SUMMARY

Data Analyst with **5+ years** of experience across **AI, FinTech, EdTech, and Wellness Analytics**, specializing in building scalable multi-cloud data platforms (**AWS, GCP, Azure**), automated **ETL pipelines**, and real-time analytics solutions. Strong expertise in **Python, SQL, dbt, Airflow, BigQuery, Databricks, and Power BI** with a proven record of modernizing data systems, improving pipeline performance, and enabling data-driven decision-making. **Actively seeking roles** where I can drive innovation, data reliability, and business value through scalable engineering.

AWARDS

Associated with DXFactor Solutions

- Received Spot Award (x2), and “Employee of the Year (2021)” for excellence in project delivery

WORK EXPERIENCE

BLUEGEN AI

Data Analyst

Remote, USA

May 2024 - Present

Delivered end-to-end data engineering solutions as part of the Data Analytics team, modernizing enterprise data infrastructure and enabling leadership to access real-time performance insights

Project 1: Modernize the analytics stack by migrating from SQL Server to PostgreSQL and automating cross-system data integration between CRM and MRM platforms, improving data reliability, accelerating reporting cycles, and supporting data-driven decision-making across business teams

- Migrated legacy **SQL Server** environment to **PostgreSQL** using Python-based dbt pipelines, **reducing onboarding time by 60%** and improving analytics consistency
- Delivered dynamic **Tableau** dashboards for **10M+** records, enhancing real-time operational and financial analytics and enabling data-driven decisions across business teams
- Developed scalable data and ML pipelines using **Python**, leveraging **Pandas, NumPy, Scikit-learn, TensorFlow**, and **Keras** to automate analytics, build predictive models, and improve decision-making accuracy
- Automated reporting using advanced **Excel** functions, pivot tables, Power Query, and macros, reducing manual analysis time and improving business insights delivery
- Designed and implemented **Python** and **PySpark** workflows orchestrated with Airflow to unify CRM and MRM datasets, **increasing data availability by 70%**
- Automated validation, logging, and monitoring layers within **Airflow** to reduce downstream data issues and maintenance overhead proactively
- Optimized query performance and schema architecture, **reducing dashboard load times by 35%** and improving reporting responsiveness for executive stakeholders
- Implemented **CI/CD pipelines** for **dbt** projects, reducing release cycles from 7 days to 2 days and enabling version-controlled deployments

EDPLUS

Data Analyst

Scottsdale, USA

Jun 2023 - May 2024

Delivered analytics and data engineering initiatives supporting marketing and academic strategy teams to enhance engagement visibility and student retention

Project 1: Built a unified analytics ecosystem combining marketing, behavioral, and learning data, standardizing pipelines in BigQuery and Looker Studio to increase data accuracy by 50%, improve reporting reliability, and enable leadership to make timely, insight-driven decisions

- Developed **advanced SQL transformations in BigQuery** to process and analyze Google Analytics and Optimizely data, **improving data accuracy and reporting reliability by 50%**
- Built interactive **Looker Studio dashboards** visualizing engagement and conversion metrics for **20K+** students, enabling data-driven marketing decisions
- Automated ingestion of Optimizely data into **BigQuery** using **Terraform** and scheduled workflows, **saving 3 hours** weekly in manual data prep
- Conducted **A/B testing** for **10+** marketing campaigns reaching 50K users, identifying conversion patterns and driving 8% higher engagement

- Integrated marketing, behavioral, and **CRM** datasets into a unified **BigQuery** warehouse to eliminate duplication and establish a single source of truth
- Implemented automated data validation rules and documentation templates to ensure reproducibility and trust in analytics outputs

DXFACTOR SOLUTIONS

Data Engineer

Gujarat, IND

Dec 2019- Dec 2022

Delivered data platform modernization projects across fitness-tech and fashion-technology clients, enabling scalable analytics, cost optimization, and machine-learning integration

Project 1: Engineered ETL pipelines using Python, dbt, Kafka, and PySpark, migrating workloads from AWS to GCP to enhance scalability and cost efficiency, reducing end-to-end runtime by 35% and improving data freshness for financial reporting

