

CHAITANYA TANGELLAMUDI

Data Engineer | ETL, BI & Microsoft Fabric Developer

Email: chaitanyat1503@gmail.com | Contact: +1 646-203-3221

PROFESSIONAL PROFILE

Experienced Data Engineer with over 10 years specializing in full-cycle DataWarehousing, Cloud Migrations, and Advanced Analytics. Proficient across the Microsoft Azure stack, Microsoft Fabric, Snowflake, modern ETL/ELT orchestration and DevOps practices, with a focus on optimizing data pipelines and delivering executive-level reporting.

- **Cloud Data Orchestration (Azure & Fabric):** Experience in Azure Data Factory (ADF) for designing and executing complex data pipelines. Successfully migrated multi-source data (On-premises, Salesforce) into Azure Data Lake Storage (ADLS) and Fabric OneLake environments. Utilized custom Python/PySpark scripts for data transformation before loading into Snowflake.
- **ETL and Data Processing:** Experience in SSIS and Informatica PowerCenter (10.x), focusing on high-performance transformations, deployment, and workflow automation. Developed and managed scalable ETL pipelines with Apache Airflow, loading diverse data into Snowflake. Engineered advanced data transformations and ingestion using Snowpark Python DataFrames within Snowflake.
- **Data Warehousing (Snowflake Analytics & SQL):** Snowflake Power User skilled in optimizing query performance for large-scale, semi-structured datasets through techniques like Materialized Views, Window functions, and Regex. Managed and enhanced Snowflake Database, Schema, and Table structures to support new reporting requirements. Technical knowledge of Snowflake Cortex AI functions (including LLM inference, text extraction) to build intelligent data pipelines and process unstructured data directly within the warehouse.
- **Business Intelligence & Visualization:** Advanced Visualization Specialist with a proven ability to design executive-level dashboards using Power BI and SSRS. Expertise includes complex DAX functions and drill-through capabilities to facilitate strategic decision-making.
- **DevOps and SDLC Integration:** Skilled DevOps Integrator experienced in the full Software Development Life Cycle (SDLC) using Azure DevOps and Visual Studio 2022. Practices include version control, CI/CD, branching strategies, and seamless production deployments via Pull Requests.
- **Strategy and Problem Solving:** Technical Strategist adept at translating complex functional requirements into robust Technical Specification Documents. Recognized for driving system efficiency and data integrity through rigorous Query Optimization, ETL performance tuning, and leading User Acceptance Testing (UAT).

TECHNICAL SKILLS

Category	Skills
Cloud & Data Engineering	Microsoft Fabric (OneLake, Lakehouse, Warehouse), Azure Data Factory, Azure DevOps, Azure Log Analytics Workspace, Azure AI, Azure Databricks
BI & Reporting	Power BI, SSRS, OBIEE 10.x/11.x, Tableau 2020.3/2019/9x/ 10x, POWER BI Report Builder, Qlik sense, Crystal Report, Excel
ETL & Data Warehousing	SSIS, Informatica Power Center 10.2/9.x, Datawarehouse Administration Console (DAC), Snowpark, Airflow
Databases & Languages	Snowflake, Oracle, Microsoft SQL Server,T-SQL, Teradata, DB2, PL/SQL, Python, PySpark
Tools & Environments	Github, Visual Studio SQL Server Management Studio (SSMS), DAX Studio, Linux
Methodologies	Agile, Waterfall.

PROFESSIONAL EXPERIENCE

Rabo Agrifinance, St Louis

Data Engineer | April 2021 – Present

- Spearheaded end-to-end data migrations from legacy platforms through Oracle and SQL Server, culminating in a modern Azure cloud ecosystem.
- Built dynamic data pipelines using Fabric Data Factory to securely ingest multi-source enterprise data, including Salesforce and relational databases, directly into OneLake.
- Transitioned traditional staging structures and files into the modern Fabric Lakehouse architecture, storing production datasets in optimized Delta Parquet formats.
- Configured Fabric Shortcuts to seamlessly reference existing data assets in Azure Data Lake Storage (ADLS) without duplicating physical storage blocks or increasing costs.
- Designed and deployed enterprise Azure Data Factory (ADF) pipelines to ingest data from heterogeneous sources (including Salesforce and on-premises databases) into Azure Data Lake Storage (ADLS) in optimized Parquet format.
- Configured linked services, global parameters, and complex orchestration activities (Data Flow, Execute Pipeline, Copy Data) to establish a modular, reusable pipeline framework.
- Developed high-performance Fabric Notebooks using PySpark to clean, transform, map, and prepare unstructured and semi-structured datasets for production schemas.
- Conducted advanced ETL processing within Azure Databricks to extract, transform, and integrate relational database sources prior to target loading.
- Migrated legacy data workflows and database processing layers into Fabric Synapse Data Engineering to streamline daily automated execution schedules.
- Boosted report query performance by leveraging Snowflake internal/external stages, Snowpipe for real-time continuous ingestion, and materialized views for high-speed reporting.
- Engineered complex SQL scripts using Window functions, regular expressions, and

semi-structured JSON handling. Utilized Snowflake Clone for zero-copy cloning during testing and Time Travel for disaster recovery.

