PROFESSIONAL SUMMARY

- Around 5 years of IT experience in RPA Analysis, Design, Developing and Testing and Implementation of business application systems.
- Worked as a RPA Developer with UI path, Blue prism and Automation Anywhere RPA tools providing expertise in creating Bots to deliver automations that provide business benefits and improve productivity.
- Expertise in Automating business processes for the clients in HR, finance, compliance teams.
- Expertise in UiPath Studio and Orchestrator.
- Experience creating ML models for training the bots using AI Fabric and extracting the data from scanned pdfs using Document Understanding and OCR.
- Experience in Design and Development of Taskbots and Metabots in Automation Anywhere.
- Integrated .NET technologies within the automation ecosystem to develop enterprise-grade API integration layers and web applications, enhancing data accessibility and interaction across platforms.
- Knowledge on IQ Bots and Document Understanding.
- Experience in automating business applications using third party applications like Oracle, SAP, PeopleSoft, etc. in various domains.
- Good understanding of various reusable components and features of Automation Anywhere and UiPath.
- Expertise in using C# & .net for implementing business logic.
- Knowledge on various components of AWS- Amazon Workspaces, EC2 instances and VPC.
- Proficiency in configuring and deploying Web/Enterprise applications and services on IIS 6.0/7.0 servers.
- Extensive experience in designing and developing bots to automate PDF-related business processes across various functional areas, including document management, reporting, and compliance.
- Skilled in implementing Optical Character Recognition (OCR) solutions using RPA tools like UiPath and Automation Anywhere to extract data from scanned documents, images, and PDFs, enhancing data extraction accuracy and efficiency.
- Proficient in writing Python scripts for automation tasks, enhancing efficiency and reducing manual efforts in various projects
- Demonstrated expertise in developing bots to automate Excel-based processes across various business domains, including finance, HR, and compliance.
- Expertise in automating web-based and desktop applications using RPA tools like UiPath, Blue Prism, and Automation Anywhere, enabling end-to-end automation of business

processes.

- Proficiency in using Python libraries like Matplotlib and Seaborn to create interactive visualizations and dashboards, facilitating data-driven insights and decision-making.
- killed in web scraping using Python frameworks like BeautifulSoup and Scrapy to extract data from websites and APIs, facilitating data collection and analysis for business requirements.
- Experience in designing and developing bots to interact with web browsers, web forms, and desktop applications, streamlining repetitive tasks and improving productivity.
- Experience in using Agile and SCRUM methodology to deliver the projects.
- Expertise in scripting languages like JavaScript, VBScript.
- Highly motivated team player with zeal to quickly learn and implement new technologies.

CERTIFICATIONS:

- Certified UiPath Professional
- Automation Anywhere Developer.

TECHNICAL SKILLS

Operating System: Windows XP Professional/ 2007/10 Server, UNIX.

RPA Technologies: Automation Anywhere, UiPath, Blue prism, Power Automate

Cloud: Amazon Web Services, Azure, REST API, JSON

Programming Languages: C# and .NET

Web Technologies: XML, HTML, Java Script, CSS, VBScript

Tools: TFS, Visual Studio 2010/2013, SQL Server Management Studio Express, GIT.

Scripting Languages: Java Script, VB Script, VB Macros, Python

Intelligent Automation: UiPath, AI Fabric, OCR, Document Understanding

PROFESSIONAL EXPERIENCE

Company Name: Veriforce – Remote – Chicago

Designation: RPA Developer and Migration Support Analyst

July 2022 – Present

Responsibilities:

- Analyzed the Automation Anywhere's AA360 platform with existing documentation of processes.
- Prepared a high-level design to migrate the processes from AA 360 to UiPath.
- Supported the previous Automation Anywhere bots in production.
- Developed the new process in UiPath as per the SDD.
- Mapping the functionalities and features of AA360 with the equivalent or similar ones in UiPath to ensure a smooth transition.
- Implemented governance and compliance protocols to ensure the seamless integration of Automation Anywhere AA360 and UiPath within the organization's regulatory framework.
- Collaborated with stakeholders to understand the requirements and constraints of integrating AA360 into the current automation ecosystem.

- Developed connectors or adapters to facilitate seamless communication between UiPath and AA360 components.
- Implemented Python-based web scraping scripts using frameworks like BeautifulSoup and Scrapy to extract data from websites and APIs, facilitating data collection for analysis and reporting purposes.
- Conducted testing and validation to ensure the accuracy and efficiency of integrated workflows.
- Implemented Azure services for data storage, processing, and analysis, enabling comprehensive reporting and analytics functionalities within the automation ecosystem.
- Leading the migration process from legacy automation systems or older versions of UiPath to the latest version or a unified UiPath platform.
- Assessing the existing automation landscape to identify areas for migration and improvement.
- Developed and implemented PDF automation solutions using UiPath to extract, manipulate, and process data from PDF documents.
- Utilized UiPath's PDF activities to automate tasks such as reading text, extracting specific information, and generating PDF reports.
- Developed migration strategies and plans, including data migration, code migration, and process re-engineering.
- Utilized .NET frameworks in conjunction with Azure for developing robust monitoring and reporting mechanisms, enabling real-time tracking of performance and efficiency metrics.
- Used Python scripts in conjunction with version control systems like Git and GitHub to manage code repositories, facilitating collaboration and ensuring code integrity throughout the project lifecycle.
- Collaborated with development teams to refactor existing bots and workflows to align with UiPath best practices and standards.
-
- Provided training and support to users and stakeholders on the new features and functionalities introduced by the migrated UiPath platform.
- Ensuring minimal disruption to ongoing business operations during the migration process.
- Leveraged Python frameworks like Django or Flask to develop web applications and APIs for internal use, enabling seamless data access and interaction across different platforms.
- Conducted post-migration reviews and optimizations to enhance the performance and scalability of the automation ecosystem.
- Hands on experience in developing enterprise grade API integration layer, web application using .net technologies with C#, ASP.Net.
- Implemented robust monitoring and reporting mechanisms to track the performance and efficiency of integrated workflows in real-time.
- Integrated logging and analytics tools to generate comprehensive reports on automation outcomes, allowing stakeholders to make data-driven decisions and continuously optimize processes for maximum efficiency.

