Education

Brandeis University | Dean's List

May 2025

Bachelor of Science in Computer Science / Minor in Mathematics

Experience

Software Engineer Intern

Jan 2025 – May 2025

myGenius

Remote

- Raised creator satisfaction by 25% and cut draft-to-publish time by building LLM-driven content generation and real-time preview in TypeScript/React/Next.js with Python/FastAPI services.
- Reduced content-sync errors and data mismatches by designing idempotent REST APIs with schema validation and background workers; added structured logging and error tracking for faster debugging.
- Increased release cadence to weekly by containerizing services with Docker and implementing GitHub Actions CI/CD (lint/unit tests/build cache) plus standardized PR specs/reviews.

ITS Student Manager

Aug 2023 – May 2025

Brandeis ITS Help Desk

Waltham, MA

- Improved first-response SLAs across 250+ tickets by scripting Bash diagnostics and automated remediations for Linux/macOS/Windows endpoints.
- Lowered repeat tickets and raised resolution consistency by standardizing triage workflows and publishing KB runbooks; mentored technicians on escalation and root-cause analysis.

Head Teaching Assistant

Mar 2023 – June 2024

Brandeis University

Waltham, MA

- Supported **100+ students in Python and Discrete Mathematics** and sped up feedback turnaround by leading weekly sessions, authoring assignments, and building autograding checks.

Software Engineer Intern

May 2023 – Sep 2023

Peachy

Remote, New York

- Cut merchant onboarding time 35% with 99.9% data accuracy by automating Shopify migration + QA pipelines in Node/Express + PostgreSQL with validation, checksums, and retry logic.
- Enhanced UX for 10,000+ daily users by shipping React features (state management, pagination, input validation) and translating CX/growth feedback into roadmap tickets.
- Shortened time-to-production by owning E2E delivery—API contracts, code reviews, Docker containerization, and monitoring/alerts for production issues.

Projects

Food Suggestion App (Wh't's Ckin?) | *Python, Javascript, Typescript, React Native, React.js, Hugging Face, MySQL* |

- Developed a cross-platform mobile app in React Native that identifies food items from user-uploaded photos and suggests new recipe ideas tailored to user preferences such as calorie goals or budget constraints.
- Integrated Hugging Face datasets for food image recognition, enabling accurate identification of ingredients from photographs.
- Designed and implemented a custom Python-based recommendation algorithm to generate creative, goal-oriented meal suggestions by analyzing user inputs and available ingredients.

Website Cloning | *Python, Typescript, Next.JS, FastAPI, Gemini LLM, Hyperbrowser* |

- Built an AI-driven “Website Cloner” that ingests any public URL, scrapes its DOM, CSS, assets, and outputs a clean, component-based HTML codebase with 80% pixel fidelity—shrinking front-end rebuild time from hours to minutes.
- Developed a Python/FastAPI service that uses HyperBrowser to grab a page’s HTML, CSS, images, and organization in under 3’s and pipes that data to Gemini.
- Utilized Gemini LLM to turn scraped DOM and CSS into HTML replicas, giving me my first hands-on experience with prompt-engineering and igniting a deeper interest in generative AI for web development.

PDF Reader | *Javascript, Typescript, React, Tailwind CSS, Python* |

- Developed an AI PDF Reader that processes documents, extracts content, and generates detailed summaries with chapter breakdowns.
- Utilized NLP algorithms to identify chapter boundaries and extract key points for improved content comprehension.

Technical Skills

Programing Languages: JavaScript | TypeScript | Python | Java | HTML/CSS | C | Go

Frameworks/Libraries: React, Next.js | React Native | Node.js/Express | FastAPI | Flask | Liquid

Data/Storage: PostgreSQL | MySQL | MongoDB | AWS S3

Systems/Cloud: Linux/Unix | Docker | GitHub Actions | REST APIs | CI/CD | OAuth/JWT

Tools: Git/GitHub, Jira, Notion, VS Code, Bash/Zsh
