

SUMMARY

AI Engineer- Agentic Systems & Enterprise Data | M.S. Management Information Systems, Texas A&M | Available Immediately.

- Shipped **3 production-grade agentic AI systems**: LangGraph multi-agent orchestration, freshness-aware RAG, and LLM evaluation.
- Surfaced potential \$500K–\$1.5M in revenue-risk exposure from a 58M-record supply-chain RAG pipeline at 85–90% claim-grounding.
- Deployed an AI agent to production for 100+ live users, cutting task time ~95% via AWS Bedrock (Claude)

PROJECTS

SupplySage AI: Agentic Retail Supply Chain Risk Platform | *Databricks, PySpark, ChromaDB, MLflow* ([Link](#))

Jun 2026

- Enabled proactive supplier-risk intervention projecting **\$500K–\$1.5M in 30-day revenue exposure** across 30K+ SKU-store series — by engineering Databricks Gold-mart pipelines (PySpark) that ingest 58M+ demand records and 6.8M+ pricing rows with end-to-end MLflow lineage.
- Cut manual supplier-risk triage by an estimated **60–70%, achieving 75–85% alert precision and 85–90% claim-grounding** accuracy, by building a freshness-aware RAG pipeline with LangGraph multi-agent orchestration across 7 live data sources and automated LLM-evaluation scoring.
- Reduced projected stockout leakage by 15–25%, by joining sales, inventory, and supplier-SKU signals into days-of-cover models driven by tool-calling agents with full MLflow experiment lineage.

DossierGraph AI | Agentic AI Company Intelligence Platform | *LangGraph, Streamlit, Pydantic* ([Link](#))

May 2026

- Cut company-research time from hours to <5 minutes, by building a **multi-step LangGraph agentic workflow (OpenAI API)** that orchestrates tool-calling across the SEC EDGAR API, web search, and financial-statement extraction into an 8-tab Streamlit executive dashboard.
- Achieved fully traceable, auditable agent outputs across all 3 analysis modes, by implementing responsible-AI guardrails (Pydantic schema validation, evidence-credibility scoring, confirmed-vs-inferred source separation) and **LangSmith-traced LLM evaluation via Pytest-based assertion suites**.

Texas Interview Intelligence Platform | *AWS Bedrock, Lambda, FastAPI, DynamoDB* ([Link](#))

Feb 2026

- Reduced interview prep time by **~95% (2–3 hrs → <10 min)** — awarded Top 5 of 200+ teams, AWS × MIS Hackathon — via a **RAG pipeline on AWS Bedrock** with ChromaDB retrieval, async inference via FastAPI, and **context window optimization & prompt caching** to cut latency by 60%.
- Deployed the platform to production for 100+ live interview-prep sessions, by architecting an event-driven microservices system (AWS Lambda, DynamoDB, S3, Amazon Textract for document intelligence) with hybrid prompting for unstructured resume and job-description parsing.

EXPERIENCE

UiPath Robotics Process Automation Pvt Ltd

Bangalore, India

Technical Product Consultant

July 2024

Jan 2024 -

- Delivered 20% efficiency gains **for 50+ Fortune-class enterprise clients across APAC/EMEA**, by architecting and forward-deploying multi-agent AI workflows in UiPath ML Suite for **10+ monthly B2B SaaS programs** with end-to-end deployment ownership
- Selected to **lead global internship branding** adopted by **500+ interns across 30+ countries**.
- Maintained SLA compliance across the client portfolio, by diagnosing data-quality issues and resolving **30+ technical incidents/month** in Salesforce, partnering directly with client product and GTM stakeholders to translate findings into operational health metrics.

Indian Institute of Technology, Kanpur

India

Artificial Intelligence Intern

2023

Kanpur,

May 2023 - July

- Achieved **97.8% predictive accuracy** on multinational **client revenue forecasting (500K+ records)** by deploying and evaluating ML models (Random Forest, XGBoost, Neural Networks) with systematic hyperparameter tuning and model fine-tuning techniques in PyTorch/TensorFlow.
- Reduced time-to-market by **10 days** by streamlining CI/CD pipelines with Docker, Kubernetes, and **MLOps** best practices, tracked via Git.

Texas A&M University – Mays IT

Station, TX

Student Technician, Data & Analytics

Mar 2025 - May 2026

College

- Ensured analytical readiness for 10,000+ Snowflake records, by building SQL-driven AI validation workflows and Agile Power BI dashboards (Advanced Excel, Power Query) used for post-deployment data-quality checks.

Internet2 Technology Evaluation Center, Texas A&M

College Station, TX

Data Analyst Intern

Oct 2024 - Dec 2024

- Secured **\$50,000+ in grant funding** and grew web traffic by 2,000+ visits/month, by serving as C-suite-to-engineering liaison while building a Python/SQL analytics pipeline, Power BI dashboards, and NLP-driven content analysis with A/B testing.

EDUCATION

Texas A&M University, Mays Business School: GPA: 3.83/4.0 | *M.S. in Management Information Systems* (May 2026) College Station, TX

SKILLS

Agentic & LLM: LangGraph, LangChain, LlamaIndex, Multi-Agent Orchestration, Tool Calling / Function Calling, Prompt Engineering, Context Window Optimization, Prompt Caching, Hybrid Prompting, Hugging Face (PEFT, LoRA, Fine-Tuning), Claude (Anthropic), OpenAI/GPT, Gemini,

RAG & Vector: RAG Architecture, Freshness-Aware RAG, ChromaDB, pgvector, Pinecone, Amazon Textract, LLM Evaluation / Evals, LangSmith, Responsible AI / AI Guardrails, Model Observability

Languages: Python (pandas, PyTorch, PySpark, scikit-learn, FastAPI, Flask), SQL (CTEs, window functions, complex joins), TypeScript, R, C++

Cloud & Infra: AWS Bedrock, Lambda, S3, DynamoDB, EC2, RDS, API Gateway, Snowflake, Docker, Kubernetes, CI/CD, MLOps, MLflow, Git

Data & BI: Databricks (Gold marts, Delta Lake), PostgreSQL, MySQL, MongoDB, ETL Pipelines, Power BI, Tableau, Salesforce

Certifications: Databricks Generative AI · Agent Evaluation on Databricks · Google Cloud Core Infrastructure · UiPath RPA Associate · PSM-1

Leadership: Top 5 of 200+ teams, AWS × MIS Hackathon · Member, Rewriting the Code (mentor, AI/CS engineers) · UiPath Global Internship Branding Lead (500+ interns, 30+ countries)

Publication: Awasthi, V., Soni, T., Awasthi, V., Singh, S. (2023). Data security in a DApp Twitter alike on Web 3.0 with blockchain based technology.
