

Gowtham reddy Sathi

315-617-1177 | de.gowtham03@gmail.com |

Professional summary:

- **5+ years of experience** in Data Engineering, Big Data Technologies, Cloud Computing, and ETL development.
- Proficient in designing and implementing **scalable data pipelines** using Python, Spark, and SQL to process large datasets efficiently.
- Expertise in **cloud platforms** including AWS, Google Cloud Platform (GCP), and Azure, working with services like Dataproc, BigQuery, EMR, and Redshift.
- Strong background in **Big Data technologies**, including Hadoop, Spark, Hive, Kafka, and Oozie, optimizing data processing and analytics workflows.
- Skilled in **ETL development and data integration**, leveraging tools like Informatica, Apache Airflow, and custom-built Python/SQL-based workflows.
- Experience in **data migration and transformation**, handling structured and unstructured data across various databases like MySQL, PostgreSQL, Oracle, MongoDB, and Cassandra.
- Strong knowledge of **data security and compliance**, implementing encryption techniques, access control mechanisms, and governance best practices.
- Expertise in **business intelligence and data visualization**, creating interactive dashboards using Tableau, Power BI, and Splunk for real-time analytics.
- Adept at **collaborating with cross-functional teams**, including developers, data scientists, and business stakeholders, to translate requirements into technical solutions.
- Passionate about **optimizing system performance and troubleshooting**, ensuring high availability and efficiency of data pipelines and applications.
- Experience in **DevOps practices**, working with CI/CD pipelines, version control (Git, SVN), and automation tools to streamline deployment processes.
- Strong understanding of **distributed computing and parallel processing**, leveraging Spark and Kubernetes for efficient workload management.
- Proven ability to **develop machine learning models** and analytical solutions to drive data-driven decision-making for businesses.
- Hands-on experience in **real-time data streaming** using Apache Kafka and Spark Streaming for low-latency analytics and event-driven architectures.
- Proficient in writing **technical documentation**, creating internal knowledge bases, and developing best practices for data engineering teams.
- Enthusiastic about **learning and implementing emerging technologies**, ensuring continuous innovation and improvement in data solutions.
- Hands-on experience with cloud data warehouses like **Snowflake for scalable data storage and analytics**, and **SSIS for designing and managing SQL Server-based ETL workflows**.

Technical skills:

Operating Systems	Linux Red Hat (4.x, 5.x, 6.x), Linux CentOS, Ubuntu, Unix, Windows [...] AIX.
Hadoop/Bigdata Technologies	Hadoop, Map Reduce, Hive, Oozie, Spark, Zookeeper and Cloudera Manager, Kafka, Flume.
ETL Tools	Informatica, Teradata, SSIS
Databases	Oracle, MY SQL, PostGres , Snowflake
NO SQL Database	MongoDB, Cassandra, HBase, Google Cloud Spanner, Amazon DynamoDB.
Monitoring & Reporting	Tableau, Power BI, Splunk, ELK stack
Hadoop Distribution	Horton Works, Cloudera, Map-R
Build Tools	Maven, SBT, Gradle
Programming & Scripting	Python (NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn) , Scala, SQL, Shell Scripting, C, C++
Version Control	SVN, GIT, Stash

Work Experience:

TransUnion, Dallas, TX
Senior Data Engineer

Oct 2023 – Present

Responsibilities:

- Collaborated with **Application, Development, and Quality Engineers** to identify and resolve critical performance issues with our offerings and guide Cloud and Hybrid solutions.
- Collaborated with internal teams (**Data Science, Analytics, and Reporting**) utilizing our data to define business requirements and design data solutions to address their needs.
- Collaborated with global teams, providing feedback and thoughts for new cloud implementations.
- Worked with technical and non-technical staff to translate business requirements into technical requirements.
- Participated in design and code reviews with other developers, providing and receiving feedback.
- Provided end-to-end data solutions to the business and analytics team, ensuring end-to-end encryption by leveraging **Azure** and native **Python**.
- Implemented Slack notifications to provide daily status and updates on the load process for better data monitoring.
- Designed and authored mechanisms to work with **GPG** encrypted files in a cloud serverless environment.
- Utilized **Snowflake** for cloud-based data warehousing, designing SQL queries, optimizing performance, and supporting analytics teams in structured reporting.
- Engineered data pipelines using internal **ETL tools**, native **Python scripts** with **Spark SQL** and **PySpark**, ensuring data encryption at rest and in transit.

- Created data pipelines using **Databricks** and implemented auditing.
- Created a broadcast snapshot email pipeline to provide tabular information about all jobs loading in production for management monitoring purposes.
- Authored and documented multiple internal wiki pages with specifications for the technical architecture and **SOPs** to be followed during job monitoring and manual execution.
- Developed and deployed **SSIS** packages to support integration between on-prem SQL Server and Azure cloud environments.