Company Name: – Lewis University - Chicago

Designation: Automation Analyst – Power Automate

Jan-2022 to June-2022

Responsibilities:

- Implemented POC power automate and power apps automations.
- Developed and maintained regular Power Automate flows that execute at specified intervals to export and track all bank transactions, ensuring accurate and up-to-date transactional information.
- Developed Python scripts to manipulate and preprocess data before importing it into Power Automate, ensuring data accuracy and consistency across automated workflows.
- Applied extensive experience in writing Power Automate flows, leveraging its capabilities for efficient data handling and integration with SQL Server and Oracle databases.
- Implemented Power Automate and RPA solutions, aligning with the SDLC (Systems Development Life Cycle) and the requirement management lifecycle.
- Demonstrated expertise in full life cycle analytics and system integration engagements, addressing complex challenges through collaboration with cross-functional teams.
- Prioritized strategic and tactical rollout of Power Automate solutions, creating and documenting test procedures for pre-UAT phases, and providing support during UAT and rollout phases.
- Employed Azure's cloud capabilities to facilitate seamless data integration and communication between automation workflows and external systems, enhancing overall workflow efficiency.
- Utilized Python libraries such as pandas and numpy to perform advanced data analysis and transformation tasks, enhancing the capabilities of Power Automate in handling complex data structures.
- Conducted comprehensive testing and validation of PDF, OCR, Excel, web, and desktop automation workflows developed within Power Automate.
- Developed Power Automate flows to read/write data to Excel files, perform calculations, format spreadsheets, and automate repetitive Excel-based processes.
- Collaborated with test teams during product test and UAT phases to identify and fully resolve bugs and issues, ensuring the reliability of Power Automate workflows.
- Implemented complex stored procedures, triggers, functions, views, indexes, and joins to enhance Power Automate workflows.
- Integrated Optical Character Recognition (OCR) capabilities into Power Automate workflows to extract text and data from scanned documents, images, and PDFs containing non-searchable text.
- Leveraged Python scripts to extract data from various sources, including Excel files, databases, and APIs, and parse it into formats compatible with Power Automate, facilitating seamless data integration into automated processes.
- Utilized Power Automate Desktop to automate tasks within desktop applications, including data entry, application navigation, and report generation, improving operational efficiency.
- Implemented Python scripts to handle errors and exceptions within Power Automate workflows, ensuring robust error handling mechanisms and improving the reliability of automated processes.
- Efficiently staged and deployed Power Automate solutions into test and live environments, handling monitoring and troubleshooting processes.
- Implemented end-to-end Robotic Process Automation (RPA) with Power Automate, identifying opportunities to automate manual tasks and establishing a commercial-wide RPA program, delivering the first software bot in production.

Company: HSBC Global IT Services– Hyderabad

Designation: Software UiPath Developer – RPA

Aug-2019 to Nov-2021

Responsibilities:

- Contributed to the Center of Excellence (COE) team utilizing UiPath for multiple business units within the banking domain.
- Automated tasks involving logging into websites, searching websites, submitting web forms, and updating records on banking websites.
- Collaborated with business analysts on AS-IS process documentation and prepared Solution Design Documents (SDD) for TO-BE processes, incorporating error handling concepts and variable descriptions for efficient production control.
- Created custom Python functions to extend the functionality of UiPath workflows, enabling tasks such as data validation, text parsing, and complex calculations within the banking automation processes.
- Utilized UiPath's desktop automation capabilities to automate tasks within banking desktop applications, including data entry, application navigation, and report generation, improving operational efficiency.
- Applied skills in Citrix application development, ensuring seamless integration with UiPath to automate processes within the banking environment.
- Deployed automated processes in UiPath Orchestrator and scheduled their execution for optimal efficiency in banking operations.
- Utilized UiPath's PDF activities to automate tasks such as reading text, extracting specific information, and generating PDF reports for banking processes.
- Quickly responded to and analyzed issues posted by clients, ensuring timely resolution.
- Gathered and understood banking requirements, translating business logic into effective automation workflows.
- Configured UiPath's OCR engines (such as Google Cloud Vision OCR, Microsoft OCR, or Abbyy OCR) to accurately recognize and extract text from various banking documents.
- Created mapping documents for the flows of banking applications, ensuring a comprehensive understanding of the automation landscape.
- Provided ongoing support for production issues related to UiPath automation in the banking sector.
- Implemented Python scripts to handle errors and exceptions within UiPath workflows, ensuring robust error handling mechanisms and improving the reliability of automated processes in the banking sector.
- Utilized Data Scraping methods to extract structured data from browser applications or documents, facilitating efficient data handling in CSV files or Excel spreadsheets within the banking context.
- Actively participated in the deployment of RPA solutions into banking production environments.

EDUCATION

Masters In Business Analytics in Lewis University.

Bachelors in Sciences in MallaReddy University.
