

Bhavana Basani

Contact: +1 (804)-388-5958

Email: basanibhavana@gmail.com

Senior Data Engineer

Professional Summary:

- Having 6 years of experience in developing business solutions using ETL tool Informatica PowerCenter (9.6 & higher version).
- 4+ years of hands-on experience in IICS Data Integration (CDI) and migration projects across diverse data sources such as on-prem databases, cloud data stores, SaaS platforms and APIs.
- Involved in Creation and maintenance of PowerCenter & IICS mappings(tasks), workflows(taskflows), source, and targets.
- Experience in secure agent installations Setup and configurations for connecting on-premises systems with cloud environments.
- Design, implementation of real-time and batch data integration pipelines leveraging IICS components like Application Integration, Cloud Data Integration, and Data Quality.
- Configure ETL jobs using tools like Cloud Mapping Designer and Cloud Task Designer to create and maintain data integration workflows and mappings in IICS.
- Lead and support multiple data integration projects simultaneously, ensuring on-time and high-quality delivery.
- Developed reusable IICS assets, mappings, workflows, and templates to accelerate development efforts.
- Leverage IICS Data Quality tools to ensure data accuracy, consistency, and reliability.
- Hands-on experience with cloud data platforms like Azure, Snowflake, AWS S3.
- Proficiency in integrating with APIs (REST, SOAP) and handling JSON/XML data formats.
- Exceptional Oracle/Snowflake SQL skills with good understanding of Database, SQL Server, Postgres and MySQL.
- Good knowledge in Linux, Unix shell/Python scripts for automation of production job.
- Experience with external Scheduling tools like TWS, Control-M, Autosys.
- Experience with other ETL tools like Matillion for integrating various cloud platforms.
- Basic knowledge of Power BI to generate reports on the KPI's generated for business analysis.
- Lead the design and implementation of ETL processes to integrate data across Salesforce, MS Access DB, SQL databases, and file-based systems.
- Knowledge of Data marts, EDW and ODS, data warehousing concepts, BI architecture, Erwin data modeling techniques and schema designs (e.g., star, snowflake schemas).
- Extensive experience in strategizing roadmap projects, data modeling, designing ETL framework and data mart life cycle development and providing technical supervision on implementation of large end-to-end Data Warehouse applications.
- Design and implement application integration solutions using IICS components like Processes, Service Connectors, and Process Objects
- Develop and integrate APIs to facilitate seamless data exchange between systems.
- Demonstrated ability to load data into Salesforce and implement listeners in IICS to monitor Salesforce platform events.
- Participated in Waterfall methodologies and Agile development processes, including Sprint Planning, Daily Stand-ups, Sprint Reviews, and Retrospectives.
- Experience in smooth and efficient code deployment in IICS Alpha, BETA, UAT and Production.
- Experience in dev tools such as Jira, Confluence. Familiarity with DevOps practices CI/CD pipelines, and version control systems (e.g., Git, Bitbucket).
- Enforced data governance policies, including compliance with data security standards (e.g., GDPR, HIPAA).
- Capable of monitoring, identifying bottlenecks, tuning and optimizing queries, optimizing data processing using parallelism and independently providing solutions.
- Worked in a 24x7 environment support which requires on-call rotation.
- Proficient in Microsoft Office (Outlook, Excel, Word, PowerPoint, Access) for data analysis and data profiling.
- Participate in client-facing meetings to present and review integration designs, resolve technical queries, and provide progress updates.
- Experience in Working closely with data architects, analysts, and business stakeholders to understand data requirements and translate them into technical solutions.
- Staying up to date with the latest IICS features, cloud technologies, and data integration trends, bringing innovative solutions to the team
- Strong business understanding of verticals like Banking, Brokerage, Insurance, Mutual funds and Pharmaceuticals.

