Phoenix, AZ | divakar.tejal@gmail.com | +1(602)-888-1521 | [LinkedIn](#)

PROFESSIONAL SUMMARY

- Data Engineer with 4+ years of experience designing and optimizing scalable data pipelines, processing millions of records daily to enable data-driven decision-making across healthcare and financial domains.
- Proficient in Python and SQL, with strong expertise in ETL development, building robust data workflows that enhance data availability, quality, and system performance.
- Proven ability to design high-performance data models (star schema), reducing query runtimes by up to 40% and enabling efficient analytics for business-critical reporting.
- Hands-on experience integrating data from 10+ heterogeneous sources, ensuring consistency, reliability, and seamless data flow across distributed systems.
- Skilled in implementing automated data validation frameworks with 90%+ coverage, improving data accuracy and minimizing downstream inconsistencies.
- Experienced in building monitoring and observability solutions using Splunk and Grafana to proactively detect failures, reduce resolution time, and maintain SLA compliance.
- Strong background in developing scalable APIs and data services using FastAPI and REST, enabling secure and efficient data access for analytics and operational use cases.
- AWS Certified Data Engineer and Google Cloud Professional Data Engineer with hands-on experience in S3, Glue, Redshift, BigQuery, and Dataflow for building modern data platforms.

TECHNICAL SKILLS

- **Programming & Query Languages:** Python, SQL, Java
- **Data Engineering & ETL:** Data Pipelines, ETL Development, Data Modeling (Star Schema), Data Validation, Data Warehousing, Data Transformation (dbt)
- **Big Data & Processing:** PySpark, Apache Spark
- **Data Orchestration & Workflow:** Apache Airflow
- **Frameworks & APIs:** FastAPI, REST APIs
- **Data Processing & Tools:** Informatica, Alteryx
- **Databases & Warehousing:** PostgreSQL, MySQL, Oracle, Snowflake, BigQuery
- **Cloud & DevOps:** AWS (S3, EC2, Lambda, Glue, Redshift), GCP (BigQuery, Dataflow, Pub/Sub), Docker, Kubernetes, CI/CD
- **Streaming & Distributed Systems:** Kafka, Redis, Celery
- **Monitoring & Observability:** Splunk, Grafana, Prometheus
- **Visualization & BI:** Power BI, Tableau
- **Testing & Quality:** PyTest, JUnit, Postman
- **Version Control & Agile:** Git, Bitbucket, JIRA, Agile, Scrum

PROFESSIONAL EXPERIENCE

CommonSpirit Health – Remote, United States

Data Engineer | Jan 2025 – Present

- Designed and optimized scalable data pipelines using Python and SQL to process millions of healthcare and operational records daily, reducing reporting latency by 30% and improving data accessibility for 5+ business units.
- Developed and maintained 15+ ETL workflows using Informatica and Alteryx, integrating data from 10+ sources into centralized reporting systems and leveraging AWS services (S3, Glue) for scalable data processing.
- Designed star schema data models, reducing average query runtime by 40% and enabling high-performance reporting for finance and operations teams.
- Implemented automated data validation frameworks with 90%+ coverage, reducing downstream inconsistencies by 25% across reporting systems.
- Built Splunk-based monitoring and logging solutions to track pipeline health and proactively detect failures, reducing issue resolution time by 35% and minimizing SLA breaches.
- Partnered with data science and product teams to deliver high-quality datasets powering clinical decision-making across 3+ internal platforms.

Key Achievements:

- Improved data processing efficiency by 30% through end-to-end ETL optimization and advanced query tuning, accelerating time-to-insight for business stakeholders.
- Strengthened data reliability by implementing standardized validation frameworks, reducing data discrepancies and improving reporting trust across stakeholder groups.

Barclays – Hyderabad, India

Data Engineer | July 2020 – Dec 2022

- Developed FastAPI-based data services backed by PostgreSQL to process and validate 50K+ merchant records per cycle, improving onboarding efficiency by 40% and significantly reducing manual review efforts.
- Built scalable Python-based ingestion pipelines across 8+ financial data sources, reducing reconciliation time by 30% and enhancing the accuracy of month-end reporting.
- Designed and deployed 10+ REST APIs, enabling seamless data access for credit scoring, risk analytics, and business intelligence systems.
- Implemented near real-time data processing workflows using Celery and Redis, improving loan processing speed by 3x and supporting peak loads of 10K+ concurrent transactions.
- Developed Splunk dashboards for end-to-end pipeline monitoring and anomaly detection, enabling 40% faster issue resolution and reducing on-call escalations.
- Increased system reliability by authoring 100+ unit and integration tests using PyTest, achieving 85%+ code coverage across core data services.

Key Achievements:

- Reduced merchant onboarding delays by 40% by redesigning data validation and processing workflows, significantly improving operational efficiency.
- Enhanced system observability and stability through improved monitoring and testing practices, reducing production incidents by 30%.

EDUCATION

- **Master's in Engineering Management** | Stevens Institute of Technology | Hoboken, NJ | 01/2023 - 12/2024
- **BTech in CSE** | GVP College of Engineering | Vishakhapatnam, India | 06/2016 - 05/2020

CERTIFICATIONS

- **AWS Certified Data Engineer – Associate** | Amazon Web Services
- **Google Cloud Professional Data Engineer** | Google Cloud