- Designed and optimized end-to-end **ETL pipelines** using Python, SQL, and dbt with **Kafka** integration, reducing pipeline runtime by **35%**
- Built **PySpark** connectors to ingest and normalize multi-domain data (financial transactions, membership, and attendance logs), **reducing extraction time by 55 minutes** and improving downstream analytics latency
- Implemented automated validation and anomaly detection within **Airflow DAGs**, minimizing production errors and improving system reliability
- Exposed 100+ business **KPIs** through **REST APIs** integrated with **Tableau** dashboards, providing real-time visibility for executive decision-making
- Leveraged **Databricks** for iterative Spark job development and orchestration, reducing dev-to-prod cycle time and simplifying cluster management

Project 2: Developed a computer-vision-based ML pipeline using BlazePose and TensorFlow to generate precise body-measurement predictions from user videos, automating 90 GB/day of processing and improving fit-recommendation accuracy for the brand's customers

- Developed a scalable ML data pipeline using **Python** and **PySpark** to process over 90GB/day of user-uploaded videos for posture and measurement analysis
- Implemented **BlazePose**, **OpenCV**, and **TensorFlow**-based models to extract human pose keypoints, enabling accurate body measurement estimation and product fit recommendations
- Built pre-processing and post-processing frameworks for image normalization, inference, and metric storage in structured **BigQuery** and **PostgreSQL** formats
- Automated model execution and validation pipelines in Airflow to ensure traceability, reproducibility, and reliability of daily ML operations
- Delivered interactive Tableau dashboards showcasing body measurement insights, demographic patterns, and model accuracy KPIs for product and marketing teams

PROJECTS

Misinformation Detection with Large Language Models: A Multi-Paradigm Approach

- Applied transformer-based **LLMs** (Llama-2, 7B) using zero-shot, few-shot, and supervised learning, leveraging advanced NLP techniques for misinformation detection and text classification
- Fine-tuned models achieving **87%** Macro F1 Score, demonstrating proficiency in **NLP**, **LLM** architectures, and applied **ML workflows**

Invoice Validation Using OCR

- Developed an invoice validation pipeline using **Tesseract OCR**, **OpenCV**, and **CNNs** for classification and information extraction
- Reduced manual effort by 5 hours weekly through automation, improving accuracy and consistency in financial validation workflows

Rental Autonomous Vehicles

- Built a web-based application for renting autonomous vehicles, integrating **Python**, **AWS cloud services**, and CARLA Simulator
- Streamlined booking and simulation workflows, enabling real-time testing of autonomous driving scenarios and improving system scalability for multi-user environments

SKILLS

- **Programming & Data Engineering:** Python (NumPy, Pandas, Scikit-learn, PyTorch), SQL, Scala, PySpark, Apache Spark, Hadoop, Apache Kafka, dbt, Databricks, Airflow, ETL/ELT Pipelines, REST APIs
- **Cloud Platforms:** AWS (S3, Redshift, Lambda, Glue), Azure (Data Factory, Synapse, Databricks), Google Cloud Platform (BigQuery, Dataflow, Cloud Storage)

- **Databases & Warehousing:** PostgreSQL, MySQL, SQL Server, Snowflake, BigQuery, Redshift, MongoDB, DynamoDB
- **DevOps & Containerization:** Docker, CI/CD, Git, Jenkins, Terraform, MLflow
- **Business Intelligence & Visualization:** Power BI, Tableau, Looker, LookML, DAX, Power Query, A/B Testing, Experimentation Frameworks
- **Data Processing & Big Data Tools:** Apache Spark, Kafka, Hive, HBase, Flink
- **Machine Learning & Analytics:** Scikit-learn, PyTorch (optional), NLP, Statistical Modeling, Forecasting, A/B Testing, Experiment Analysis
- **Tools & Frameworks:** Salesforce (data), Linux, Shell Scripting, JIRA, Confluence

EDUCATION

ARIZONA STATE UNIVERSITY

MS in Computer Science (GPA: 3.87/4)

Arizona, USA

Jan 2023 - Dec 2024

AHMEDABAD UNIVERSITY

B.Tech Information & Communication Technology

Gujarat, IND

Aug 2016 - May 2020
