PROFESSIONAL SUMMARY

MS in Information Technology (Cloud Engineering, ASU, 3.9 GPA) with 1.5 years of enterprise software engineering experience and a portfolio of production-grade AWS systems spanning agentic AI, GraphRAG, and serverless automation. Proven across the full cloud stack — Bedrock, SageMaker, Lambda, S3, CloudFront, IAM, Terraform, Docker, FastAPI, and GitHub Actions CI/CD — with real delivery impact: 30% finance-ops cost reduction, 50% faster reimbursements, and 25% fewer security vulnerabilities at enterprise scale. Actively pursuing AWS SAA-C03 and HashiCorp Terraform Associate to formalize hands-on IaC depth. Ready to bring cloud-native engineering rigor, AI integration experience, and a builder's mindset to a high-growth engineering team.

SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL, Bash, C/C++, Swift, SuiteScript

AWS Cloud: SageMaker, Bedrock (Claude 3 Haiku), Bedrock Agents SDK, Lambda, S3, CloudFront, EC2, VPC, IAM, CloudFormation, CloudTrail, GuardDuty, Network Firewall, RDS, SNS, VPC Flow Logs, Systems Manager

IaC & Configuration: Terraform, CloudFormation, Ansible Playbooks

CI/CD & DevOps: GitHub Actions, Jenkins, Azure DevOps, GitLab CI, Docker, docker-compose, Linux/Unix, Git, GitHub, Heroku, Railway

Monitoring & Observability: Prometheus, Grafana

AI/ML & Backend: AWS SageMaker, AWS Bedrock, FastAPI, Flask, REST APIs, Pydantic, SQLAlchemy, Groq, Sentence-Transformer Embeddings, GraphRAG, Prompt Engineering, Gradient Boosting, Model Inference Endpoints

Databases: PostgreSQL, DynamoDB, MySQL, SQLite, Neo4j AuraDB (Graph, Cypher), Qdrant Cloud (Vector DB)

Frontend & Visualization: React.js, Vite, HTML, CSS, Jinja2, Streamlit, Chart.js, Bokeh, Tableau, Power BI

Other Cloud & Tools: Google Cloud Platform, NetSuite ERP (RESTlets, SDF), Concur, ADP, Jira, Agile / Waterfall, GitHub Pages

EXPERIENCE

Xperi Inc.

January 2023 – August 2024

Associate Software Engineer

- Re-architected enterprise finance operations across the Concur, NetSuite, and ADP cloud SaaS stack, slashing operating costs by 30% and shrinking employee reimbursement turnaround by 50% through workflow automation and ERP-side validation logic.
- Engineered SuiteScript (JavaScript) automations, RESTlets, scheduled scripts, and saved searches inside the NetSuite cloud ERP runtime, eliminating manual reconciliation and accelerating month-end close cycles for the global finance team.
- Built JSON / REST integrations between NetSuite, Concur, and ADP cloud services with token-based authentication, retry-with-backoff handlers, and idempotent sync logic to keep enterprise master data consistent across the SaaS landscape.
- Provisioned and managed NetSuite sandbox-to-production cloud environments using SuiteCloud Development Framework (SDF) for source-controlled code packaging, change tracking, and rollback-safe release pipelines.
- Hardened fraud controls with role-based access permissions, approval matrices, and segregation-of-duties rules across the cloud platforms, partnering with American Express integration owners and internal audit to enforce SOX-aligned validation and reconciliation, cutting audit-flagged vulnerabilities by 25%.
- Resolved 100+ Jira tickets spanning ERP defects, integration breaks, and access-control requests, raising internal-tool reliability and reducing repeat-issue volume across business stakeholders, while driving sprint cycles via mixed Agile and Waterfall delivery.