Technical Skills:

- **ETL Tools:** Informatica PowerCenter, IICS CDI, Informatica Administration, PowerBI, Boomi, Oracle E-Business Suite
- **Database Management:** Snowflake, PostgreSQL, MySQL, Oracle, SQL Server
- **Languages:** SQL, Python, Linux, SSIS

- **Big Data Technologies:** Hadoop
- **Data Modeling:** Star Schema, Snowflake Schema, Data Analytics experience, Data Warehouse Methods (SSIS, Stored procedures, Views)
- **Cloud Platforms:** Azure, AWS S3
- **Version Control:** GitHub, Bitbucket, Jenkins CI/CD
- **Ticketing Tools:** PagerDuty, ServiceNow, BMC Remedy, JIRA (Agile & Waterfall), Confluence
- **Scheduling Tools:** TWS(Tivoli), Control-M, Autosys, Informatica Scheduler

Certifications:

- Python: Comprehensive Bootcamp (Beginner to Professional) from Udemy!
- AZ-900 Microsoft Azure Fundamentals
- Informatica Cloud Data Integration Bootcamp.

Professional Experience:

Client: ADP Pvt Ltd -India
Role: Senior Data Engineer

Nov '21 – Jul '23

Description:

Automatic Data Processing, Inc. (ADP) is an American provider of human resources management software and services, headquartered in Roseland, New Jersey. Data is retrieved from various sources like SQL Server, Mainframe, Salesforce etc which will be loaded into EDW/Salesforce/Snowflake based on different frequencies as per the requirement. The entire ETL process consists of source systems, staging area, Datawarehouse and Datamart.

Responsibilities:

- Collaborated with business analysts, product owners, and third-party vendors to gather and refine requirements, ensuring solutions are aligned with business objectives.
- Created mappings in Cloud Mapping Designer, PowerCenter according to the technical requirements that meet business needs.
- Created complex mappings having an average of 15 transformations in IICS Data Integration.
- Used Tasks like Mapping Tasks, Synchronization Tasks, Replication Tasks for automating ETL operations.
- Developed Taskflows to orchestrate multiple tasks and define dependencies between staging and fact tables in loading of KPI's.
- Utilized Source and Target Transformations to extract data from multiple sources, including cloud platforms (AWS S3, Snowflake, Snowflake) and on-premises databases (Oracle, SQL Server).
- Applied Lookup Transformations to retrieve reference data dynamically and implemented Filter Transformations to exclude invalid or unwanted records before loading into Datawarehouse.
- Worked on many transformations like Lookup, Filter, Joiner, Aggregator, Router, Sorter, Sequence generator, Pivot and Unpivot Transformations and on Pushdown Optimization to enhance performance.
- Implemented pre- and post-processing logic for ETL workflows using advanced IICS features like parameterization and reusable tasks.
- Implemented Parameterization for incremental data loading, dynamic data processing, reducing manual configuration.
- Implemented data movement pipelines between on-premises and cloud systems using IICS Secure Agents.
- Used Replication Tasks to replicate large datasets for backup or synchronization purposes.
- Designed real-time data integration pipelines using REST API Tasks and Web Services to fetch and process live data feeds of customers.
- Successfully integrated data from over 10 different sources into Snowflake using IICS, reducing manual processing time by 40%.
- Connected to diverse data sources using Connectors (e.g., Salesforce, AWS S3, Azure Blob Storage, Google BigQuery) and worked on pre-built connectors for applications like Workday, NetSuite, and Salesforce
- Implemented API-based data pipelines to retrieve dynamic datasets, including financial transactions, customer information, and product details, reducing manual interventions.
- Worked with POST and GET methods to exchange data between enterprise systems securely, ensuring compliance with organizational data policies.
- Worked with bulk mode for large sets of data and verbose for debugging the data. Worked in setting up notifications and error-handling workflows for job failures and system alerts
- Worked with many taskflow Components like Start/End Task, Assignment, Decision, Wait, Parallel Path, File Watch Task
- Transferred financial sensitive data files via SFTP, ssh from one server to another.
- Develop and test APIs with native connectors for AWS, Azure, Google Cloud, Salesforce, and other platforms like Postman.

