PROFESSIONAL SUMMARY

Aspiring analyst with a strong foundation in statistics, mathematics, and programming, currently deciding to pursue a master's degree in Statistics. Demonstrated skills in data wrangling, visualization, and end-to-end analytics workflows using Python, SQL, and Tableau. Experienced in handling complex datasets and machine learning tools. Eager to apply statistical analysis and predictive modeling to inform strategic decisions in dynamic environments.

Education

University at Buffalo, New York

Aug 2021 - May 2025

Bachelor of Arts, Statistics, Mathematics Minor, Public Health Minor **GPA: 3.4**

- **Achievements:** Dean's List 2025
- **Coursework:** Statistical Methods, Probability, Statistical Inference, Statistical Computing with SAS I & II, Statistic Quality Control, Regression Analysis, Design of Experiments, Calculus I-III, Linear Algebra, Differential Equations, Intro. to Public Health, Stress and Population Health, Epidemiology, Computer science I & II, Discrete Structures, Systems Programming

Project Experience

Scouting Metric Visualization for European Football | Tools: Python, SQL, Tableau

- Scraped and structured player data from FBref using BeautifulSoup and pandas, covering categories such as shooting, passing, possession, goalkeeping, and miscellaneous stats
- Built a multi-stage ETL pipeline to parse, clean, and export data for scalable access
- Designed and queried relational databases to support position-specific analytics and feature engineering
- Developed an interactive Tableau dashboard with radar charts, percentile metrics, and filters for dual-player comparisons by position
- Enabled dynamic scouting insights and performance tracking through intuitive visual storytelling and user-controlled exploration

Nashville Housing Data Analysis | Tools: SQL, Tableau

- Analyzed over 56,000 rows of unique housing data to uncover trends in property sales, ownership distribution, and neighborhood-level patterns
- Cleaned and transformed property datasets using PostgreSQL functions (COALESCE, SPLIT_PART, REPLACE)
- Applied CTEs and subqueries for efficient filtering and normalization
- Standardized categorical fields and binary indicators to improve data quality
- Built Tableau dashboards to visualize property trends, sales patterns, and ownership distribution
- Managed version control and collaboration using Git and GitHub

Technical Skills

Programming: Python, SQL (MySQL, PostgreSQL), SAS, R, MATLAB

Tools & Analysis: Tableau, Excel, Git, GitHub, Minitab, Data Visualization, Predictive Modeling

Databases: PostgreSQL Server

Libraries: BeautifulSoup, Matplotlib, NumPy, Pandas, Seaborn, Sklearn