PROJECTS

CloudMind – Production Agentic AWS Security Assistant

2025

AWS Bedrock, Claude 3 Haiku, Bedrock Agents SDK, FastAPI, React, Vite, Docker, AWS Systems Manager

- Production agentic AI security assistant that answers real-time AWS posture, IAM, and best-practice questions using a Bedrock-hosted Claude 3 Haiku model orchestrated through an iterative tool-use loop with grounded prompt scaffolding and conversation memory.
- Built an async FastAPI backend wired to the AWS Bedrock Agents SDK with Pydantic-validated request/response schemas, structured system prompts, streaming token delivery, and per-session conversation state for multi-turn agentic dialogue.
- Engineered a React + Vite frontend with 10 quick-action security prompts, animated chat UI, syntax-highlighted AWS CLI snippets, and Server-Sent Events streaming for sub-second perceived latency on every model response.
- Migrated the inference layer from the direct Anthropic API to AWS Bedrock to consolidate IAM auth, billing, and VPC-side network controls under a single AWS account, then containerized the stack with Docker and externalized secrets via AWS Systems Manager Parameter Store for reproducible deploys.

ClaimPath Rx – Drug-Benefit Intelligence Platform (GraphRAG)

2025

FastAPI, Neo4j AuraDB, Qdrant Cloud, Groq, Pydantic, Sentence-Transformer Embeddings, Railway, GitHub Pages

- Hackathon-built drug-benefit intelligence platform (ASU Innovation Hacks 2.0) that maps prior-authorization rules, step-therapy paths, and payer coverage policies into a hybrid graph-and-vector retrieval layer for clinical decision support.
- Modeled payer-drug-policy relationships in Neo4j AuraDB with Cypher-driven traversal queries and indexed unstructured policy text in Qdrant Cloud using sentence-transformer embeddings for semantic top-k retrieval.
- Engineered an async FastAPI service with Pydantic schema validation, Neo4j Bolt driver pooling, and a GraphRAG fusion layer that re-ranks graph hits with vector similarity before invoking Groq's high-throughput inference API with citation-grounded, JSON-mode prompts.
- Deployed the FastAPI backend on Railway with environment-scoped secrets and the static frontend on GitHub Pages, configuring CORS, health checks, log streaming, and one-click rebuilds for a fully cloud-hosted demo stack.

CloudHire – H-1B-Aware Cloud-Job Aggregation Platform

2025

Flask, Python, SQLAlchemy, Jinja2, Docker, docker-compose, REST APIs, APScheduler, DOL/USCIS data

- Flask-based job-aggregation platform purpose-built for entry-level cloud roles (0–3 years of experience), pulling postings from Himalayas, Arbeitnow, and Remotive APIs into a unified, deduplicated, filterable feed.
- Designed a 0–100 H-1B sponsorship confidence score by joining DOL LCA disclosure data, the USCIS Employer Data Hub, and E-Verify status, surfacing employers most likely to sponsor recent grads and OPT candidates.
- Architected the Flask backend with SQLAlchemy ORM persistence, Jinja2 templating, Blueprint-based modular routing, and RESTful endpoints powering aggregation, scoring, filtering, and recruiter-facing outreach pipelines.
- Automated recruiter outreach via templated email pipelines and APScheduler-driven aggregation jobs, then containerized the stack with Docker and docker-compose for portable dev / staging / prod parity with externalized .env configuration.

EDUCATION

Arizona State University

August 2024 – May 2026

Master of Science in Information Technology – Cloud Engineering Specialization

GPA: 3.90/4.00

Relevant Coursework: Cloud Computing, Cloud Architecture, Information Security, Database Management, Software Engineering, Data Engineering, AI / Machine Learning, Project Management.

CERTIFICATIONS

- | | |
|---|---------------------------|
| – AWS Solutions Architect – Associate (SAA-C03) – Amazon Web Services | <i>Expected June 2026</i> |
| – HashiCorp Certified: Terraform Associate (003) – HashiCorp | <i>Expected June 2026</i> |
| – AWS Certified Cloud Practitioner (CLF-C02) – Amazon Web Services | <i>Completed</i> |
| – Microsoft Certified: Azure Data Fundamentals (DP-900) – Microsoft | <i>Completed</i> |
