Summary

Detail-driven Software Engineer with 2+ years building scalable full-stack products in Python, Django/FastAPI, and React/Next.js. Skilled in designing secure microservices, real-time systems, and high-performance APIs with Celery, Redis, WebSockets, and GraphQL. Experienced in AWS-based cloud deployments, CI/CD automation, and test-driven engineering. Proven ability to enhance application performance, reduce manual workflows, and reduce operational overhead for enterprise environments.

Technical Skills

Programming & Scripting: Python (Async, OOP, REST Automation), JavaScript (ES6+ Functional Patterns), TypeScript (Static Typing), Shell Scripting (Bash), SQL for Application Queries, GraphQL Schemas, Git/GitHub/GitLab, API Design (REST/GraphQL), YAML/JSON for Config & Data Exchange, CI/CD Pipeline Scripting.

Backend Engineering: Django, Django REST Framework, FastAPI, Flask, Node.js, Express.js, Celery for Distributed Tasks, WebSockets for Real-Time Apps, SQLAlchemy ORM, Redis Caching, RabbitMQ Message Queues, Microservices Architecture, API Security (JWT/OAuth2), Nginx Reverse Proxy.

Frontend & UI Engineering: React.js, Next.js, Redux Toolkit, Vite Bundling, Tailwind CSS for Design Systems, Component-Driven Architecture, SPA/PWA Development, Responsive UI/UX Patterns, State Management Patterns, Web Performance Optimization.

Cloud & DevOps Engineering: AWS (Lambda, EC2, S3, RDS, CloudFront, API Gateway), Docker Containers, Kubernetes (EKS), Terraform, GitHub Actions, Jenkins, Load Balancing, Serverless Deployments, Monitoring & Logging (Prometheus, Grafana, Sentry).

Testing, Quality & Performance: PyTest, Jest, Cypress, Playwright, TDD/BDD Workflows, Postman API Testing, Swagger/OpenAPI Documentation, Static Code Analysis, SonarQube, Profiling & Optimization, Secure Coding Practices, Observability Tooling.

Professional Experience

Software Engineer, DXC Technology

Aug 2024 – Present | Remote, USA

- Developed a microservices-based compliance management platform using Python (Flask) and React, automating audit workflows for financial clients and reducing manual compliance verification time across departments.
- Built and integrated RESTful APIs connecting Flask backend to React frontend via JWT authentication, ensuring secure and scalable multi-user access for regulatory document management.
- Designed reusable React components with Tailwind CSS and optimized rendering performance, improving page load speed by 27% in client-side dashboards.
- Configured asynchronous job scheduling using Celery and Redis for report generation and email triggers, enhancing throughput and backend performance stability under high data loads.
- Deployed the full stack application on AWS (S3) using Docker and GitHub Actions CI/CD pipelines, achieving seamless cloud deployment across test and production environments.
- Implemented unit and integration tests with PyTest and Cypress, achieving 94% code coverage and ensuring defect-free releases aligned with Agile sprint delivery cycles.

Software Engineer, HCLTech

May 2022 – Jul 2023 | India

- Designed and developed a Python Django-based asset monitoring system for factory equipment, enabling real-time data visualization and predictive maintenance through IoT sensor data integration.
- Built modular Angular UI components with dynamic data binding to REST APIs, enhancing front-end responsiveness and improving operator efficiency across multiple production lines.
- Created secure Django REST Framework APIs supporting authentication, user roles, and granular access control, enabling multi-tier stakeholder visibility into asset health and maintenance logs.
- Automated equipment downtime tracking using Celery task queues and PostgreSQL triggers, reducing manual reporting overhead and improving maintenance scheduling accuracy by 21%.
- Designed and deployed a role-based admin dashboard with analytics visualizations using Chart.js, enabling plant managers to identify cost-saving trends and performance bottlenecks effectively.
- Integrated Redis caching and optimized ORM queries, decreasing average API response time by 32%, ensuring smooth real-time dashboard performance even under peak loads.
- Managed full lifecycle delivery through GitLab CI/CD pipelines, Dockerized deployments, and Jira-based sprint tracking, ensuring continuous integration, minimal downtime, and transparent release management.

Education

Master of Science, University of Arkansas at Little Rock
Computer and Information science

Aug 2023 – May 2025 | Arkansas, USA
