SUMMARY

- **Results-driven Business Analyst with 3+ years** of experience in healthcare & IT, specializing in process optimization, Agile methodologies, and data-driven decision-making and proven track record of streamlining operations.
- Skilled in Python, SQL, and data visualization tools (Matplotlib, Pandas, NumPy) to build predictive models, automate reporting workflows, and design executive dashboards.
- Adept at leading Agile Scrum frameworks, delivering a 20% reduction in project timelines by enhancing sprint planning and stakeholder collaboration.
- Managed end-to-end Scrum processes, ensuring on-time and within-scope delivery of sprints.
- Strong background in requirements gathering and documentation, including BRDs, Use Cases, and UML diagrams along with improving process documentation clarity via detailed technical specifications & stakeholder collaboration.
- Committed to driving business growth through actionable insights, having briefed senior leadership on user, consumer, and marketing insights that informed product improvements and strategic decisions.

SKILLS

Languages:	Python, R, SAS, MATLAB, SQL
Libraries:	Pandas, NumPy, Seaborn, Matplotlib
Databases:	MySQL, PostgreSQL, SQL Server, Oracle, MongoDB
Documentations:	BRD, FRD, SRS, JAD Sessions, User Stories, Use Cases, Business Case, Business Analysis Plan, Traceability Matrix
Analysis:	Risk Analysis, Cost & Benefit Analysis, SWOT Analysis, GAP Analysis, Financial Analysis, Exploratory Data Analysis (EDA)
Data Analysis:	Data Warehousing, Data Wrangling, Data Manipulation, Data Modeling, Data Visualization
Visualizations:	Tableau, Power BI, Looker, Advance Excel
Data Science:	Data Modeling, Data Visualization, Predictive Analytics, Ad Hoc Analysis, Data Modeling
Tools:	Jira, Confluence, Asana, Trello, Slack, Rally, MS Projects, SharePoint
Others:	Quality Assurance, Accounting, Budgeting, Statistics, Development
Methodologies:	SDLC, Agile, Scrum, Kanban, Waterfall

EXPERIENCE

RITHUM INC. – NY, USA

Business Intelligence Analyst

| Jun 2024 – Present

- Spearheaded the development of a business rules engine, streamlining key processes such as referrals, prior authorization, and claims processing, ensuring seamless operational efficiency.
- Led Agile Scrum framework adoption, resulting in a 20% reduction in delivery timelines by enhancing sprint planning, user story prioritization, and burn-up/burn-down chart utilization.
- Conducted comprehensive GAP analysis, identifying and documenting discrepancies between scheduling systems to align functionalities with business objectives.
- Leveraged clustering algorithms and regression analysis to analyze customer purchasing behavior, creating targeted marketing strategies that boosted retention by 12% in the first quarter of the implementation.
- Utilized RUP methodology to manage the complete lifecycle of projects, from the inspection phase to the transition phase, ensuring seamless workflow and delivery.
- Extensively involved in implementing effective requirements practices, including gathering and analyzing User Requirements Documents (URD) and Functional Specification Documents (FSD) to ensure accurate process alignment.
- Facilitated over 15 JAD sessions and workshops with stakeholders and SMEs, gathering critical requirements and fostering collaboration across teams.

- Involved in developing and deploying machine learning models using Python to forecast business outcomes, resulting in a 10% improvement in predictive accuracy for sales and marketing strategies.
- Designed and implemented data mappings to transform data according to business rules, reducing manual effort by 15% and improving process accuracy.

COGNIZANT – INDIA

Data Analyst

| Jun 2020 – Aug 2023

- Utilized Agile methodologies to facilitate and organize Sprint Planning, Daily Scrums, and Sprint Reviews, ensuring continuous alignment with project objectives and stakeholder expectations.
- Spearheaded creation of Business Requirements Documents (BRD) by collaborating closely with business stakeholders, ensuring alignment with project goals and delivering 10% faster cycle time for user story finalization.
- Managed project progress through meticulous tracking and analysis, providing actionable recommendations that improved integration mapping accuracy by 20% across multiple projects.
- Wrote efficient SQL queries and procedures to streamline data workflows, reducing query execution time and improving overall system performance.
- Authored and maintained comprehensive Functional Specification Document (FSD), UML diagrams, and technical documentation for multiple projects, ensuring clear communication of system requirements.
- Served as a liaison between external clients and SMEs to standardize and generate product requirements specifications such as URS/FRS and Use Cases, facilitating clear communication and alignment.
- Worked closely with cross-functional teams, including development, QA, and business units, to ensure that new application functionalities met business needs and integrated effectively with existing systems.
- Provided strategic support for Business Intelligence activities by leveraging Python and SQL to create reports and develop practical solutions for operations, engineering, and sales departments.
- Transformed standalone reporting into a coherent and extensible ETL workflow using Python and SQL, enhancing data integration and accessibility.
- Employed UML methodology to create detailed diagrams, including Use Cases, Sequence Diagrams, and Activity Diagrams, resulting in a 25% improvement in process documentation clarity.
- Wrote complex, efficient, and accurate SQL queries, utilizing massive datasets and incorporating Pandas for robust data manipulation and analysis.
- Designed foundational dashboards using Matplotlib and other visualization tools, enabling executives to grasp trends and drill down into detailed insights effortlessly.
- Achieved a 90% reduction in core scripting lines by optimizing Python scripts, thereby improving both readability and accuracy.
- Designed business intelligence dashboards in Power BI to track customer segmentation and insurance policy performance, leading to a 12% increase in cross-selling opportunities.
- Automated the quarterly business review process using Python scripts, enhancing reliability and allowing team leads to focus more on trend analysis rather than report creation.

EDUCATION

Masters of Business Analytics

| Jun 2025

University of Dayton, OH

ACADEMIC PROJECT

E-commerce Product Recommendation System

- Optimized product discovery by implementing item-item collaborative filtering, boosting click-through rates by 25% and enhancing personalized recommendations, leading to a 20% increase in user engagement.
- Conducted data-driven analysis using classification algorithms and association rule mining, improving recommendation accuracy for new users by 22% and extending average session duration by 15% through enhanced behavior analytics.
