SUMMARY

Data Scientist and Analytics Engineer with 2+ years of experience building Python and SQL data pipelines, data models, dashboards, and forecasting solutions that support operational and strategic decision-making. Skilled in AWS, PostgreSQL, Power BI, Tableau, Pandas, NumPy, PySpark, and scikit-learn, with a record of improving data quality, automating reporting, and translating complex analyses into clear recommendations for business stakeholders.

EDUCATION

M.S. Data Science - Stony Brook University (SUNY) GPA: 3.91/4.0 Department of Applied Mathematics and Statistics, Stony Brook, NY	Aug 2024 - May 2026
B.Tech. Computer Science - Guru Gobind Singh Indraprastha University GPA: 3.64/4.0 Delhi, India	Jul 2019 - May 2023

WORK EXPERIENCE

Data Analyst Co-op <i>Derivative Path Inc., New York, NY</i>	May 2025 - May 2026
--	---------------------

- Designed and launched a Power BI Loan Spread Dashboard monitoring spreads, volumes, and revenues across 100+ counterparties, reducing reporting time by 30% and providing trading and risk leaders with real-time KPI visibility.
- Built Python and PostgreSQL ETL and data-modeling workflows across 50,000+ trade records, creating reusable views, tables, and validated datasets for business intelligence and downstream analysis.
- Automated data-quality checks and anomaly detection across live trade feeds, reducing manual preparation by 25%, eliminating recurring reporting errors, and improving the reliability and accessibility of analytics outputs.
- Analyzed asset-tier, regional revenue, and SOFR adoption trends; presented findings in 5+ leadership sessions and translated results into actionable recommendations for trading, sales, risk, and finance stakeholders.

Research Assistant - NLP & Clinical ML <i>Stony Brook University, Stony Brook, NY</i>	Sep 2025 - Dec 2025
---	---------------------

- Built and maintained Python data pipelines to extract, clean, and transform 10,000+ de-identified EHR records, improving consistency across model training, evaluation, and reproducible research workflows.
- Performed exploratory and statistical analysis with Pandas, NumPy, and Matplotlib to identify patterns in patient demographics, diagnosis frequency, and readmission outcomes that informed feature engineering.
- Developed performance-tracking dashboards for F1, AUC, precision, and recall across 6+ model architectures, enabling systematic comparison, monitoring, and data-driven model selection.
- Collaborated with faculty and research staff to define data requirements, document transformation logic, and present analytical findings in weekly reviews to technical and nontechnical stakeholders.

Data Analyst <i>Web Solutions India, Delhi, India</i>	Jul 2023 - Jul 2024
---	---------------------

- Designed Python and SQL ETL pipelines processing 100,000+ records daily, improving data accuracy by 35% through automated validation, deduplication, anomaly detection, and schema optimization.
- Built churn and sales forecasting models using Logistic Regression, Random Forest, and XGBoost, achieving 82% accuracy and helping teams identify at-risk customers 2 to 3 weeks before predicted churn.
- Automated monthly KPI reporting with Python, SQL, and Excel, reducing manual effort by 40%; developed Tableau dashboards consolidating 5+ source systems for operational and business analytics.
- Improved core reporting-query performance by approximately 30% and presented customer behavior, revenue-driver, and forecast insights to stakeholders, supporting quarterly sales planning.

PROJECTS

Global CO2 Emissions and Economic Growth Analysis	Aug 2024 - Dec 2024
Processed 5,800+ country-year records in R and built regression, K-Means, PCA, and ARIMAX forecasting models; achieved $R^2=0.69$ and $MAPE \approx 0.23\%$ while identifying structural breaks and regional emission-income disparities.	

Income Prediction using Machine Learning	Aug 2024 - Dec 2024
Built an end-to-end classification workflow on 26,000+ census records with feature engineering, SMOTE, and stratified cross-validation; XGBoost achieved 87.07% accuracy and informed feature-importance analysis.	

RAG-based Finance QnA System with LLM Fine-Tuning	Feb 2025 - May 2025
Built and evaluated a hybrid RAG workflow using LangChain, BM25, FAISS, semantic retrieval, and cross-encoder reranking; improved ROUGE-L/F1 by 116.4% and reduced inference latency from 1.8s to 0.9s.	

SKILLS

Programming & Analytics: Python, SQL, R, Pandas, NumPy, Scikit-Learn, PySpark, Statistical Analysis, Forecasting, EDA
Data Engineering & Cloud: PostgreSQL, ETL/ELT, Data Modeling, Schema Design, Data Quality, AWS (S3, EC2, Lambda), Azure, Docker, Git, Linux
Business Intelligence: Power BI, Tableau, Bold BI, Excel, KPI Reporting, Dashboard Development, Data Visualization, Business Analytics
Machine Learning & Collaboration: XGBoost, PyTorch, TensorFlow, Hugging Face, RAG, LLMs, Jira, Confluence, Agile, Cross-Functional Communication
