiatives on formalizing key DQ efforts like identification of **Critical Data Elements, data profiling methodology, DQ rules development, data validation, data gaps remediation, scoring, metrics, reporting and ongoing monitoring**

EDUCATION

- Certified Scrum Master (CSM)
- Certified Scrum Developer
- Bachelors of Commerce & Economics | University of Karachi
