Professional Summary

- Agile Full Stack Software Developer with 6 years of IT experience in all phases of the Software Development Life Cycle (**SDLC**), including Analysis, Design, Implementation, Testing, and Development of web-based and enterprise client/server applications using Java/J2EE.
- Experience with various methodologies, including the **Waterfall** model, Incremental and Iterative model, and **Agile** methodologies such as Scrum and pair programming.
- Developed and deployed Microservices based applications using **Spring Boot**, Spring Cloud and consumed services using Spring Rest Templates.
- Experience in developing **SOA**(Service Oriented Architecture) and **J2EE** Web Services using SOAP and **REST**
- Experience in implementing **RESTful** web services using frameworks like Jersey, and Spring REST.
- Experience in **ORM** frameworks like JPA interface and its implementations like Hibernate, Spring Data JPA.
- Great exposure to Relational Databases like **MySQL**, **Oracle** and **SQL** Server.
- Extensive experience in designing and developing professional UIs using front-end technologies such as **HTML5**, **CSS3**, **XML**, and Bootstrap.
- Hands-on experience with front-end programming languages including **JavaScript**, **jQuery**, and **TypeScript**.
- Experience with Angular features such as components, directives, data and event binding, services, Observables (**RxJS**), dependency injection, NgModules, pipes, and routing.
- Expertise in implementing Java concepts such as OOP, Exception Handling, Multithreading, Collections, Generics, and Core Java SE 8 features like Stream API, functional interfaces, and Lambda Expressions.
- Experience in Query Optimization and good experience in writing SQL Queries, **PL/SQL-Stored procedures**, Functions, Triggers, Indexes and Views.
- Experience in providing robust security for the applications using Spring Security Framework and worked with **JWT** (Json Web Token) token-based authentication and involved Oauth 2.0 Configuration for Authentication and Authorization.
- Expertise in using version control tools like Git, GitLab and Jenkins for Continuous integration and Continuous development (**CI/CD**), dockers for containerization.
- Expert in unit testing with libraries like **JUnit**, **Mockito** and Integration testing tools

Technical Skills

Languages	Java, Python, C, JavaScript, TypeScript, Shell Scripting.
Web technologies	HTML, CSS, Angular, ReactJs, Javascript
Frameworks	RESTful API, OAuth, Microservices, Hibernate, Spring Boot
Operating Systems	Unix, Linux, Windows.
Databases	AWS DynamoDb, DB2, MySQL, NoSQL, MongoDB, Graph Database
Version Control	Git, GitHub, GitLab, SVN

Tools	Maven, Gradle, Docker, Containers, Jenkins, Kubernetes.
Methodologies	Agile/Scrum methodology, Waterfall.
Cloud Services	AWS EC2, EKS, SNS, SQS, S3, Lambda, Cloudformation and all other major AWS services
Infrastructure Management	Distributed Systems, High Scalability, High Availability, Auto-scaling, Fault Tolerance

Work Experience : 6 Years

Software Engineer | Fidelity Investments, Durham, NC, USA | January 2023 - Present

- Worked on Fidelity Trading Platform for account holders and trading advisers who can make orders across different lines of businesses with strong spring boot backend microservices systems with clean angular UI.
- Involves in sprint planning, design and daily stand up calls as the project strictly follows agile methodologies.
- Worked with HTML, CSS, Java Script and Angular for Implementing components, custom directives, decorators, and services, http module to interact with backend services.
- Worked with Java 8 to implement core business logic which includes object-oriented design, Multi- Threading, Collections, Lambda, Streams, Date Time API and Design Patterns
- Worked on Spring Boot applications to implement RESTful services and integrate with front-end clients, utilize great spring boot benefits of embedded tomcat, actuator and dev tools .
- Used JUnit and Mockito frameworks for backend unit tests, Jasmine and karma for front end unit tests and integration tests. Perform manual tests on Rest API using postman.
- Worked on Distributed micro service architectures using spring boot and implemented design patterns like Global Configuration, Registration, Global logging and Monitoring, Fall back and Resilient Patterns using spring cloud, and JMS, MQ and kafka for event driven calls.
- Worked on optimized SQL Queries on SQL server databases with help of tools like squirrel.
- Utilized CI/CD pipeline with tools such as Git for version control, Jenkins for build automation, Docker for containerization, Kubernetes for orchestration and AWS cloud to deploy the services.

Environment: Java 8, Spring, Spring Boot, Spring Data JPA, Hibernate, DB2, Tomcat, Microservices, Maven, Jenkins, Docker, Kubernetes , AWS, Spring Cloud, JUnit, Mockito, Log4j, Lombok, Gson, Git, HTML, CSS, Angular 18, NPM, Node.js, Karma, Jasmin, Postman, SQL Server.

Full Stack Java Developer | Wells Fargo, Dallas, TX, USA | February 2021 - January 2023

- Designed and implemented scalable backend RESTful services using Java and Spring Boot, ensuring efficient handling of high volumes of data and seamless integration with front-end applications.
- Full Stack Developer in the mortgage services department, creating an application for customers to manage their mortgage accounts.

- Used ReactJS for front-end development, SpringBoot microservices for back-end and Unix as operating system.
- Part of on-call rotation to ensure continuous system availability and reliability.
- Proficient in using object-relational mapping frameworks such as Spring JPA and Hibernate
- Implements CI/CD pipelines utilizing tools such as Git for version control, Jenkins for builds, Docker for containerization, and various other DevOps technologies.

Environment: ReactJS, Java 8, Spring, Spring Boot, Spring Data JPA, Hibernate, DB2, Tomcat, WebLogic, Microservices, Maven, Jenkins, Dockers, Cloud Technologies, JUnit, Mockito, Log4j, Lombok, Gson, Jackson, Maven, Git, Jenkins, Karma, HTML, CSS, NPM, Node.

Software Engineer | Genpact, Hyderabad, India | July 2016 - January 2018

- Worked as a DevOps Engineer for a team that involves multiple development teams and multiple simultaneous software deployments.
- Excellent interpersonal skills, ability to collaborate with developers to design and develop CICD pipelines using Jenkins, Maven, Nexus, Ansible, AWS Cloud formation and Terraform.
- Used Terraform to create Dev, Staging, and Prod Environments from scratch and deploy infrastructure to these environments. Used Auto scaling launch configuration templates for launching amazon AWS EC2 instances while deploying microservices.
- Implemented Terraform modules for deployment of various applications across multiple cloud providers and managing infrastructure. Built Jenkins jobs to create AWS infrastructure from GitHub repos containing Terraform code.
- Containerized our application by writing a Dockerfile and setup the automated build on Jenkins to publish the docker images to DockerHub & AWS ECR and then setup continuous deployment to deploy the docker images to ECS cluster.
- Automated Container Instance Draining in AmazonECS using AWSLambda, ASGlifecyclehooks, SNS.
- Created AWS Cloudwatch alarms and dashboards for production applications to monitor critical metrics like Availability, Latencies, API failures/errors and scalability. Also created ASG auto scaling rules to maintain buffer capacity for AZ failures scenarios.
- Implemented AWS Lambda functions to run automation in response to events in AWS DynamoDB table or S3 bucket or to HTTP requests using AWS APIGateway.
- Automated daily manual tasks by running cron jobs using BASH Scripts that report about versatile issues on Linux-based servers.

Environment: AWS, CI/CD, Python, Java, AWS Lambda, AWS SNS, EC2, Autoscaling, Unix, Linux, Web Servers.

Education

B.Tech in Electronics and Communication

JNTU Hyderabad, India

Graduated: June 2016