- created mapping using parallel processing for large amount of revenue data.
- Designed parameterized mappings that streamlined environment migrations (Dev, QA, Prod) and minimized deployment errors.
- Implemented error-handling mechanisms to capture, log, and resolve issues during ETL execution.
- Debugged mappings and workflows to identify bottlenecks and data inconsistencies independently.
- Monitored ETL jobs using the IICS Monitor Dashboard for real-time insights into job performance.
- Coded Unix Scripts, PL/SQL scripts to capture data from different relational systems to flat files to use them as source file for ETL process
- Developed Staging mappings, workflows in Informatica, complex Mapplets, PL/SQL Procedures triggers and per-formed unit testing which involved SCD Type1 and type2.
- Worked with data quality using validation rules and cleansing logic within mappings.
- Implemented governance policies for metadata management and lineage tracking.
- Monitored job runs using the IICS Monitor Dashboard and resolve job failures promptly.
- Performed data conversion from OLTP to DW using tools like SSIS/Data Factory.
- Extensive Experience in Unix Shell scripting, AWK and File manipulation techniques.
- Worked on data cleansing, data validation and data wrangling and metadata management concepts in IICS.
- Provided Level 2/3 support for production issues related to IICS integrations.
- Created and scheduled Sessions, Jobs based on demand, and using IICS scheduler and external schedulers like Autosys, TWS & Control-M.
- Provided post-implementation support and troubleshooting as needed.
- Led a team of 3 members in offshore management.
- Documented system configurations, procedures, and best practices in confluence.
- Worked with QA teams to address defects and validate requirements.
- collaborated with cross-functional teams to deliver high-quality, scalable, and efficient data solutions that support the organization s analytics and operational needs.
- Have Excellent analytical and problem-solving skills
- Strong communication and interpersonal skills
- Ability to work independently and as part of a team.

Client: Argos UK supermarket, India
Role: Senior Data Engineer

Jun '20 –Nov '21

Responsibilities:

- Created mappings, workflows according to the business logic using ETL tools Informatica Cloud Intelligent Services (IICS), Informatica PowerCenter 10.2/9.6/9.1/8.6.
- Replicated around 150 mappings from PC to IICS using replication & synchronization tasks.
- Developed Staging mappings, workflows in Informatica, complex Mapplets, PL/SQL Procedures triggers and per-formed unit testing and Involved SCD types Type1 and type2
- Developed various mappings using Mapping Designer and worked with Aggregator, Lookup, Filter, Router, Joiner, Source Qualifier, Expression, Stored Procedure, Sorter, Hierarchy and Sequence Generator transformations in Powercenter,IICS
- Wrote and optimized complex SQL queries and PL/pgSQL stored procedures for backend operations, improving over-all system performance and worked on query optimization tools like SQL Trace, Explain Plan etc.
- Developed ETL scripts to import/export data from PostgreSQL to other systems (including AWS S3 and external APIs), enabling seamless data integration.
- Performed data conversion from OLTP to DW using tools like SSIS/Data Factory.
- Utilized Informatica's workflow designer to create reusable components and mappings, reducing development time for new projects by 35%.
- Worked on various Tools such as Informatica PowerCenter 9,10.2.0, SQL developer, Putty, Toad, interacting with the clients on a regular basis to discuss day-to-day issues and matters
- Collaborated with database, Network, Unix administrators in the patch upgrades and security model, backup, and fail-over / recovery operations for Informatica platform.
- Designed and optimized ETL workflows in Informatica PowerCenter, achieving a significant reduction in data load times from 100 minutes to 50 minutes by implementing parallel processing and partitioning strategies.
- Automated routine ETL jobs using scheduling tools, reducing manual intervention and improving operational efficiency by 30%.
- Worked on coding the Python scripts for the automation of monthly runs in informatica.
- Experienced with healthcare analytics, Revenue Cycle Management (RCM), or financial systems.
- Solid knowledge of large-scale EMR systems and their integration into BI frameworks.

