WORK EXPERIENCE

LLM Engineer

Dec 2025 – Present

Apex Cybernetics

- Architected voice agent with streaming ASR/TTS achieving sub-second latency on ONNX runtime and **Azure Speech Services** with custom buffering for real-time conversations.
- Built AI tutoring robot with **Azure OpenAI** streaming integration, implementing **context engineering** and custom prompts for personalized learning.
- Implemented guardrails using **NeMo Guardrails** to prevent toxic inputs, outputs, PII leakage, and off-topic responses.

AI Engineer

Nov 2025 – Jan 2026

Infranergy

- Automated business workflows by building **AI agents** to retrieve and process enterprise contracts, reducing manual effort and improving process efficiency.
- Improved LLM reliability through structured output parsing, model routing and **prompt engineering** to optimize token costs and API latency.
- Built **RAG** pipeline with Docling parser and vector retrieval for multi-turn agents, reducing hallucinations by 10%.

Data Scientist

Aug 2024 – Oct 2025

Walker Lab, University at Buffalo

- Analyzed **clinical and genomic data** of breast cancer patients using clustering analysis, leading to the identification of **2** risk factors associated with metastatic behaviors.
- Built robust **data pipelines** using Python to perform EDA, accelerating pre-processing by **20%**, which enabled faster model development and quicker iterations.

Data Analyst

Jul 2021 – Aug 2023

Accenture

- Maintained 15+ automated ETL pipelines and **Power BI dashboards** to process and visualize client data, reducing manual reporting efforts by 10% and enabling real-time insights for leadership.
- Designed and optimized complex **SQL queries** with window functions, and stored procedures to automate database operations, improving data retrieval performance by 25% .
- Orchestrated data migration pipelines utilizing **SAP BW & LSMW** to migrate and create business objects, ensuring data integrity across enterprise systems.
- Partnered with cross-functional teams and leadership across 3 departments to design and implement data solutions aligned with business requirements, translating technical constraints into reliable data decisions.

PROJECTS

Align - AI Study Companion Agent | *Google ADK, Gemini 2.5 Flash, MCP, Langfuse*

Nov 2025

- Engineered an **AI agent** that autonomously orchestrates Canvas LMS, Google Calendar, and web search APIs to transform academic workloads into actionable study plans.
- Integrated **MCP** toolsets with tool filtering and timeout configurations, reducing token consumption by 40% and Langfuse observability to track token usage.

SKILLS

Programming: Python(numpy, pandas, matplotlib), R(dplyr, ggplot2), Javascript, Bash Scripting

Databases: MySQL, PostgreSQL, MongoDB, Snowflake

Tools: n8n, Jupyter Notebook, Notion, MS Excel, Pydantic

Deep Learning: PyTorch, TensorFlow, Keras, Scikit-learn, Huggingface Transformers

AI/ML Frameworks: LangChain, LangGraph, Google ADK

MLOps: Fast API, MLFlow, Airflow, Databricks, Git & GitHub, Docker, Kubernetes, AWS(S3, Lambda)

EDUCATION

University at Buffalo, SUNY

Jan 2025

Master of Science in Data Science

Coursework: Machine Learning, Deep Learning, Time Series Analysis, Inferential Statistics, Reinforcement Learning, Database Design & Management
