Experience

Software Developer, Accenture – Mexico

December 2022 – July 2024

- Implemented new features in banking application's by refactoring legacy Java components, resulting in improved system efficiency and maintainability
- Developed batch applications in Java to process Sybase database records, ensuring seamless deployment from development to production environments
- Processed large CSV datasets using Java I/O streams, parsing and validating each record to apply business logic and ensure database data remained accurate and up-to-date
- Optimized SQL queries from existing apps through restructuring, reducing execution time by 30% for large data files
- Created Bash scripts to automate batch application execution based on conditions, increasing operational efficiency
- Collaborated with cross-functional teams to resolve codebase, database, and design issues, improving development efficiency and higher customer satisfaction

Software Development Intern, El Colegio de la Frontera Sur – Mexico

July 2022 – December 2022

- Developed a mobile app with React Native and TypeScript for tree records management, reducing processing time by 80% compared to traditional paper-based methods
- Built a RESTful API using Java, Spring Boot, and MySQL, with JUnit testing coverage to ensure high code quality and system reliability
- Created a SQLite database for offline usage in the app, with a server backup system to ensure data integrity when online
- Automated the migration and validation of 10,000+ records from Excel files to a MySQL database using Bash scripts, ensuring data accuracy and integrity

Projects

Fullstack Customer Management Application

github.com/customerManagement-WebApp

- Deployed a Java/Angular full-stack web application on AWS Amplify that allows for admin task management, service requests, and user authentication
- Implemented MFA using Email and Twilio, with detailed account activity logs for traceability and security
- Created Docker containers for both app and database, enhancing scalability and simplifying environment management

AI Food Nutrition Score App

github.com/FoodScannerApp

- Developed a mobile app using React Native that calculates a nutrition score based on food product data
- Integrated Google's Machine Learning Kit to scan barcodes via camera, enabling easy access and improving searchability
- Created a backend service with Java and Spring to calculate nutrition scores and child-suitability based on nutrition facts
- Implemented AI to analyze recent food consumption and deliver user insights, reducing manual tracking effort

Skills

Languages: Java, TypeScript, JavaScript, SQL, Bash, PHP, HTML, CSS, JSON, YAML

Technologies/Frameworks: React, React Native, Spring Boot, Angular, MySQL, Firebase, MongoDB, Sybase, PostgreSQL, Node.js, Tailwind CSS, REST APIs, AWS (Amplify, S3), Elasticsearch, JUnit

Developer Tools: Linux, Git, Postman, Docker, Control-M, npm, Maven, Gradle, Jira, GitHub Actions, Swagger/OpenAPI

Education

Universidad Politécnica de Bacalar – Quintana Roo, Mexico – BS in Software Engineering

December 2022
