EDUCATION

CASE WESTERN RESERVE UNIVERSITY

Cleveland, OH

Bachelor of Science in Computer Science

Concentration: Software Engineering | Minor: Business Management

PROFESSIONAL EXPERIENCE

Software Engineer @ Musing AI

Jan 2026 - Present

- Built a voice-driven product recommendation web prototype enabling users to search products via speech and receive personalized recommendations using user context data
- Integrated multimodal outputs (voice and images) to demonstrate differentiated recommendations across multiple user profiles
- Designed and implemented a multi-agent system using Google ADK, orchestrating conversational, memory/context, and matching agents via an AI Orchestrator
- Developed and deployed a web-based interface supporting multi-user interactions and end-to-end system functionality
- Collaborated on API integration and validation to ensure reliable agent communication and system workflows

DevOps Engineer @ Balanx Bio

Jan 2026 - Present

- Built and maintain CI/CD pipelines to support reliable and automated software deployments
- Gained hands-on experience with cloud platforms and infrastructure automation to support scalable environments
- Worked with Docker, Kubernetes, Terraform, and GitHub Actions to support containerization and deployment workflows
- Conducted API testing using Postman and JSON payloads to validate backend services and deployment workflows
- Troubleshoot deployment, performance, and cloud environment issues in collaboration with developers

Software Engineer Intern @ Fulton Bank

May 2025 - August 2025

- Shadowed IT Solutions Developers for system integration workflows, testing practices, and backend platform operations.
- Assisted in basic testing and API query validation using tools like Postman, Boomi, and Salesforce.
- Gained exposure to enterprise systems such as CashFlow Central, FP&A, and automation tools like UI Path.
- Attended Agile ceremonies including standups and sprint planning, learning how tasks are tracked and prioritized in a development cycle.

Software AI and Web Development Intern @ Mindhome

May 2024 - Aug 2024

- Implemented ROS2 for autonomous navigation and sensor integration.
- Designed intuitive robotic gestures to enhance human-robot interaction.
- Developed and optimized NLP-based conversational AI modules.
- Contributed to object recognition algorithms for real-time accuracy.

PROJECT EXPERIENCE

Software Engineering Project: Snack Overflow

Spring 2025

Case Western Reserve University | Backend Developer

- Designed and implemented REST APIs and PostgreSQL schema for inventory, authentication, and request handling
- Implemented concurrency control to ensure accurate real-time inventory updates under high traffic
- Optimized database queries and API performance for scalability
- Collaborated with frontend teams to integrate admin and employee dashboards.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL, C++, HTML

Tools & Frameworks: FastAPI, Node.js, PostgreSQL, Git, Docker, AWS, Postman, ROS2, PyTorch, RAG Pipelines, Pandas, NumPy, Scikit-learn

AI & Systems: LLM APIs, Agent-Based Frameworks, API Orchestration, Async Programming, Fine Tuning

Additional: Data Cleaning, Feature Engineering, Troubleshooting, technical communication, collaborative development