Cloud flare -Austin, TX
GCP Data Engineer

Sep 2022 – Oct 2023

Responsibilities:

- Worked extensively with the **GCP cloud platform**, gaining hands-on experience with **Dataproc, BigQuery, Cloud Storage, Dataflow, Cloud SQL, and Datastore**.
- Designed and deployed data pipelines using **Cloud Storage, Dataproc, and Cloud Composer**.
- Utilized **Google Cloud Dataflow** to integrate data from both on-prem (**MySQL, Cassandra**) and cloud (**Cloud Storage, Cloud SQL**) sources, applying transformations for loading into **Google BigQuery**.
- Configured **Spark Streaming** to receive real-time data and store the streaming data to **Google Cloud Bigtable**.
- Designed and developed data models using **DBT** to create structured datasets, improving data accessibility and accuracy for analytics and reporting.
- Demonstrated proficiency in **Java programming language**, used for developing and maintaining **data integration workflows, ETL pipelines, and custom Spark functions for mining data** and providing real-time insights.
- Utilized **Java** in conjunction with **Apache Spark** to handle data processing tasks, such as **data cleansing, transformation, and analysis**.
- Developed custom-built input adapters using **Java** and **Hive** for data ingestion and analysis.
- Leveraged Java's robust ecosystem and libraries to optimize code performance and enhance overall data processing efficiency.
- Utilized **Cloud Storage** for storing and performing various processing and analytics tasks.
- Ingested data into **Google Cloud Storage** and processed it using **Dataproc**.
- Managed resources and scheduling across the cluster using **Google Kubernetes Engine (GKE)**.
- Integrated **Snowflake** as part of **the cloud data pipeline using DBT** and custom SQL transformations for structured data modeling.
- Successfully implemented **DBT (Data Build Tool)** to transform and model raw data into valuable insights.
- Implemented **Delphix solutions** to create virtual copies of production databases, enabling efficient and secure data provisioning for development, testing, and QA teams.
- Utilized **Informatica PowerCenter** to design, develop, and deploy data integration workflows.
- Used **SSIS to extract** and load data from legacy SQL Server systems into GCP environments as part of migration projects.

Electronic arts games India private limited Hyderabad, India
Data Engineer

Aug 2020 to Aug 2022

Responsibilities:

- Extensive experience in data migration, including on-premises data migration from **HDFS** to **Amazon S3 Cloud buckets** and **RDBMS** data migration to **Amazon RDS** and **Amazon Aurora**.
- Developed ETL scripts for data transformation and loading into **Amazon Redshift** and **Amazon Athena**.
- Implemented scalable ad hoc data processing clusters using **Amazon EMR** to improve application performance.
- Created and managed server groups and static servers for production environments in **Amazon EMR**.
- Leveraged PySpark applications on **Amazon EMR clusters** for efficient data processing.
- Utilized Apache Airflow for automating on-premises and **AWS operations** through **DAGs**.
- Proficient in data visualization using **Tableau**, including Maps, Density Maps, Tree Maps, Heat Maps, Pareto charts, Bubble charts, Bullet Charts, Pie Charts, Bar charts, and Line charts.
- Implemented sorting, filtering, and various Tableau features to analyze data effectively.
- Applied **Lambda functions** with **pandas Data Frames** for data manipulation and analysis.
- Experienced in using Django for web application development, including **Django views**, **Django REST framework**, and **integration of API endpoints**.
- Conducted unit testing using **PyUnit** for application validation.
- Employed **AWS APIs** for data analysis and visualization, generating reports with **Excel** and **Tableau**.
- Utilized **Highcharts** to create interactive **JavaScript charts** for web applications.
- Proficient in version control using **AWS CodeCommit** or Git for collaboration within the team.

Infosys Ltd, Hyderabad, India
Data Analyst

Sep 2019 to Aug 2020

Responsibilities:

- Analyzed Claims data and Member level data to calculate monthly customer penetration for Anthem Group provider network and created real-time **TABLEAU dashboards** based on SQL stored procedure
- Analyzed previous year's Marketing campaigns for both Acquisition, Retention and incorporated the results in designing the future campaigns to optimize conversion rate for acquisition and renewal rate regarding customer retention.
- Used Sqoop to extract data from **Oracle SQL server** and **MySQL databases** to HDFS.
- Developed workflows in Oozie for business requirements to extract the data using **Sqoop**.

- Developed **MapReduce (YARN)** jobs for cleaning, accessing and validating the data.
- Wrote MapReduce jobs using Pig Latin, Optimized the existing **Hive** and **Pig Scripts**.
- Used **Hive** and **Impala** to query the data in **HBase**.
- Hive scripts were written in **Hive QL** to de-normalize and aggregate the data.
- Index documents in **HDFS** using **Solr Hadoop connectors**.
- Created market opportunity assessment by identifying key drivers influencing the patient journey using various Statistical analysis methods such as Regression and tree-based models. Devised personalized marketing strategy by developing member segmentation for 40 million patients utilizing Express script **Pharmacy**.
- Collected medical and pharmacy claim data and did exploratory data analysis along with data wrangling and ran machine learning models like Logistic and Decision trees and with the results, we are able to provide insights that could effectively reduce churn rate by 12%.
- Built interactive weekly Tableau dashboards and demonstrated to Client to keep track of **KPI's** like revenue generated from various geographic locations, products & services and supported data-driven decision making.
