PROFESSIONAL SUMMARY

- High-Caliber Full-Stack Java Development Professional with over 3+ years of experience in designing, developing, and deploying scalable enterprise applications.
- Proficient in Java programming across multiple versions, with in-depth knowledge of object-oriented principles, memory management, multithreading, and concurrency to build high-performing enterprise applications.
- Adept at designing and deploying microservices-based applications that offer scalability, flexibility, and maintainability, ensuring loosely coupled modules that support independent development and deployment.
- Skilled in writing thread-safe code to perform parallel processing, reduce latency, and improve application throughput in resource-intensive environments.
- Knowledgeable about Agile practices and full software development lifecycle, contributing to faster delivery cycles, continuous integration, and adaptive planning.

WORK EXPERIENCE

Java Developer

Sep 2024 - Present

Ezynest LLC

Dallas, TX

- Designed and developed scalable enterprise-grade applications using Spring MVC framework, promoting loose coupling, high cohesion, and reducing maintenance effort by 30% across modules.
- Optimized SQL queries and indexing strategies in MS SQL Server, automated CI/CD pipelines using Ant scripting, and applied unit testing frameworks (JUnit) for robust test coverage.
- Built and integrated SOAP-based web services for cross-platform interoperability between legacy and modern systems, elevating operational throughput by over 20% and reducing manual dependencies.
- Created dynamic, AJAX-driven UIs using HTML5, CSS3, and asynchronous calls, aligned with accessibility and UX best practices to enhance internal tool adoption.

Ghrian Technologies

Hyderabad, India

Growth Path:

Java Developer

Aug 2021 - Dec 2022

Java Developer Intern

Jul 2020 – Jun 2021

- Developed back-end components using Java Servlets and JSPs under MVC architecture, reducing code redundancy by 35% and improving modular development across teams.
- Boosted system performance using Java concurrency API, including thread pooling and synchronization mechanisms, to facilitate thread-safe execution in high-load environments.
- Designed cross-browser compatible UIs with HTML, CSS, AJAX, and implemented JavaScript-based client-side validations, adhering to W3C standards for seamless UX.
- Integrated JDBC with MySQL, deployed on Apache Tomcat, and performed automated JUnit testing, catching 90%+ defects before UAT to streamline the release cycle.

PROJECTS

Library Management System

Jan 2023– May 2024

- Launched a scalable Library Management System using J2EE and the MVC pattern, automating book lending, return, and account processes, which reduced manual workload by over 75% and improved operational efficiency.
- Implemented backend systems to handle inventory, track issue and return transactions, and control user sessions for over 500 active users, resulting in more accurate data handling and improved system reliability.
- Devised a normalized database schema in Oracle RDBMS and wrote optimized SQL queries to support high-speed data retrieval and smooth interaction between book and user modules.
- Utilized Spring Framework's IoC features to modularize services and streamline dependency management, using Log4j for real-time monitoring and error logging to enhance system observability and debugging.

E-Commerce Platform Development

Jan 2020–March 2020

- Orchestrated the development of a full-stack e-commerce solution using JWT for authentication, delivering smooth product exploration, cart integration, and checkout processes.

- Designed RESTful backend services using Spring Boot microservices architecture to manage dynamic product catalogs, process real-time orders, and maintain stateless session control across modules.
- Employed Hibernate ORM for object-relational mapping, enabling consistent and reliable CRUD operations across more than five functional modules and improving database interaction stability.
- Integrated third-party APIs for payment processing and logistics, configured centralized logging with Log4j, and successfully reduced checkout abandonment rates by 20%, enabling real-time order tracking.

EDUCATION

Master of Science (MSc) in Computer Information Science Southern Arkansas University, Magnolia	2023 –2024 Andhra Pradesh
Bachelor of Technology (B.Tech) in Electronics and Communication Engineering (ECE) Kallam Haranadhareddy Institute of Technology	2017 – 2021 Andhra Pradesh

SKILLS

Web API Integration, Agile/Scrum Methodologies, Data Modeling and Schema Design, Object-Oriented Programming (OOP), Microservices Architecture, Project Management, Testing Framework, Software Development Life Cycle (SDLC), Debugging and Troubleshooting, Leadership and Team Management

TECHNICAL SKILLS

Programming Languages: Java (17, 14, 11, 8, 7), JavaScript, TypeScript, SQL, HTML5, CSS3

Frameworks & Libraries: **Backend:** Spring Boot, Spring MVC, Spring Cloud, Spring WebFlux, Spring Batch, Spring Security, Spring Data JPA, Spring Integration, Hibernate, JPA; **Frontend:** React.js, Angular (2–12), AngularJS, jQuery, Bootstrap, Redux, NgRx, AJAX

Web Technologies & APIs: RESTful APIs (JSON), SOAP APIs (XML), GraphQL, Servlets, JSP

Databases: Relational: PostgreSQL, Oracle, MS SQL Server, MySQL; NoSQL: MongoDB, Cassandra; ORM: Hibernate, Spring Data JPA

Tools & Platforms: Eclipse IDE, SVN, Git, Apache Tomcat, Ant, JUnit, HttpClientModule

Operating Systems: Windows, macOS, Linux

Development Methodologies: Microservices Architecture, Service-Oriented Architecture (SOA), Monolithic Systems, MVC Design Pattern

Other Technologies: ASP.NET Core (from internship), ChartJS, D3.js, Google Maps API, Vega.js
