Full-Stack Developer

Summary

Full-stack developer with 2 years of experience designing and delivering production-ready features end-to-end. Built Java and Spring Boot microservices and React interfaces, managed AWS infrastructure, and maintained CI/CD pipelines. Comfortable owning database schema design, API development, frontend integration, and deployment. Demonstrated ability to support stable production systems and reduce faults through automated testing.

Skills

Languages: Java, Python, JavaScript, TypeScript, SQL

Backend: Spring Boot, Spring Framework, Spring Security, Hibernate, REST APIs, GraphQL, JWT, OAuth 2.0

Frontend: React, Next.js, Tailwind CSS, HTML, CSS, responsive design

Databases & Messaging: PostgreSQL, MySQL, Redis, Kafka, RabbitMQ, Node.js,

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins

Testing & Tools: JUnit, Mockito, Git, Maven, Jira, Agile/Scrum

AI : GCP, RAG, AI APIs (OpenAI, Gemini, Claude)

Experience

Full Stack Developer, *Innovative Intelligent Solutions, Remote*

April 2025–Present

- Architected and deployed RESTful and GraphQL microservices using Java, Spring Boot, Spring Security, and Hibernate, resolving critical reliability issues and increasing system uptime by 30% with improved response times.
- Designed CI/CD pipelines using GitHub Actions, Jenkins, and Maven, automating deployment workflows across Docker and Kubernetes clusters, reducing deployment time by 40%, and accelerating release cycles.
- Launched OAuth 2.0 and JWT authentication mechanisms alongside comprehensive JUnit and Mockito test suites, achieving 85% unit test coverage and eliminating security vulnerabilities in REST APIs and GraphQL endpoints.
- Engineered AWS-based infrastructure (EC2, S3, Lambda) integrated with Spring Boot backends, managing databases (PostgreSQL, MySQL, Redis), and established Kafka-based event streaming for asynchronous communication.
- Conducted root-cause analysis using automated testing frameworks, reducing system failures by 25% and shortening recovery time through systematic debugging and performance optimization.
- Collaborated within Agile/Scrum teams using Azure DevOps and Jira, conducted peer code reviews in Git/GitHub, and documented architecture decisions in Confluence, ensuring full traceability and on-time feature delivery.

Full Stack Developer, *The Candidate Experience (Pro Bono), Remote*

May 2025 – Present

- Designed and executed modern responsive UI components using React, Next.js, and Tailwind CSS, reducing page load time by 25% and ensuring accessibility and consistent cross-device user experience with HTML/CSS best practices.
- Built Spring Boot APIs with Spring JPA, Hibernate, and PostgreSQL/MySQL schemas; instituted REST and GraphQL endpoints integrated with AWS services, reducing manual API response time by 30%.
- Mechanized supply chain workflows by integrating Spring Boot microservices with the n8n orchestration platform and OpenAI/Gemini APIs, eliminating 20+ hours of weekly manual work and reducing data processing errors by 40%.
- Utilized AI capabilities (Claude API, OpenAI API, and Gemini API) and implemented Retrieval-Augmented Generation (RAG) patterns to enhance application intelligence.

Full Stack Developer, *Future Skill Prime, Remote*

June 2022 – September 2022

- Architected backend workflows using Java and Spring Boot to resolve slow processing, improving system efficiency by 30% and stabilizing daily operations.
- Automated build and deployment tasks with Python and GitHub Actions, reducing manual configuration effort by 20% and accelerating releases.
- Created REST APIs in Java to address data-flow issues, enabling reliable communication between backend modules and front-end apps built with Vue and Angular.
- Implemented JDBC connectivity using Java 21 SE and PostgreSQL to improve database access, increasing data retrieval speed by 25%.
- Tested backend services with JUnit and managed version control with Git, reducing post-release defects by 30% and improving long-term maintainability.

Projects

University Vehicle Data Management and Reporting, *Maryville*

August 2024 to December 2024

- Enhanced Spring Boot REST APIs for vehicle incident tracking, reducing resolution time by 30%. Systematized build and release pipelines with Python and GitHub Actions, cutting processing delays by 20%.
- Modeled MySQL schemas and JDBC integrations to ensure consistent vehicle data storage and retrieval. Streamlined workflow execution to improve data accuracy and operational efficiency

Education

Northwest Missouri State University, *Missouri, USA*

August 2023 to December 2024

Master of Science, Information Systems, (*GPA: 3.9/4.0*)

Certifications

- Java Programming Language
- Advanced Software Engineering Job Simulation
