SKILLS

- Python
- R Scripting
- Structured Query Language (SQL)
- Microsoft Excel (pivot charts, power pivots, solver, visualizations, forecasting)
- Tableau
- Alteryx
- Microsoft Power BI
- Databasing and Data Management

EDUCATION

Master of Science in Applied Data Science

Syracuse University
January 2023 - June 2024

Bachelor of Arts in Biological Sciences

CUNY Hunter College
January 2020 - December 2022

Associate in Science in Biology

CUNY LaGuardia Community College
September 2017 - December 2019

WORK EXPERIENCE

Data Research Analyst Intern

May 2024 - October 2024

Cooledtured

Responsibilities:

- Assist with data collection, cleaning, and organization.
- Perform basic data analysis tasks and generate insightful reports.
- Create data visualizations to communicate findings effectively.
- Stay up-to-date on data analytics trends and best practices.
- Contribute to the development and improvement of data-driven processes.
- Data entry
- Carry out data analysis projects and produce data-driven decisions in an effort to boost the company's outreach.

Sales Assistant

(Seasonal/Summer)

July 2015 - August 2019

(also did a separate stint in summer 2023)

Stepping Ahead Ltd.

Responsibilities:

- Cashiering
- Opening and closing the store.
- Maintenance of Inventory on Point of Sale system.
- Assisting customers in selecting the right products. Making sure the store remained in a clean and presentable manner.

PROJECTS

Reddit Trending Topics Scraper

Cooledtured 07/12/2024 - 08/13/2024

- Python was used to create a tool that scrapes a given subreddit page for its "hot", "rising", "top", and "new" posts, returning things like title, upvote score, and comments for each of those posts.
- NLTK libraries were incorporated to tokenize the comments for each post and rank the words by frequency, producing visualizations like word clouds and bar charts by frequency. The code was used to program a discord bot to provide the content creation team with a user friendly, efficient way of finding out what topics are trending as well as give context as to why they are trending.

Pinterest Project

Cooledtured 08/14/2024 - 08/30/2024

- Python was used to study the dynamics of the company's Pinterest posts and determine what variables contribute the most to how well a pin does in order to give the UX team some guidance when it comes to what products should be the main display on the home screen.
- This project was carried out by first scraping the data using a tool as well as manual inputs to create the dataframe. This was followed by exploratory analysis using time series and bar graphs to get a landscape of the data, getting a general view of how certain brands and products reflecting certain genres and shows/movies/games/etc. has done in the past.
- For the main part of the project, a logistic regression was done to measure the probability of a pin getting clicked on based on multiple variables pertaining to each product, comparing its results to engagement rate numbers and a ranked feature importance table made possible using random forest classification.

Social Media Engagement

Cooledtured 06/06/2024 - 07/02/2024

- Python was used on a scraped dataframe to transform, carry out exploratory analysis, and produce several different visualizations to determine what topics bring in the most impressions and engagements

A more detailed look at these projects, including the others along with the accompanying code and presentations can be found in the portfolio

DALE DEANS

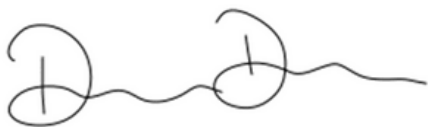

DEAR RECRUITMENT,

In response to your Data Analyst position opening, I am writing to express my interest in the role. With a Master's degree in Applied Data Science from Syracuse University and internship experience at Cooledtured, I am eager to contribute my analytical skills and background in machine learning to your team.

During my time with Syracuse, I became proficient with multiple programming languages such as R, SQL, and Python as well as honed advanced skills in Microsoft Excel, Weka and dashboarding tools like Tableau, Alteryx, Google Analytics, and Power BI. As an intern, I have applied these skills to carry out projects where behavioral data is analyzed with the goal to produce actionable insights that improve user outreach for the company. Throughout my time there I regularly used python and excel for dataframe management and manipulation as well as carrying out analysis, ranging from basic exploratory stuff to more advanced machine learning techniques, in order to produce takeaways regarding user outreach of their social media platforms that could in turn ultimately help bring in more costumer sales. This experience has allowed me to sharpen my skills when it comes to scraping and working with complex data in addition to communicating technical findings to the casual audience in a clear and cohesive manner.

I believe this opening is great opportunity for me to display my skills and contribute to the process of making data-driven decisions while also allowing me to further grow as a data scientist and learn from my colleagues. Thank you for considering my application and I look forward to discussing how my background and technical skills can benefit your team.

SINCERELY,

A handwritten signature in dark grey ink, consisting of stylized, overlapping loops and a trailing line.
