Professional Summary

- Around 4+ years of experience in various domains as a Data Engineer in building and deploying data-intensive projects for Data Acquisition, Data Visualization, and Data Mining with large datasets of Structured and Semi-structured data.
- Have 4 years of experience in Big Data, AWS (S3, EC2, RDS, EMR, Redshift), Azure cloud platform, Hadoop, Hive, Spark, Sqoop, SQL, PLSQL, and Teradata.
- Extensive Information Technology experience in all phases of the Software development life cycle including System Analysis, Design, Data Modeling, Dimensional Modeling, implementation and Support of various applications in OLTP and Data Warehousing.
- Experienced in Python to manipulate data for data loading and extraction and worked with Python libraries like Matplotlib, NumPy, Tweepy, Seaborn, Stats Models, and Pandas for data analysis.
- Passionate about extracting insightful information from massive data assets and developing trends to make data-driven decisions using Power BI.
- Have Extensive Experience in IT data analytics projects, Hands on experience in migrating on-premises ETLs to Google Cloud Platform (GCP) using cloud-native tools such as BIG query, Cloud Data Proc, Google Cloud Storage, Composer.
- Extensive work in ETL process consisting of data transformation, data sourcing, mapping, conversion, and loading.
- Hands-on experience in creating Data quality rules in Ataccama tool to validate data quality scenarios
- Extensive experience in Amazon Web Services (AWS) Cloud services such as EC2, VPC, S3, IAM, EBS, RDS, ELB, VPC, Route53, OpsWorks, DynamoDB, Autoscaling, CloudFront, CloudTrail, CloudWatch, CloudFormation, Elastic Beanstalk, AWS SNS, AWS SQS, AWS SES, AWS SWF & AWS Direct Connect.
- ETL process continuously bulk importing clinical data from SQL server and PostgreSQL Database into Elasticsearch and Spreadsheet.

Technical Skills

Databases	SQL, Hive, SAS, Teradata, MongoDB, Impala, Pig, Spark SQL, PostgreSQL, Databases SQL-Server, My SQL, MS Access, HDFS, HBase,
Languages	Python, Pandas R, SQL, PL/SQL, Spark SQL O MSBI (SSIS, SSAS, SSRS), Unix Shell Scripting.
Big Data Technologies	Hadoop, Hive, HDFS, ETL, MapReduce, Pig, Kafka, Spark, Talend Open Studio 7.3
Cloud technologies	Azure data bricks, GCP, Azure DevOps, Azure Data lake, AWS, <u>Azure Data Factory</u> Azure Data Lake, Data Factory, Azure SQL Datawarehouse, Azure SQL database, AWS services
Operating System	Windows, Linux, Unix.
Libraries	NumPy, Seaborn, Pandas, Matplotlib.
Web Technologies	Java Script, HTML, XML, HTTP
Methodologies	BDD (Behavior Driven Development), Test Driven Development (TDD).
Reporting Tools	MS Office (Word/Excel/PowerPoint/ Visio), MS Power BI, Tableau, Cognos.
Other Tools	Informatica Power Center, Erwin 8.1/7.3, Visio 2007, Informatica Power Center, Autosys, Azure Workload Scheduler, Jenkins, Subversion, Bitbucket, Git, IBM Rational ClearCase, Revision Control System, BMC Control-M, Atlassian Jira, Visual Studio IDE, Airflow, Maxterm.

Professional Experience

Baylor Scott & White, Waco, TX

July 2024 to Present

AWS Data Engineer

Responsibilities:

- Implemented Spark using Python, Data frames, and Spark SQL API for faster data processing. Importing and exporting data into HDFS and HIVE using Spark and Python.
- Played a lead role in gathering requirements, analysis of entire system and providing estimation on development, testing efforts.
- Involved in designing different components of system like Sqoop, Hadoop process involves map reduce & hive, Spark, FTP integration to down systems.
- Have written hive and spark queries using optimized ways like using window functions, customizing Hadoop shuffle & sort parameter
- Developed ETL using PySpark. Used both Dataframe API and Spark SQL API.
- Using Spark, performed various transformations and actions and the final result data is saved back to HDFS from there to target database Snowflake
- Migrated an existing on-premises application to AWS. Used AWS services like EC2 and S3 for small data sets processing and storage, Experienced in Maintaining the Hadoop cluster on AWS EMR
- Strong experience and knowledge of real time data analytics using Spark Streaming, Kafka and Flume
- Configured Spark streaming to get ongoing information from the Kafka and store the stream information to HDFS
- Design and Develop ETL Processes in AWS Glue to migrate Campaign data from external sources like S3, ORC/Parquet/Text Files into AWS Redshift
- Used various spark Transformations and Actions for cleansing the input data
- Used Jira for ticketing and tracking issues and Jenkins for continuous integration and continuous deployment. Enforced standards and best practices around data catalog, data governance efforts
- Data Modeler is a cloud-based data modeling solution that helps businesses design, visualize and deploy data assets in real time.

