

Divya Teja Cholleti

divyatek21@gmail.com | Morrisville, NC | 571-341-0652 | [LinkedIn](#)

PROFESSIONAL SUMMARY:

Results-driven Data Engineer with expertise in data analysis, business intelligence, and automation tools. Proficient in ETL Tools, Python, SQL, Tableau, R, and Power BI, with experience in cloud technologies and Database management. Skilled at optimizing processes, enhancing user experiences, and leveraging advanced analytics for data-driven decision-making. Passionate about developing innovative solutions to improve operational efficiency and business outcomes. Strong collaborator with a proven track record of working in cross-functional teams to deliver impactful data solutions.

TECHNICAL SKILLS:

Programming Languages: Python, SQL, R, COBOL, JCL.

Data Visualization Tools: Microsoft Power BI, Tableau, Microsoft Excel.

ETL Tools: Informatica PowerCenter 10.1, Databricks(Apache Spark, Delta Lake).

Statistical Analysis: SAS, IBM SPSS.

Databases and Cloud Technologies: Db2, IMS, AWS.

Libraries: NumPy, Pandas, Matplotlib, SciPy, Scikit-learn, NLTK, Text Blob, Polyglot, ggplot2, tidyr, dplyr.

Other Tools: MS PowerApps, Microsoft Power Platform, ServiceNow, SharePoint, Jira, Miro, Monday, Visual Studio.

EXPERIENCE:

John Deere - Data Analyst II

May 2024 - Present

- Designed and optimized Databricks based ETL pipelines using PySpark and Delta Lake, to handle high volumes of product, price and sales data.
- Automated SAP workflow recovery process using Python, IMAP, and Selenium, parsing failure alerts from email, extracting errors from web UI, and re-triggering failed flows, achieving 100% reduction in manual recovery time.
- Worked with cross-functional teams (Supply Chain, Manufacturing, Pricing) to architect scalable data pipelines and develop dynamic Power BI dashboards, enhancing visibility into key metrics and improving data-driven decision-making by 28% through faster access to clean, reliable data.
- Developed a fully automated access provisioning system using Power Automate and SharePoint, incorporating dynamic approval routing, audit logging, and expiration-based cleanups—resulting in a 90% drop in redundant requests and complete elimination of manual approval checks.
- Optimized complex SQL queries, including joins, CTEs, and nested logic, significantly reducing latency and improving response times for critical business reports.
- Conducted NLP-based sentiment analysis using Python (NLTK, TextBlob) on dealer feedback to identify pain points and process inefficiencies. Findings drove a taxonomy redesign of ticket categories, creation of Power BI dashboards, and implementation of documentation and training—improving service performance by 20%.
- Migrated 15+ dashboards from Tableau to Power BI and developed advanced data models with optimized DAX calculations (e.g., rolling averages, time intelligence), enhancing report performance, user experience, and business decision-making.
- Designed Databricks jobs and workflows to orchestrate automated data transformations and validations.
- Built an end-to-end ticketing and SLA tracking system on Microsoft Power Platform, leveraging Canvas Apps, Dataverse, and Power Automate to centralize requests, enforce SLA logic, and trigger real-time escalations and notifications—resulting in 100% compliance and faster issue resolution.
- Led development of real-time inventory management solutions with the Power Platform, Power BI integrating data entry and retrieval processes across external systems to enhance operational efficiency.

UNC Chapel Hill & NCSU - Data Analyst

Oct 2023 - May 2024

- Conducted wage gap analysis by data wrangling salary datasets using Pandas and NumPy, and visualized disparities across demographics, experience, and job roles using Seaborn and Matplotlib. Applied t-tests and ANOVA via SciPy to identify statistically significant pay differences.
- Built and evaluated regression models using scikit-learn to quantify wage gaps while controlling for key variables like education and experience.
- Performed hypothesis testing and validated models using cross-validation, R-squared, and RMSE metrics.