- Applied technical knowledge of Snowflake Cortex AI functions (text parsing, entity extraction, and fuzzy matching) to clean customer master data, remove duplicates, and process unstructured text natively within the warehouse without external API overhead.
- Connected Power BI dashboards directly to the Fabric Lakehouse utilizing Direct Lake mode, bypassing traditional scheduled import refreshes and delivering instant data access.
- Designed robust star-schema data models inside the Fabric Data Warehouse and wrote optimized T-SQL queries using the SQL analytics endpoint to fulfill complex executive reporting needs.
- Audited and refactored heavy DAX measures—replacing inefficient FILTER operations with KEEPFILTERS and CALCULATE—and configured Aggregation tables to dramatically improve query response times on massive datasets.
- Applied Query Folding to offload transformations to the source server, eliminated high-cardinality metadata to reduce PBIX file size, and optimized scheduled refresh times.
- Developed comprehensive object-mapping and lineage documentation to seamlessly transition legacy SSRS reports and data models to Power BI Cloud.
- Managed end-to-end Power BI Service administration, including gateway configurations, dataset refresh scheduling, row-level security, and ad-hoc reporting via Power BI Report Builder.
- Enforced version control best practices using Git to manage Python scripts, Airflow DAGs, and ETL workflows, ensuring stable release management across environments

HHH Inc, IL

SQL Reporting Developer | January 2021 – April 2021

- Collaborated with Functional Teams to gather requirements, translating them into technical specifications for report development.
- Designed and created various reports (Sub-Reports, Drilldown-Reports, Summary Reports, Parameterized Reports) using SSRS to meet critical business expectations.
- Developed Ad-Hoc Reports using Report Builder and programming services, and generated insightful visualization solutions with Power BI.
- Executed data mapping and transformation by analyzing business requirements to consolidate multiple data sources into a single target database.

Kroger, Lake Mary, Florida

SSRS/SSIS Developer | May 2018 – January 2021

- Applied data analysis techniques to construct reports for Clinical, Pharma and Patients divisions, provided insights into patients enrollments, Sales and Operations improving their process efficiency
- Designed and maintained compliance and regulatory reporting dashboards, critically focusing on monitoring key risk metrics and proactively identifying emerging issue trends.
- Collaborated cross-functionally with Compliance and Regulatory teams to define, develop, and deliver essential data reports, ensuring accurate and timely monitoring of statutory and organizational compliance.
- Developed and deployed robust SSIS Packages for ETL functionality, extracting data from sources (Access, Excel, flat files) and loading into SQL Server, including implementing incremental data loading.
- Designed the Target Schema definition and the complete ETL process using SSIS, leveraging transformations like Conditional Split, Bulk Insert, Merge, and Union All.
- Created common modules within SSIS for sophisticated error checking and logging.
- Developed analytical reports and visualizations using DAX functions (table, aggregation, iteration) in Power BI.

- Managed and delivered Server-based reports using SSRS, creating Parameterized, Drilldown, and Ad-Hoc reports.
- Worked with the Functional Teams to comprehend their requirements to design and develop Jobs that meet business expectations.
- Collaborated with multiple technical teams to develop the necessary lineage and mapping documentation for tables and columns essential for report generation.
- Identified and defined the Datasets for the report generation and wrote the queries for the drill down reports, sub reports.
- Created Ad-Hoc Reporting with Report Builder and Programming Reporting Services.
- Involved in developing the Technical specification documents from the Functional specification documents.
- Involved in mapping multiple data sources to a single target database by analyzing the business requirements that are specified in the functional documents.
- Expertise in creating, managing and delivering Server based reports using SQL Server Reporting Services (SSRS) BI.
- Identified and defined the Datasets for the report generation and wrote the queries for the drill down reports, sub reports.
- Created Ad-Hoc Reporting with SSRS Report Builder and Programming Reporting Services.
- Involved in developing the Technical specification documents from the Functional specification documents.
- Created Sub-Reports, Drilldown-Reports, Summary, and Parameterized Reports in SSRS.
- Developed analysis reports and visualization using DAX functions like table function, aggregation function and iteration functions.
- Creating reports by importing, direct query and live data from various data sources.
- Developed SSIS Packages to extract data from various data sources including Access database, Excel spreadsheets, and flat files into SQL server.
- Involved in the initial load for the project in different environments.
- Created various SSIS packages for the ETL functionality of the data and imported data from various tables.
- Responsible for ETL operation using SQL Server Integration Services and Worked with users in training and support and have experience in incremental data loading.
- Extensively used transformations, control flow, data flow tasks, containers, and event handlers.
- Developed common modules for error checking and logging in SSIS.
- Extensively used SSIS Import/Export Wizard, for performing the ETL operations.
- Performed Data Analysis and Reporting by using multiple transformations provided by SSIS such as data conversion, conditional split, bulk insert, merge, and union all.