Southern California Edison, CL

June 2023 – June 2024

Data Engineer

- Responsible for maintaining quality reference data in source by performing operations such as cleaning, transformation and ensuring integrity in a relational environment by working closely with the stakeholders and solution architects.
- Designed and implemented cloud data design using the AWS tools. Built AWS data pipeline using DynamoDB, AWS Glue and Amazon Athena. Used AWS Glue to create batch pipelines and real time processing jobs.
- Used AWS EMR to transform and move large amounts of data into and out of other AWS data sources and databases such as Amazon Simple Storage Service(S3), Amazon DynamoDB.
- Extracted data using migration tools like AWS glue from Amazon RDS and loaded the data to Amazon S3 in JSON format. Used JSON schema to define table and column mapping from S3 data to Redshift and the integration format.
- Used AWS Lambda to process big data sets and perform complex analytics using various data processing frameworks such as Apache Spark and Apache Hadoop.
- Built ETL/ELT pipelines in Redshift using various tools such as AWS Glue, Talend, as well as programming languages like SQL and Python.
- Integrated Snowflake with other cloud-based platforms and services, such as AWS S3, Tableau, PowerBI, and other data visualization and analytics tools.
- As a part of Data Migration, Wrote SQL scripts for Mismatch of data and worked on loading the history data from MySQL or PostgreSQL to Snowflake.
- Designed, implemented, and optimized data warehouses in Snowflake using its unique multi-cluster shared data architecture and automatic scaling capabilities.

- Tested and deployed AWS Lambda functions using various tools such as AWS SAM, AWS Code Pipeline, or GitLab, as well as implementing continuous integration and continuous deployment (CI/CD) pipelines in Bamboo to automate build, test, and deployment processes. Managed Redshift clusters in a scalable and cost-effective manner.
- Achieved Continuous Integration and Continuous Deployment (CI/CD) process using GIT, Jenkins, Puppet and custom repositories.

Bosch Global Software Technologies, Bangalore, India

Jan 2021 to Dec 2022

Azure/ Data Engineer

Responsibilities:

- Actively involved in all the phases of the project life cycle including data acquisition, data cleaning, data engineering, and data analysis.
- Worked closely with business users and gathered requirements to develop, test and deploy Pyspark code.
- Extract Transform and Load data from sources Systems to Azure Data Storage services using a combination of Azure Data factory, T-SQL, Spark SQL, and U-SQL Azure Data Lake Analytics. Data ingestion to one or more Azure services (Azure Data Lake, Azure Storage, Azure SQL, Azure DW) and processing the data in Azure Databricks.
- Developed and maintained end-to-end operations of ETL data pipelines and worked with large data sets in Azure Data Factory.
- Extract Transform and Load data from Sources Systems to Azure Data Storage services using a combination of Azure Data Factory, T-SQL, Spark SQL, and U-SQL Azure Data Lake Analytics. Data Ingestion to one or more Azure Services - (Azure Data Lake, Azure Storage, Azure SQL, Azure DW) and processing the data in In Azure Databricks.
- Developed JSON Scripts for deploying the Pipeline in Azure Data Factory (ADF) that process the data using the SQL Activity.
- Hands-on experience in developing SQL Scripts for automation purposes.
- Created Build and Release for multiple projects (modules) in a production environment using Visual Studio Team Services
- Worked on Teradata SQL queries, Teradata Indexes, and Utilities such as Reload, Trump, Fast load, and Fast Export.
- Used Informatica Power Center to load data from Flat Files to DB2, XML files to DB2, Flat Files to Oracle.

Dell Technologies, Bangalore, India

July 2020– Dec 2020

Data Analyst

Responsibilities:

- Used Python and Tableau for data visualization and EDA to find patterns and correlations in data.
- Created dashboards, reports, and data stories in Tableau with various visualizations like pie charts, bar graphs, and tree maps.
- Presented data insights to stakeholders using interactive Tableau dashboards and reports.
- Managed data using IBM DB2, Oracle, MySQL, SQL Server, and Snowflake for storage, querying, and updates.
- Wrote SQL scripts for creating tables, views, indexes, and more; developed stored procedures, functions, triggers, and packages.
- Optimized SQL and PL/SQL code to enhance database performance and reduce response times.
- Transferred data between databases and Hadoop (HDFS, Hive) using Sqoop for analysis and reporting.
- Designed and implemented ETL processes for large datasets using bulk data handling techniques.
- Experienced with Agile (Scrum) and Waterfall methodologies, familiar with designing use cases and UML diagrams.

Education:

Masters in BA, Texas A&M University Commerce

Bachelor's degree in computer science, Vellore Institute of Technology University

Certifications:

Machine Learning with Python- issued by IBM

Solution Architect Associate- Issued by AWS