- Implemented automated monitoring solutions to track ETL job statuses and alert administrators of failures, improving incident response time by 65%.
- Developed SQL queries for Monthly validation. In case of any failures, truncated the data manually and loaded by using ETL mappings on the same day to avoid any financial losses.
- Developed complex mappings and transformations to cleanse and aggregate data from multiple sources, improving data accuracy and reducing data redundancy by 40%.
- Collaborated with data architects to establish best practices for data integration, leading to a streamlined ETL process and a 25% decrease in job failures.
- Implemented error handling and recovery mechanisms in ETL processes, enhancing reliability and ensuring uninterrupted data flow.
- Understand and study new features released by IICS, Informatica, educate the ETL team by sharing the knowledge.
- Conducted regular health checks and audits of Informatica repositories and workflows, ensuring adherence to best practices and regulatory compliance.
- L2 Support to the environment in the non-business hours for smooth flow of business.
- Worked on stories assigned by the Users in ALM portal & JIRA within fixed time duration to meet the monthly runs. And worked closely with business stakeholders to gather requirements and design ETL solutions that aligned with business needs, resulting in a 15% increase in user satisfaction.
- Performed Unit testing, Integration testing and System testing of Informatica mappings
- Involved in data analysis and handling the Service Now requests by interacting with business analysts, clients and customers and resolve the issues as part of production support
- Involved in tracing the issues ahead of reaching to any kind of priority issues hence preventing serious business scenarios and Leading major incident calls, leading problem management and writing post problem reviews
- Participate in Daily Status meetings and providing detailed Status Reports with Business Analysts to meet the Target date to accommodate the new changes in the design
- Handled Code migration process, which needs to be fulfilled to move the code to other environments
- Managing the DEV/QA/UAT/PROD environments with High Availability
- Provided troubleshooting and diagnostic support. Incident, problem and service outage management

Client: Kaiser, Accenture -India
Role: ETL Developer

Nov '17 – Jun '20

Responsibilities:

- Created and maintained detailed documentation for ETL processes, including mapping specifications and job run schedules, facilitating knowledge transfer and process continuity.
- Effectively used Informatica parameter files for defining mapping variables, workflow variables, FTP connections and relational connections.
- Involved in enhancements and maintenance activities of the data warehouse including tuning, modifying of stored procedures for code enhancements.
- Wrote SQL queries to generate reports and analytics, supporting business decision-making.
- Participated in code reviews and mentoring sessions for junior developers, fostering a collaborative environment and enhancing team skills in Informatica best practices.
- Assisted in the design and implementation of PostgreSQL database schemas and tables for new applications.
- Collaborated with senior developers to tune slow-running queries, improving application performance.
- Performed data migrations and imports from legacy systems to PostgreSQL, ensuring data integrity and completeness.
- Provided L2 24/7 support for the job failures and remediated the error before business hours
- Supported P1/P2 issues resolution and team engagement to resolve the issues before loading the data in main target tables.
- Communicated with business customers to discuss the issues and requirements.
- Used Informatica file watch events to poll the FTP sites for the external mainframe files.
- Performance tuning was done at the functional level and map level. Used relational SQL wherever possible to minimize the data transfer over the network.
- Effectively worked in Informatica version-based environment and used deployment groups to migrate the objects.
- Used debugger in identifying bugs in existing mappings by analyzing data flow, evaluating transformations.
- Effectively worked on Onsite and Offshore work model.
- Pre and post session assignment variables were used to pass the variable values from one session to other.
- Designed workflows with many sessions with decision, assignment task, event wait, and event raise tasks, used informatica scheduler to schedule jobs.
- Reviewed and analyzed functional requirements, mapping documents, problem solving and trouble shooting.
- Performed unit testing at various levels of the ETL and actively involved in team code reviews.

- Identified problems in existing production data and developed one-time scripts to correct them.
- Fixed the invalid mappings and troubleshoot the technical problems of the database.

Education:

Sreenidhi Institute of Science and Technology, Hyderabad, Telangana, India.

Duration: May 13' to May 17'