Dell, India

Senior BI Developer | July 2014 – July 2015

- Worked as a Senior ETL Developer/BI Developer, implementing Oracle Business Intelligence (OBI) solutions for HR Analytics, impacting global enterprise systems (SABA, TALEO, WORKFORCE).
- Managed and mentored ETL teams (Onsite and Offshore) and was responsible for task management and deadlines.
- Designed and customized Informatica mappings using various transformations (Joiners, Lookup, SQL Transformation & Overrides) for full and incremental data loading.
- Built and managed the OBIEE Data Model Repository (RPD), including physical, logical, and presentation layers, implementing security, and building ad hoc reports and dashboards.
- Executed DAC subject areas and execution plans for daily/weekly data loads and managed repository backups and unit testing.
- Reviewed Informatica Code, Unit Test Cases & Results with the Developers.
- Designed & Customized Informatica mappings according changes & requirements by the business team.

- Created mappings employing various transformations, filters, joiners, lookup, SQL Transformation & SQL overrides etc. to load data from multiple databases into Warehouses and perform the full, incremental loading and processing.
- Extracted and customized the pre-built BI solutions using Oracle BI Apps 7.9.6.4 (HR Analytics).
- Built new DAC subject areas & execution plans to run data loads on a daily/weekly basis.
- Took necessary backups of Informatica repository and DAC repository.
- Performed unit testing of these Workflows from source to staging and staging to warehouse.
- Analyzed & fixed on QA defects made by QA team.
- Built the OBIEE Data model repository (RPD) – Physical, logical and presentation layers required for BI reporting and necessary variables and Initializing blocks to implement security.
- Built ad hoc BI reports and dashboards using OBIEE.
- Deftly managed Cache management, RPD Merging, MUDE Setup.
- Migration of Webcat between environments including refresh of GUID's

Bodhtree Consulting Ltd, India

Informatica and BI Developer | May 2013 – June 2014

- Translated business requirements, making necessary schema changes and creating/modifying Informatica mappings to load data per the OBIEE Model.
- Increased the performance of the mappings and workflows, and ensured data integrity by executing unit and integration test cases.
- Managed and cleaned up the OBIEE repository and data model, building ad hoc BI reports and dashboards, and modifying pre-built BI objects.
- Performed advanced administration, including Cache management, RPD Merging, MUDE Setup, and Webcat migration (with GUID refreshes).
- Understood business requirements and mapped them to existing data warehouse schema and OBIEE Model
- Made necessary schema changes as part of cleaning up process
- Created new mappings and modified existing mappings to load the data as per new schema
- Prepared and executed unit and integration test cases to test the changes
- Enhanced the efficiency of mappings and workflows through performance testing.
- Optimized the OBIEE repository, implementing necessary data model and configuration adjustments.
- Updated pre-built dashboards, and reports, and BI objects to align with the revised data model.
- Developed customized ad hoc BI reports and dashboards using OBIEE.

Solitaire Softech Pvt Ltd, INDIA

SQL BI Developer | February 2009 – May 2013

- Managed the Software Development Life Cycle (SDLC), including detailed design with Rational Rose, configuring database objects, and ensuring environment stability using Log Shipping and linked server setup.
- Developed and optimized database logic with T-SQL Programming (Stored Procedures, Functions, Triggers), performing index tuning for performance improvements.
- Automated data refresh and ETL using DTS packages and SSIS jobs, and created a full suite of SQL Server Reporting Services (SSRS) (Tablix Reports, Matrix Reports, Parameterized Reports, and Sub reports).
- Involved in various phases of Software Development Life Cycle (SDLC) and developed use Case diagrams, Object Diagrams, Class Diagrams, and Sequence diagrams to represent the detail design phase using Rational Rose
- Propping up the new schema changes and additional new features on Development, Staging/QA and Production servers.
- Configured Log Shipping between Primary and Secondary servers.

- Created and executed Stored Procedures and Functions using T-SQL.
- Designed and built database components including tables, indexes, and views.
- Managed performance improvements by dropping and recreating indexes on database tables.
- Established a linked server connection between separate SQL servers.
- Utilized DTS packages for data refreshment across Development and QA/Staging environments.
- Automated rule enforcement and related table updates through the creation of Stored Procedures and Triggers.
- Utilized SSIS to create and manage jobs for automating report generation and cube refresh.
- Designed and created diverse reports, including Tablix, Matrix, Parameterized, and Subreports, using SQL Server Reporting Services (SSRS).

EDUCATION

- **Master's In Information Systems** - Texas A&M International University (TAMIU) - 2016
- **Bachelor of Technology in Computer Science Engineering** - JNTU Hyderabad - 2008

CERTIFICATIONS

- **Snowflake SnowPro Core Certification**
- **Microsoft Certified: Power BI Data Analyst Associate**
- **Microsoft Certified Azure Fundamentals AZ-900**
- Azure DP-200: Implementing an Azure Data Solution
- Oracle Business Intelligence Foundation Suite 11g Certified Implementation Specialist
- Oracle Database 11g Certified
- Sun Certified Java Professional (SCJP)
- ITIL Certified
