EDUCATION

University of Texas at Arlington

Master of Science in Computer Science (CGPA: 3.9 / 4.0)

Aug 2022 - May 2024

Arlington, Texas, USA

- **Courses:** Web Data management, Design and Analysis of Algorithms, Artificial Intelligence, Bigdata analysis and cloud computing, Software Engineering, Machine Learning, Distributed Systems.

Koneru Lakshmaiah Education Foundation

Bachelor of Engineering in Computer Science (CGPA: 9.2/10)

Jun 2018 - Apr 2022

Vijayawada, India

- **Courses:** Web Dev., Computer Networks, Network Security, Database Management, Project Management, Enterprise Programming.

SKILLS

Languages: C, Python, Java

Frontend: HTML, CSS, JavaScript, React.js

Backend: Node.js, Spring Boot

Database: MySQL, MongoDB.

Libraries: NumPy, Pandas, Seaborn, ggplot2, dplyr

EXPERIENCE

Software Engineer Intern

Agile Solutions Private Limited

Aug 2020 – Dec 2020

Remote, India

- Participated in the full software development lifecycle, focusing on both frontend and backend development.
- Managed and optimized databases using MySQL to ensure efficient data storage and retrieval processes, including schema design, writing SQL queries, and performing routine database maintenance.
- Collaborated closely with cross-functional teams, including product managers and designers, to implement features based on user stories and business requirements.
- Utilized Git for version control and issue tracking.
- Worked with team members to test and debug API calls using Postman.
- Worked in an agile environment, Git for version control. Actively participated in team discussions, code reviews, and knowledge-sharing sessions.

Java Full Stack Developer

Agile Solutions Private Limited

Jan 2021 – May 2022

Remote, India

- Promoted to a full-stack developer role, continuing to contribute to the full software development lifecycle, with a primary focus on both frontend and backend development using React.js and Spring Boot.
 - Collaborated with senior developers to design and implement user interfaces, focusing on responsive design and user experience improvements. Helped troubleshoot and resolve UI-related issues to enhance the application's look and feel.
 - Worked closely with product managers to translate business requirements into technical solutions.
 - Analyzed requirements, estimated task durations, and participated in sprint planning to ensure timely delivery of features.
 - Developed, tested, and integrated RESTful APIs to ensure smooth communication between the frontend and backend services.
 - Created endpoints for new features, conducted unit testing, and collaborated with other team members to validate API calls using Postman.
 - Employed Docker for containerization of applications and helped set up local development environments for team members to ensure smooth and consistent development workflows.
-

- Developed and implemented a custom CRM system that streamlined client interactions, enabling more efficient communication and data tracking
 - Actively enhanced enterprise-level microservice business applications across the project lifecycle, from comprehensive analysis and proficient development to seamless implementation and dedicated production support.
 - Leveraged Spring Boot's integration with Spring JDBC and Spring JPA for seamless database interactions, implementing efficient data access layers and optimizing query performance for complex data operations.
 - Developed RESTful services using Spring Boot, ensuring seamless and efficient communication between microservices and the front-end application.
-

PROJECTS

Performance Of MSC Academic Program | *HTML, CSS, JavaScript, ReactJS, PHP*

Aug 2023-Dec 2023

- Designed a website to help track student progress in MSC academic program.
- Handled multiple user profiles like Student, Instructor, Admin, Program Co-Ordinator, and QA Officer.
- Contains features like taking exams, report generation, student analysis, course analysis, communication between multiple user profiles, etc.
- Used HTML, CSS, JavaScript and ReactJS for frontend and NodeJS for chatbot.
- Used WordPress for Blogs section in the project.
- Used PHP for the backend development.
- Converted the entire project into Laravel.
- [Live Project](#) | [GitHub Link](#)

IPL Score Website| *ReactJS, HTML, CSS, JavaScript, Spring Boot (Backend still in Development)* *Jan 2025*

- Developed an IPL score website using **React JS**, delivering a responsive and dynamic user interface.
- Key features include real-time live match scores and player stats.
- Match Schedules for both upcoming and past games.
- Latest IPL news can also be fetched directly.
- Created a user-friendly platform with a scalable architecture to handle real-time data efficiently.
- Backend development is ongoing to support full data management and API functionality.
- Building with **Spring Boot** to manage REST API services for live match data, team and player statistics, and news updates.
- [Live Project](#) | [GitHub Link](#)

Interactive Web Application with Presidential Timeline| *ReactJS, Node.js, HTML, CSS, JavaScript* *Jan 2025*

- Built an interactive counter tracking Donald Trump's presidency term, featuring a timeline of key events that led to his presidency.
- Implemented state management using React's `useState` and `useEffect` hooks to dynamically update the timer, ensuring an accurate countdown that adjusts automatically according to the system's time zone.
- Displays the duration of Trump's presidency in real-time.
- Showcases major events that influenced his path to the presidency.
- Created a visually engaging and informative tool that tracks and highlights important historical events related to Trump's presidency.
- [Live Project](#) | [GitHub Link](#)

Insurance Cost Prediction using Regression Techniques | *Python, Jupyter Notebook*

Nov 2022

- Data Pre-processing and feature engineering, model selection and tuning, Feature importance analysis, cross-validation and prediction were done.
- Obtained ability to leverage data-driven insights to solve complex real-world problems.
- Applied multiple regression techniques such as Linear Regression, Decision Trees, and Random Forests to predict insurance costs, analyzing their performance through various evaluation metrics such as RMSE, R-squared, and Mean Absolute Error.
- [GitHub Link](#)

RESEARCH

Implementation Of Spot the Differences Game Using YOLO Algorithm | *Published in Springer*

Nov 2022

- Developed an implementation of Spot the Differences Game using YOLO Object Detection Algorithm.
- Implementation achieved an accuracy of 70 percent over all the object detection datasets.
- Research Paper published in the book series called "Proceedings of the International Conference on Cognitive and Intelligent Computing."
- Delivered a presentation of the research paper at a conference.
