U.S. Citizen

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 4+ years of experience building and modernizing enterprise-scale distributed systems. Proven track record leading software projects from design through implementation, coordinating cross-functional teams, and delivering secure, scalable solutions using Java, Spring Boot, and modern frontend frameworks. Experienced in leveraging AI-assisted development tools to enhance code quality and accelerate delivery. Strong technical communicator with background in computational physics and data analysis.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot 3.5, Spring Security, Hibernate, Python, JavaScript/TypeScript, Vue.js, React

Cloud & DevOps: Docker, Kubernetes-ready containerization, Redis, Nginx, CI/CD pipelines, Micrometer metrics

Databases & Systems: MySQL, AS400/DB2, IBM i, HikariCP connection pooling, REST APIs, Manhattan WMS integration

Security: JWT authentication, Spring Security, rate limiting, password hashing, secure API design

AI & Tools: Claude AI for development assistance, prompt engineering, AI-assisted code review and documentation

PROFESSIONAL EXPERIENCE

Bass Pro Shops

October 2025 – Present

Technical Service Desk Analyst | Springfield, MO

- Provide technical support and troubleshooting for enterprise applications and systems, explaining complex technical solutions to non-technical users daily
- Diagnose and resolve software, hardware, and network issues using systematic problem-solving approaches
- Document technical solutions and create knowledge base articles for common issues

O'Reilly Auto Parts

January 2022 – April 2025

Software Engineer – Inventory Control Team | Remote

Hours per week: 40+

Project Leadership & Coordination:

- Led end-to-end development of 3 major web applications: 1 new inventory management system and 2 complete legacy application rewrites, coordinating with cross-functional teams including QA, DevOps, and business stakeholders
- Coordinated Workday systems integration across multiple teams, ensuring smooth transition from legacy HR systems while maintaining data integrity across inventory management programs
- Created comprehensive technical specifications, user guides, and documentation for all projects; presented demos and training to technical and non-technical stakeholders

Technical Implementation & Problem Solving:

- Architected and implemented migration from IBM i (AS400) legacy systems to modern Java/Spring Boot applications integrated with Manhattan WMS pipelines, saving 50+ hours per week in manual processing across multiple distribution warehouses
- Developed custom Java encoder/decoder to resolve character encoding incompatibilities between AS400 systems and AG-Grid frontend components, enabling seamless data display for warehouse operations
- Modernized legacy jQuery applications to Vue.js framework with AG-Grid tables, significantly improving load times, user experience, and maintainability
- Implemented Spring Security authentication, secure API design, and data protection measures across all developed applications

Tyson Foods

May 2019 – May 2022

Complex Intern – Operations & Data Analysis | Dexter, MO

Hours per week: 40

Project Leadership:

- Led complete overhaul of plant safety training documentation and delivery systems, improving compliance tracking and employee onboarding efficiency
- Redesigned data intake and reporting systems by introducing automation processes, streamlining submission to AgriStats industry benchmarking
- Performed Operations Associate and supervisory duties including team coordination, data entry management, and quality assurance for plant statistics reporting

Data Analysis & Technical Communication:

- Collected, analyzed, and presented operational data to plant management, translating complex metrics into actionable insights
- Managed accuracy and integrity of production data inputs, ensuring proper feedback loops for continuous improvement

TECHNICAL PROJECTS

Dragons Den – Full-Stack Web Application (*dragons-den.net*)

- Designed and deployed production Spring Boot 3.5/React application featuring JWT authentication, rate limiting, and comprehensive security measures
- Containerized application using Docker and Docker Compose for scalable, reproducible deployments
- Integrated Redis caching for performance optimization and Micrometer metrics for application monitoring
- Continuously evolving platform used for testing new technologies, frameworks, and development practices

EDUCATION

Missouri State University

2018 – 2022

Coursework toward B.S. Applied Physics, B.S. Mathematics, Computer Science Minor

Completed 4 years of study; departed to accept full-time Software Developer position at O'Reilly Auto Parts

Relevant Coursework:

- Computational Physics: Python programming for physics simulations and numerical analysis
- Advanced Statistical Analysis: R programming for statistical modeling and data analysis
- Introduction to Web Development: Foundation for full-stack development career

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

IBM Certifications (2025): Introduction to Software Engineering, Java Programming for Beginners

In Progress:

- IBM Java Developer Professional Certificate (Coursera)
- IBM Generative AI for Java and Spring Developers
- Microsoft Back-End Developer Professional Certificate
- C# Programming for Unity Game Development
