SUMMARY

Data Engineer with 4+ years of experience designing, developing, and optimizing large-scale healthcare data pipelines. Expertise in Azure Data Factory, Databricks (PySpark), Delta Lake, and AWS cloud services. Experienced in HIPAA-compliant data architectures, real-time and batch processing, and creating ML-ready datasets. Proven ability to deliver high-quality, automated, and scalable data solutions in healthcare and insurance domains.

SKILLS

Data Engineering

- ETL/ELT, Data Pipelines, Real-time & Batch
- Processing, CDC, Delta Lake, Data Lakehouse,
- Data Quality

Programming

- Python, SQL, Scala, Shell Scripting, Pandas,
- NumPy

Databases & Warehousing

- Snowflake, Redshift, BigQuery, SQL Server,
- PostgreSQL, MySQL, Oracle

Technologies

- Databricks, Apache Spark (PySpark), Azure Data
- Factory, Azure Synapse, AWS Glue, Redshift,
- Airflow, Kafka, Kinesis

Cloud Platforms

- Azure (ADF, Databricks, Synapse) - Strong AWS
- (S3, Glue, Lambda, Redshift, EMR) - Intermediate
- GCP (BigQuery, Dataflow) - Basic

DevOps & Tools

- Git, Jenkins, Terraform, Docker, Kubernetes
- (basic), Great Expectations, Looker, Power BI,
- Tableau

Compliance & Governance

- HIPAA, PHI data handling, Data Lineage
- (Amundsen, DataHub)

PROFESSIONAL EXPERIENCE

Data Engineer

Tenet Health

Aug 2024 – Present

- Designed and implemented Azure Data Factory and Databricks (PySpark) pipelines to ingest, transform, and process 10TB+ healthcare data per month, including patient records, claims, and provider data.
- Built Delta Lake-based Lakehouse architecture, improving query performance and supporting advanced analytics.
- Developed robust data quality frameworks using Great Expectations and PySpark validators to ensure accuracy and reliability in patient care metrics.
- Created ML-ready datasets for predicting patient readmission and chronic disease progression in collaboration with data scientists.
- Implemented FHIR and HL7 ingestion pipelines from EHR systems (Epic, Cerner) using real-time connectors.

- Maintained HIPAA compliance via encryption, RBAC policies, and monitoring access logs.
- Delivered interactive dashboards using Power BI and Looker to support clinical and operations teams.
- Supported limited AWS workloads, including S3 ingestion and Redshift integration with legacy systems.

Data Engineer

Jan 2021 – Dec 2023

HCL Technologies

- Built and maintained cloud-native ETL pipelines on Azure Data Factory and Databricks for healthcare insurance clients, handling structured and semi-structured datasets.
- Transformed large volumes of claims, eligibility, and provider data using PySpark, improving processing efficiency by 60%.
- Migrated on-prem SQL Server workloads to AWS Glue and Redshift, enhancing scalability and performance.
- Orchestrated complex workflows with Apache Airflow and integrated streaming data via Kafka for near real-time analytics.
- Collaborated with BI teams to design dashboards in Tableau for underwriters and actuaries, enabling faster decision-making.
- Implemented data lineage, metadata cataloging, and governance practices to ensure HIPAA and SOC 2 compliance.

EDUCATION

Clarkson university, NY 13699

Jan 2024 – May 2025

Masters in Data science

Parul university, India

Jul 2019 – Apr 2023

Bachelor's of Computer science and Engineering
