PROFESSIONAL SUMMARY

Analytical and detail-oriented Data Analyst with an M.S. in Information Management from California Baptist University and a strong foundation in translating complex datasets into actionable business insights. Hands-on experience in statistical analysis, data modeling, and visualization, with a proven track record of maintaining high data integrity across large-scale structured and unstructured datasets. Adept at partnering with cross-functional teams to define key metrics, automate reporting workflows, and deliver data-driven recommendations that power strategic decision-making and model development. Highly proficient in Python, SQL, and Power BI, with a commitment to building robust data foundations that improve organizational efficiency and accuracy.

WORK EXPERIENCE

Qualitest, Kirkland, WA | Oct 2025 - Present

Data Analyst

- Analyzed and interpreted large-scale datasets from disparate sources to identify trends and patterns, providing actionable insights for QA and machine learning initiatives.
- Developed and executed data validation protocols to ensure 100% accuracy and consistency, mitigating risks of data bias prior to downstream model training and statistical analysis.
- Partnered with cross-functional stakeholders to translate business requirements into technical data specifications, overseeing the end-to-end data lifecycle from collection to reporting.
- Automated data extraction and transformation (ETL) workflows using Python and SQL, resulting in increased efficiency and a significant reduction in manual data processing time.
- Synthesized complex data findings into structured documentation and reports, ensuring data pipelines remained transparent and reproducible for engineering teams.

Environment: Python (Pandas, NumPy), SQL, Excel, Power BI/Tableau, Jupyter Notebooks

California Baptist University, Riverside, CA | Sep 2024 - Jul 2025

Graduate Research Assistant

- Designed and deployed end-to-end ML pipelines (Logistic Regression, RF, SVM) for hypothesis evaluation, reducing manual analysis time by an estimated 40% through automated feature engineering and model evaluation workflows.
- Wrote complex SQL queries across multi-table relational schemas - including multi-level joins, window functions, and aggregations - to extract, validate, and reconcile research datasets, ensuring >98% data integrity across deliverables.
- Engineered features from raw structured and semi-structured data, including normalization, categorical encoding, missing-value imputation, and PCA-based dimensionality reduction, improving model AUC scores by up to 12%.
- Built interactive Power BI dashboards and reproducible Jupyter notebooks to communicate KPIs, hypothesis testing results, and statistical validations to faculty and non-technical stakeholders, accelerating research decision cycles.

Environment: Python, SQL, R, Scikit-learn, Power BI, Jupyter, Git

SKILLS & TECHNOLOGIES

Programming: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL (Advanced Joins, Window Functions, CTEs, Query Optimization), R (Statistical Modeling)

Machine Learning & Statistics: Logistic Regression, Random Forest, SVM, Cox Proportional Hazards, Survival Analysis, EDA, Hypothesis Testing, A/B Testing, Feature Engineering, Cross-Validation, ROC-AUC, Precision-Recall

Cloud & Data Platforms: Google Cloud Platform (BigQuery, Dataflow, Cloud Storage), Snowflake, Databricks, Data Warehousing, Data Lakes

Data Engineering: ETL/ELT Pipelines, Star Schema & Dimensional Modeling, Data Quality Checks, Workflow Automation

Visualization & Reporting: Power BI (DAX), Tableau, Looker, Executive Dashboards, KPI Reporting

Tools: Jupyter Notebook, Git, GitHub, CI/CD Fundamentals, Agile/Scrum

EDUCATION

California Baptist University, Riverside, CA | Aug 2025

M.S. in Information Management