- Revamped existing reporting workflow by integrating Paginated Reports into Power BI dashboards and implementing dynamic URL-based filtering, enabling seamless drill-through for detailed, print-ready time and absence reports. This enhanced report accessibility, reduced ticket resolution time by 20%, and significantly improved end-user satisfaction.
- Utilized Miro boards and Monday.com for project management and collaboration, enhancing communication and task tracking efficiency among team members.

Treeni - Data Analyst

May 2023 - Aug 2023

- Engineered an ESG peer benchmarking system across multiple sectors by integrating Python-based solutions with MongoDB and applying machine learning techniques to assess sustainability performance—enabling companies to benchmark their ESG metrics against the top 10 industry peers and identify areas for improvement.
- Automated data collection using Beautiful Soup to scrape ESG metrics from various sustainability websites, creating a standardized dataset to support benchmarking and performance analysis.
- Developed dynamic Power BI dashboards to visualize ESG metrics, providing clear, interactive insights to support sustainability strategy and reporting.

University of Texas at Arlington - Graduate Teaching Assistant

Jan 2022 - May 2023

- Facilitated hands-on lab sessions for two graduate classes of sixty students, highlighting the practical use of machine learning algorithms and programming techniques in Python (NumPy, Pandas, Scikit-learn) and R (ggplot2, dplyr). Enhanced student project outcomes through applied learning strategies.
- Mentored students in Python, SQL, and R, providing expert guidance on machine learning concepts like linear regression and neural networks.

TCS Pvt Ltd - Data Analyst/BI Engineer

Sept 2018 - Sept 2021

- Led development of end-to-end ETL pipelines using Informatica PowerCenter, implementing SCD Type 1 & 2 transformations and integrating data from Oracle, SQL Server, and flat files to support enterprise data warehousing.
- Designed and optimized Db2 and IMS database architectures, enhancing system performance, minimizing downtime, and ensuring efficient resource utilization through strategic use of IBM utilities such as Reorg, Runstats, and IC.
- Resolved DB2 job failures caused by database unavailability and other system issues through root cause analysis. Implemented a permanent solution using Control-M to automate this weekly maintenance, ensuring reliable job execution and preventing abends. Resulted in a 37% productivity boost and earned an internal innovation award.
- Built a Power BI Metrics dashboard integrating team performance, resource allocation, and management metrics to optimize resource planning, workload distribution, and team management. Enabled leadership to track team capacity and pressure points, improving work allocation and quarterly reviews, resulting in a 32% increase in team productivity.
- Improved application and database performance by tuning SQL queries and leveraging tools like Apptune, execution plan analysis, partitioning, and materialized views, achieving up to 25% faster query performance.
- Developed dynamic dashboards and visualizations using Power BI, Tableau Desktop/Server, and QlikView, transforming complex datasets into actionable insights to drive strategic decisions across departments.
- Published and maintained Tableau workbooks and data sources, ensuring consistency and collaboration across development and QA environments.
- Automated data processing and reporting with Excel macros, reducing manual effort by 30% and boosting overall team efficiency and accuracy.
- Streamlined service operations via ServiceNow, automating incident management, change requests, and service fulfillment workflows.
- Collaborated with architecture and application teams to understand project requirements and deliver tailored, high-quality solutions.
- Leveraged SharePoint for document workflow management, version control, and centralized team collaboration.
- Mentored junior developers on SQL tuning, ETL development, and data modeling best practices, contributing to improved code quality and team capability.

ACCOMPLISHMENTS:

- Star Award for Innovation and Leadership at Tata Consultancy Services.
- On Spot Award for demonstrating critical thinking and outstanding performance at Tata Consultancy Services.

EDUCATION:

- **Master of Science in Business Analytics** Jan 2022 - Aug 2023
The University of Texas at Arlington, Texas, USA
- **Master of Business Administration in Human Resources** May 2016 - May2018
Jawaharlal Nehru Technological University Hyderabad, India
- **Bachelor of Technology in Electrical and Electronics Engineering** May 2013 - May2017
Jawaharlal Nehru Technological University Hyderabad, India
